Summary:

I have over 5.11 years of hands-on experience working with Microsoft Power Platform, specializing in Power Apps (Canvas and Model-Driven), Power Automate, and Dataverse. My expertise includes designing and developing business applications, automating workflows, and integrating with SharePoint, Office 365, and external systems. I have successfully implemented various solutions to streamline business processes, enhance user experience, and improve operational efficiency.

Key areas of expertise:

- **Power Apps Development:** Designing and building Model-Driven and Canvas apps for different business needs.
- **Power Automate:** Automating business processes, approvals, notifications, and data integrations.
- **Data verse & SharePoint Integration:** Managing secure data storage and retrieval.
- **Security & Role-Based Access:** Configuring security roles and permissions in Dataverse and Power Apps.
- **Migration Projects:** Migrating applications and workflows from legacy systems like Nintex to Power Platform.
- **Business Process Automation:** Implementing adaptive cards, approval workflows, and complex process automation.

Education:

- MBA from V Tech School of Business -2015.
- Bachelor of Degree in Eillum University in 2012
- Board of Intermediate from Andhra Pradesh in 2008 .
- Board of Secondary Education in Andhra Pradesh in 2006

Certifications:

- Certified in PL-200: Microsoft Power Platform Functional Consultant
- Certified in PL-100: Microsoft Power Platform App Maker
- Certified in PL-900: Microsoft Power Platform Fundamentals

Technical Skills:

- Power platform: Power Apps, Canvas App, Model driven App, Power Automate (Flows), Power Virtual Agents, Power BI, Logic Apps, SHAREPOINT Server,, Java Script, Json
- Power Platform Tools: MS Teams, SharePoint, Data verse (CDS), Outlook.

Professional Experience:

Organization	Designation	Duration
INSIGHTTEK (Under the payroll company) Techmatrics solutions private limited	Application Developer	Feb -2022 To Nov 2024
CAMSDATA (Under the payroll company) Techmatrics solutions private limited	Technical Consultant	Feb -2019 To Dec 2021

Projects:**Project4:** Freda (Flight Scheduling)**Duration:** Mar 2023 to Till Data**Role:** Application Developer**Client:** Freda**Project Description:**

The Freda Flight Scheduling project leverages Power Apps, Power Automate, and SharePoint to streamline flight scheduling and management. It provides features to efficiently schedule, manage, and monitor flight operations while ensuring data accuracy and accessibility for stakeholders.

Roles & Responsibilities:**1. Requirement Gathering & Analysis**

- Collaborated with stakeholders (flight operations, scheduling teams, and management) to gather requirements.
- Identified pain points in the existing flight scheduling process.
- Designed a streamlined workflow to digitize and automate scheduling tasks.

2. Power Apps Development

- Designed and developed a Canvas App for mobile and tablet users.
- Built role-based user interfaces for pilots, crew, and admins.
- Developed screens for flight management, crew assignment, approvals, and notifications.
- Ensured seamless data integration with SharePoint for storing flight-related data.

3. SharePoint Data Management

- Created and managed SharePoint lists to store flight schedules, crew details, and approvals.
- Configured columns and relationships for efficient data retrieval.
- Optimized queries to improve app performance.

4. Workflow Automation with Power Automate

- Designed and implemented approval workflows for flight scheduling.
- Automated email notifications and alerts for schedule updates.
- Integrated adaptive cards in Microsoft Teams for instant communication.
- Developed Power Automate flows for real-time data updates and reporting.

5. Custom Connectors & API Integration

- Developed custom connectors to fetch real-time flight data from external APIs.
- Integrated Microsoft Outlook for email alerts and notifications.
- Configured Microsoft Teams notifications using Power Automate.

Security & Access Control

- Implemented role-based security using Power Apps permissions.
- Configured SharePoint list-level security to restrict unauthorized access.
- Ensured data integrity and compliance with security best practices.

Testing & Deployment

- Conducted unit testing to validate app functionalities.
- Performed User Acceptance Testing (UAT) with flight operations teams.
- Deployed the application to production and provided ongoing support.

