Career Objective:

Seeking a management position in a progressive organization which will allow me to contribute the value of my diverse managerial and business skills while offering me a challenging environment of opportunity and growth.

Profile Summary:

- Having 5 years of experience in the IT Industry and as **Software engineer** having experience in various environments and tools.
- Experience in Creating Jenkins work flow to automate the environment readiness process across different environments like **Dev, QA & Prod**.
- Hands-on experience to setup, configure continuous Integration and Delivery processes using **Jenkins**.
- Experience with Software Version Control systems like **GIT, GITHUB**, such as branching, merging, merge conflicts, repositories creation.
- Experience in managing services hosted on **AWS-EC2** instances, **VPC, Auto Scaling groups, security groups, EBS, ELB, ECS, EKS, ECR, Cloud watch, SNS, S3, Route 53, RDS** and **IAM** account management.
- Build various base **Docker images** with prerequisite software for application deployment and published these standard base images to Private **Docker Hub** and **AWS ECR repository**.
- Worked on creating the **Docker containers, Docker container images**, tagging, and pushing the images and Docker consoles for managing the application life cycle.
- Experience in setting up a **Kubernetes cluster** on **AWS EKS** and deploying microservices-based applications using **Jenkins pipeline**.
- Experience in setting up the build and deployment automation for **Terraform** scripts using Jenkins.
- Experience in Configuring and Integrating the Servers with different environments to automatically provision and create new machines using Configuration management/provisioning tools like **Ansible**.
- Coordinated all build and release activities and ensured that the release process is well documented.
- Experience in SDLC methodologies such as Agile and using bug tracking systems like **JIRA**.
- Actively participated in daily SCRUM meetings and perform daily risk analysis of backlog.

Technical Skills:

Cloud Technologies	: AWS Cloud Watch, Terraform
Operating Systems	: LINUX, Windows Server Platforms
Scripting languages	: Shell scripting, Python, Groovy
Devops Tools:	: Jenkins, Docker, Ansible
Container orchestration	: Kubernetes, Docker
Virtualizations	: VMWARE ESXI, VMWAREWORKSTATION.
Source code version control tool	: GIT, perforce
Application Servers	: Tomcat, Jboss, and WebLogic.

CERTIFICATIONS

Certified Kubernetes Administration in Linux Foundation.

Work Experience:

Worked as a DevOps engineer in Amdocs from Aug2021 to June2024.

Education:

B. Tech: Anantha Lakshmi Engineering college 2019

Project Experience:

Client: SUNRISE

Responsibilities:

- Implemented & maintained the branching and build/release strategies utilizing GIT.
- Responsible for managing, configuring and installing required plug-ins in Jenkins for Continuous integration.
- Installed Jenkins on a Linux machine and created a master and slave configuration to implement multiple parallel builds.
- Build various base Docker images with prerequisite software for application deployment and publish these standard base images to Private Docker Hub and AWS ECR repository.
- Deployed microservices-based applications by creating the required Docker containers.

- Created Kubernetes cluster on AWS EKS using Terraform and deployed a microservice-based application using Jenkins pipeline.
- Creating AMI images from existing instances and copy the different regions/availability zones.
- VPC-Creating Instances in VPC, assigning subnets and Elastic IP s network, Creating Nat Gateways using Elastic IP. Creating Internet Gateway, Route Tables for subnets.
- Launching NAT instances with in VPC to provide intern method database/secure instances.
- Creating new EBS volumes and attaching the same to EC2 instances when needed.
- Experience on S3 to create the buckets for storing objects and changing permissions on buckets/objects.
- Backing up the EC2 instance volumes by creating a snapshot and saving them in S3 buckets for Disaster Recovery.
- Taking instance backups as Amazon Machine Image (AMI) and launching these when we need similar servers.
- Managingloadandinstancefailuresthroughautoscalingandlaunchconfiguration.
- Handling multiple requests in IAM roles like creating users' groups and roles and adding policies to create/modify policies according to the user's access requirement.
- Enablingautomatedbackupsand Multi-AZ to improve at a base performance on RDS.
- Coordinated with IT groups on the release timings to ensure systems are ready for the code to be deployed.
- Implementing QA and Prod deployment plans and preparing release notes.

Project:

Client: BELLCANADA

Role: DevOps Engineer

Responsibilities:

- Linux/Windows/Ubuntu servers on Amazon EC2 & monitor through SNS and Amazon CloudWatch.
- creating/ manging AMI/Snapshots/Volumes, Upgrade/downgrade AWS resources (CPU, Memory, EBS). Setup/Manage Databases on Amazon RDS.
- Used Ansible to do configuration and to automate deployments.
- WorkedoncreatingK8Sclusterfromendtoend.
- Manage and configure AWS services as per the business needs ELB, Route53, S3, CloudWatch, IAM, VPCin Global infra.
- HandlingL1andL2 level issues, involved in the client calls, done several deployments, resolving the tickets.
- Worked on Prod Creation and managing Containers.
- Implemented continuous delivery pipeline involving Jenkins Ansible to complete the automation.
- Assisted developers with establishing and applying appropriate branching, labelling convection's using Git source.
- Implemented and supported process via Jenkins.

