Summary

With over 6+ years of expertise in automotive development, notably at Mercedes Benz, I excel in C++, AUTOSAR, ADAS systems, and collaborative problem-solving. My achievements include pioneering AUTOSAR Compliant NCD design for Mercedes Benz, enhancing in-vehicle networking with a focus on efficiency and innovation.

Work Experience

Mercedes Benz Research and Development India, Bangalore (Client) Payroll: LANCESOFT-INDIA PVT LTD - Bangalore | Bangalore

Lead Software Developer, | 04/2023 - 01/2025

Currently working in the team responsible for AUTOSAR Compliant NCD (Network Communication Description) design for In-Vehicle Networking over CAN, CAN FD, Flexray and Ethernet network.

Key responsibilities:

- Worked with XDIS tool for configuration and C++ for integration • Configuration of COM stack related parameters.
- Implementing the changes for ECUs and Networks after careful analysis of criteria like busload, buffer consumption, routing path and the effects on the existing system.
- Generation of ECU ARXML and Network ARXML/LDF.

Innavior Technologies | Banagalore

Autosar Developer | 09/2018 - 03/2023

Experienced in BSW COMSTACK module configuration using Davinci configurator.

Key Responsibilities

- Integration and Testing using C++.
- Analyzing the requirements to configure the PDU
- Building the application in Gitbash & flashing the ELF files through WINIDEA
- Analysing the log files in CANOE

Projects

Digital Light Projection (DLP)- MBOS 1.0 (July 2023 to Nov 2024)

- Analyzed the requirements for the PXL, PHD (Light ECUs) from the suppliers
- Worked on the End to End protection system and On-board secure communication compatibility for the new light system.
- Configured all the Parameters for the transmission from SMPC (camera ECU) to Light ECUs through Networks Ethernet and CAN FD via Gateway ECU
- Creating the SWC Interfaces containing Multiple record datatypes at application level.
- ARXML extract verification and analysis to check the proper implementation of requirement.

□ **Key Areas worked : XDIS, Canoe, C++, Embedded C.**

ABS (Anti-lock braking system) (Aug 2021 - Nov 2022)

Anti-Lock Braking System (ABS) is used in advanced automobiles to prevent slip and locking of wheel after breaks applied. It is an automobile safety system, the controller is provided to control the necessary torque to maintain optimum slip ratio.

□ **Key Areas worked : Davinci configurator, Canoe, C++, Embedded C**

Electronic Break Force Distribution (Feb 2019 - Sep 2020)

Electronic Break Force Distribution (EBFD) or Electronic Break force Limitation (EBL) is an automobile break force technology that varies the amount of force applied to each of the vehicle's brakes, based on road condition, speed, loading.

□ Key Areas worked : Davinici configurator, Canoe,C++, Embedded C.

Technical Skills

- Expert level skills in C and C++.
- Practical Experience with ADAS Systems and AUTOSAR Design
- Hands on Experience on BSW, RTE, Application layer of AUTOSAR
- Hands on experience on CAN,Ethernet, Flexray protocols.
- Working knowledge on E2E-Safety system and SecOc-security system.
- Working experience of embedded Real Time Operating systems (RTOS)
- Proficient in XDIS (OEM Tool),Canoe, Davinici configurator
- Good knowledge on Unified Diagnostic Services (UDS) Protocol.

Education

National Institute of Technology, Warangal

Bachelor of Technology(B.Tech)- 2008

Languages

English, Hindi, Telugu

Key skills	Ratings
C++	4 Years of exp in integration using C++
Embedded Firmware	6+ Years in automotive domain- excel in C++, Autosar and ADAS System
