Professional Summary

- Having 5+ years of experience in DevOps engineer in build engineering and release management Process, building and deploying applications by adopting DevOps practices such as Continuous development, Continuous Integration (CI) and Continuous Deployment (CD) in runtime with various tools like Git, Maven, Jenkins, Docker, Kubernetes and managing cloud services with AWS.
- Extensively worked with Version Control Systems GIT Branching, Merging and user group permissions and implemented Branching Strategies (In GIT).
- Experience in implementing Continuous Integration and deployment using various CI Tools like Jenkins.
- Good understanding and experience in building CI/CD pipelines using groovy and DSL languages automation tools like Jenkins.
- Integrate Nexus to Jenkins and push the artifacts to Nexus Repository.
- Experience in integrating SonarQube with POM.xml for code Quality Analysis and generating the code quality reports.
- Experienced in deploying JAR, and WAR in Tomcat Application Servers in Linux/Windows Environments.
- Good Experience on Containerized platforms like Docker.
- Familiar with writing Docker Files, building Docker Images and running the Docker Containers.
- Managing the creation, deployment and monitoring for Docker Containers using Orchestration frameworks like Kubernetes.
- Good Experience on the Kubernetes cluster and writing the manifest files and service files.
- Launching EC2(AWS) cloud AMI's(Linux/Centos) and configuring the servers for specified applications
- Worked on Multiple AWS instances, set the security groups, Elastic Load Balancer and AMIs, Auto scaling to design cost effective, fault tolerant and highly available systems.
- Experience with Configuration Management automation tool Ansible and has worked on integrating Ansible YAML Scripts.
- Good experience in Shell Scripts and python to automate the tasks.
- Strong ability to troubleshoot any issues generated while building, deploying and in production support.
- Experience on software development life cycle (SDLC) with software development models like Agile, JIRA.

- Automated configuration updates on Linux servers using Python scripts in combination with Ansible playbooks.
 - Experience in Monitoring Tools like Prometheus, Grafana.
 - Expertise in Deploying, Maintaining, Managing and Troubleshooting of multiple applications running on Linux and Windows based distributed Infrastructure.
 - Worked as linux administrator(Installation, configuration, maintenance,firewalls,creating, modifying, and deleting users)
 - Having knowledge about File system management (mounting, partitioning, LVM, RAID setup).
 - Self-motivated and very quick in learning new technologies and able to manage time effectively, work under deadlines, do multi-task, plan, organize and prioritize work assignments.
-

Technical Skills

- **Operating Systems:** Linux (Ubuntu, RHEL)
 - **Version Control:** Git, GitHub
 - **Scripting:** Shell Scripting, Python, YAML
 - **Build Tools:** Maven
 - **Application/Web Servers:** Tomcat
 - **Artifact Repository:** Nexus
 - **Code Quality Tools:** SonarQube
 - **Continuous Integration:** Jenkins
 - **Containerization:** Docker
 - **Container Orchestration:** Kubernetes
 - **Monitoring Tools:** Prometheus, Grafana
 - **Cloud Services:** AWS (EC2, S3, ELB, Auto Scaling, VPC, Route 53, CloudWatch, CloudTrail)
 - **Infrastructure as Code (IAC):** Terraform
 - **Project Management & Ticketing:** Jira
 - **Linux Administration**
-

Professional Experience

System Engineer II

Firstcry.com, Bangalore | September 2019 – Present

Project 1 : Shipping Automation

Environment: Git, Maven, Jenkins, SonarQube, Nexus, Docker, Kubernetes, AWS, Terraform, Python and Groovy

Roles & Responsibilities:

- Devops workflow representing all stages starting from SCM commit Build, Integration Build which compile code, unit test cases and code coverage, Build and bundle and deployment in artifacts.
- Launching Amazon EC2 cloud instances using Amazon Web Services (Linux//RHEL) and configuring launched instances with respect to specific applications.
- Installed application on AWS EC2 instance and configured the storage on S3 buckets.
- Worked on AWS services such as setting up new server(EC2) instance/services in Aws, configuring security groups, and setting up Elastic IP's, auto-scaling configuration.
- Designed AWS cloud formation templates to create custom size VPC, Subnets, NAT to ensure successful deployment for web applications and database templates.
- Involved in installing Jenkins on a Linux Machine and creating a Master and Slave Configuration to implement multiple parallel builds through a build. Checks,ensuring high coding standards.
- Integrated SonarQube for code quality
- Configured the Nexus artifactory repository with Jenkins.
- build CI/CD pipelines using groovy and DSL languages automation tools like Jenkins.
- Migrating the Jenkins into Docker container to reduce the sever down time and improve the scalability.
- Worked with Docker containers which are lightweight and fast for reducing the cycle time of development, testing, and deployment.
- Creating the docker images and tagged them push that images into docker Repository.
- Download/Installed Docker images from Docker hub using Docker pull Down Professional summary for Docker.
- Responsible for writing the Manifest and Service like Replication Controller and Replication set.
- Involved in the release process and Deployed applications in Kubernetes Cluster.
- Used Jira to track issues and change management
- Worked on Daemon sets, Cron job and Job.
- Monitor the pods memory, CPU, container restart count, logs in Grafhana, will take action if any issues found
- Automated Docker container deployments and Kubernetes pod monitoring using custom Python scripts.
- Automated configuration updates on Linux servers using Python scripts in combination with Ansible playbooks.

Project 2 : Manifest Invoice Generator (MIG)

Environment : Linux, Git, Nexus, Jenkins, Maven, SonarQube

Roles & Responsibilities:

- Created release branches in GIT by GIT Administration including branching, reporting.
- Created Git Repositories and specified branching strategies that best fitted the needs for the client.
- Responsible for implementation of scheduled Builds using Jenkins includes installation of Jenkins, Configuration of Jobs for automated Build and deployments.
- Used various Jenkins plugins like Deploy to container plugin, SSH agent plugin, sonar scanner, parameterized build plugin.
- Configuring the mail to the Jenkins jobs for build alerts.
- Administration and creation of Individual Jenkins jobs, including automatic generation, reporting and alerting of build failures.
- Monitor and fix the continuous integration builds running in Jenkins.
- Developed build scripts using maven as the build tools for the creation of build artifacts like jar, war or ear files.
- Implemented SonarQube for code quality check and Nexus repository and integrated them into Jenkins to achieve Continuous Integration.
- Configured the Nexus Artifactory repo with Jenkins and Configured the Jenkins with GitHub repository.
- Primary responsibilities include Build and Deployment of the java application onto different Environments like QA, UAT, pre-Prod and prod.
- Managing all phases of Build and Release activities and deployment.
- Deployed the java applications into web servers like Apache Tomcat.

Education

B.Tech in Electronics & Communication
Reva University, 2019 | 7.2 CGPA

Certifications :
Azure Fundamentals (104)

Personal Details

- **Date of Birth:** 01 Feb 1996
- **Languages:** English, Kannada, Telugu, Hindi
- **Address:** Bangalore, Karnataka