- Administrated and Implemented CI tools Jenkins for automated builds and also integrating Unit tests and Code Quality
- Involved in creation of virtual machine and infrastructure in AWS cloud environment.
- Virtual Machine creation using AWS and AZURE.
- Maintaining SCM branching and merging.
- Updating different software and tools.
- Assistance and training on source code management processes, procedures and tools.
- Creation of build and its deployment to customers non prod and prod environments.
- Performed applications conversion, configuration and release deployment duties.
- CI configuration and automation using Jenkins.
- Managing virtual machines on VMware.
- Integration of multiple Amdocs products using shell script.
- Utilized for streamlined Configuration Management, optimizing the deployment process.
- Installed, configured, and maintained Jenkins for seamless continuous integration (CI) and End-to-End automation of build and deployments.

Work experience:

Worked as **DevOps Engineer** at HOL Info solutions Pvt. Ltd, Pune from May **2019-2021**

DSM

DEVOPS/Cloud ENGINEER

Responsibilities:

- Worked on Aws **Cloud Based technologies** in **monitoring environments** and **Linux environment**.
- Experience **with Graylog** and **logic monitor** in launch and creating the **configurations** to **automate** repeatable provisioning of **AWS** resources for applications in usage with **DevOps**.
- Experience in **Site Reliability**.
- Managing the configurations of multiple servers using **Ansible**.
- Experience with **continuous integration, deployment, version management, source code management and environment management, supporting the Software Release Management and procedure**.

- Installed **Gray log** (which includes **MongoDB** and **Elastic Search**) and configured a **centralized log management server**. Monitor all critical logs from our production and performance environments and generate alerts based on **log entries**. Integrated **Gray log** to **Vim** which receives alerts and notifies members within the operation team of outages.
- Installed and configured **JBoss6.0** on different environments like **Dev, QA, UAT** and **Production**.
- Experience in User Management and **Plug-in Management for Jenkins**.
- Experience in **symmetric** to identify the **symmetric files** from **instances** and **configuring** with **ansible play-books** all the stuff sending it to **Gray log**.
- Ability to decompose complex systems and discover failure scenarios.
- **Linux** (Debian/Ubuntu).
- **MVN Web Frame works** (including Ruby on Rails, Django, Phoenix).
- Webservers (**Apache or Nginx**).
- Relational Databases (**PostgreSQL** or **MySQL**).
- Experienced in **Cloud automation** using **AWS Cloud Formation templates**. Hands on experience in deploying the content **cloud platform** on **Amazon AWS** using **EC2, S3, and EBS**.

HSBC

Azure DevOpsEngineer

Responsibilities: -

- Utilized **Kubernetes** service to deploy a managed **Kubernetes cluster** in **Azure** and created an **AKS cluster** in the **Azure portal**.
- Involved in creating docker images and push the to azure Container registry and configured Azure Kubernetes services (**AKS**) involved in configuring the Pipelines by using Azure DevOps utility and created new branches and pipelines as per requirements.
- Building and Installing server through **Azure Resource Manager Templates** or **Azure Portal**.
- Migrated moderate workloads from on premise to **Azure** Published web services API using **Azure API** management service.
- Major focus on **Configuration, SCM, Build/Release Management, Infrastructure as a code (IAC)** and as **Azure DevOps** operations Production and cross platform environments.
- Implement the best practices for **DevOps methodology** and **Agile** project management.

- Wrote playbooks, roles to install application in windows core servers. Used packer to create both core and GUI windows templates in **VMware**.
- Wrote python scripts to automate tasks to automated daily tasks.
- Wrote Power Shell scripts to Monitor services on windows servers to calculate the uptime. Worked on existing PowerShell modules to enhance functionality.
- Utilized **Kubernetes** service to deploy a managed **Kubernetes cluster** in **Azure** and created an **AKS cluster** in the **Azure portal**.
- Experience with Active Directory configuration using Ansible in windows servers, updated certificates in 1000+ servers using Ansible.
- Worked on Azure services such as VMs, Content delivery networks, Azure storage, Azure MySQL, and Virtual networks.
- For **Docker** and **Kubernetes** blueprints on **Cloudify** manager, console and **Kubernetes cluster**.
- Support developer on ongoing issues in development process and infrastructure along with any issues related to **CI/CD** process for web application.
- Involved in creation of virtual machines and infrastructure in the **Azure Cloud** environment.

Declaration: I hereby declare that the above-mentioned information is correct to my knowledge and I bear that responsibility for the correctness of the above-mentioned particulars.

Place: Hyderabad.