Performance Optimization & Enhancements

- Optimized Power Apps formulas and queries to improve app speed.
- Implemented dashboard analytics for better insights into scheduling efficiency.
- Continuously gathered user feedback for future improvements.

Environment: Power App, Power Automate, Power Automate desktop, SharePoint, Dynamic 365

Project3: Nintex Tool to Power Platform Migration**Duration:** Mar 2022 to June 2023**Role:** Application Developer**Client:** Nintex**Project Description:**

This project involved migrating workflows and applications from the Nintex platform to Microsoft's Power Platform to improve functionality, scalability, and integration. The migration focused on leveraging the capabilities of Power Apps, Power Automate, and SharePoint for enhanced business processes.

Roles & Responsibilities:

- Analyzed existing workflows and applications on the Nintex platform to determine migration requirements.
- Designed and developed Power Apps applications tailored to the client's operational needs.
- Automated workflows using Power Automate to optimize efficiency and reduce manual intervention.
- Integrated SharePoint for secure data storage, retrieval, and process documentation.
- Conducted extensive testing to ensure migrated applications perform seamlessly and met client expectations.
- Collaborate with business analysts to understand the requirements for the migrated processes.
- Design and develop Canvas apps in Power Apps to replace Nintex forms, ensuring a user-friendly and efficient interface.
- Integrate SharePoint forms into Canvas apps, providing seamless data entry and retrieval.
- Create and optimize Power Automate flows to replicate Nintex workflows and automate business processes.
- Conduct thorough testing to identify and resolve any issues or bugs in the Canvas apps and flows.
- Collaborate with SharePoint administrators and Power Automate experts for seamless integration.
- Provide training and documentation to end-users and administrators for the newly developed solutions.
- Collaborate with the project manager to track progress and meet project deadlines.

Environment: Canvas App, Power Automate desktop ,Power Automate, Sharepoint , Dynamic 365, Java Script, JSON

Project2: Camuda Apps**Duration:** May 2019 to Mar 2020**Role:** Technical consultant**Client:** Camuda**Responsibilities:**

- Design and develop Power Apps solutions for data entry, focusing on address, registry, regulatory, ownership, key members, nature of business, and listed information.
- Configure Power Automate (Flows) to automate processes such as sending request mails in case of errors in the application.
- Integrate Power Apps with other data sources as needed for comprehensive entity information.
- Collaborate with stakeholders to understand KYC (Know Your Customer) processes and enhance the end to- end KYC tools within the Power Platform.
- Customize Power Apps user interfaces to ensure a user-friendly experience for KYC makers.
- Implement robust error handling mechanisms within Power Apps to capture and manage errors effectively.
- Implement security measures within Power Platform to ensure data privacy and compliance with regulatory requirements.
- Conduct testing of Power Apps and Power Automate solutions.
- Debug and resolve issues related to Power Platform components.

- Conduct testing of Power Apps and Power Automate solutions.
- Debug and resolve issues related to Power Platform components.
- Suggest and implement improvements to optimize the performance and efficiency of Power Platform solutions.
- Created SharePoint Publishing Sites, Lists and Libraries, Content types.
- Designed Input forms using Power apps.
- Designed Custom Forms using PowerApps.
- Handle the permissions using power apps.

Environment: Dynamic 365, Power Apps, SharePoint Server, Power Automate, Java Script, JSON

Project1: Sensors Test Report Form

Duration: Feb 2019 to Dec 2020

Role: Technical consultant

Client: HSBC

Responsibilities:

- Created SharePoint Publishing Sites, Lists and Libraries.
- Developing Custom lists, Document libraries, setting permissions.
- Involved in developing the applications using PowerApps Power automate.
- Developed application in PowerApps using Flow, Forms and SharePoint online.
- Customizing Lists and Libraries.
- Solutions design analytics in Power Apps Canvas App.

Environment: Power Apps, Power Automate, Dynamic 365, Java Script, JSON
