

RESUME

DEVOPS AWS SRE ENGINEER

DARSHAN SHARMA SATHISH

E-mail: darshan.s1259@gmail.com

Mob: +91 9019116268

Professional Summary

- ❖ Experienced and innovative **Devops, Cloud (AWS) Environment, SRE Engineer, Build and Release** with over **5+ years** expertise in software configuration & release management, building & deploying software, process creation, automation & control & environment management activities for different Application.
- ❖ Source Code Management, Installing Package, **Change Management** and **Software Devops, Builds & Release management**.
- ❖ Create & maintain environment & tools to automate build/release activities.
- ❖ Responsibilities **Implement the Release Engineering** process to support on-going releases and create /maintain release documentation.
- ❖ Well versed in maintaining the code base for each project using SCM tools like **SVN, GIT and GitHub**.
- ❖ Experience with configuration management tools **Ansible and Terraform**
- ❖ Work on servers on the cloud environment **Amazon Web Services (AWS) and Kubernetes**.
- ❖ Work on **EC2, VPC, S3, IAM, Code Commit, Code Deploy & Code Pipeline** Services **AWS**
- ❖ Create and establish the build process using **Apache ANT** to perform builds efficiently and deployment of the application using **Tomcat**.
- ❖ Should be conversant with various build process used for java applications using one or more tools / automation framework like **ANT, Jenkins** etc.,
- ❖ Hands on experience on **Jenkins** for continuous integration and build system.
- ❖ Maintained **Jira** for bug tracking and monitored consistently.
- ❖ Good knowledge of project life cycle (**SDLC**).
- ❖ Work with development teams and testing teams to establish a build schedule, execute the builds and troubleshoot build failures, if any.
- ❖ Coordinate with the development/testing teams to receive the correct versions of re-usable and installing successful builds and making it ready for the Release on time.

- ❖ Manage build source tree including branching and deploy, configure and manage test runtime environments.
- ❖ Good knowledge and hands on experience in Linux and Shell Scripting.
- ❖ Promoting code from one environment to another environment.
- ❖ Experience in Subversion version control and GIT Administration.

Technical Skills

Version Control tools	Git, Github
CICD Tools	Jenkins
Build Tools	Maven
Containerization	Docker, Docker Swarm, Kubernetes, ECS
Artifactory	Nexus
Configuration Management	Ansible
Bug/Defect Tracking Tool	ServiceNow, JIRA
Scripting Language	Shell Script,Groovy, YAML, SQL,Python
Monitoring	Zabbix, Solarwinds, Prometheus, Grafana, Nagios
Cloud Services	AWS
Operating Systems	LINUX and Windows
Messaging Services	AMAZON SNS
Log Management	Elastic Search, Kibana

Academic Details

- ❖ **B.E in ECE at Dr B R Ambedkar Institute of technology, Bengaluru**

Professional Experience

- ❖ Worked as **Devops AWS SRE Engineer** in **Capgemini** from **July 2023 to till date.**
- ❖ Worked as **Devops Engineer** in **IQVIA Bangalore** from **October 2021 to June 2023**
- ❖ Worked as **Software Engineer** in **Programmr Technologies Pvt Ltd Bangalore** from **May 2020 to September 2021.**

PROJECTS

PROJECT: 1

Client: AXA Partner

Role: DevOps AWS SRE Engineer

Environment: AWS, Terraform, Maven, Jenkins, Ansible, Kubernetes, Python, Shell Scripting, JFrog Art factory, Jenkins, Git, Jira, GitHub, Docker & LDAP

Roles & Responsibilities:

- ❖ Worked on GIT to manage source code for applications.
- ❖ Creating New Repository in GIT Hub.
- ❖ Defining, building and automating CI/CD build pipeline using Jenkins.
- ❖ Implemented CI using Jenkins with automated unit tests, static code analysis, Code coverage, code duplication and code standards using SonarQube.
- ❖ Setting up the new build environment for various products in Linux environment implemented the Release practice and responsible for pushing builds into DEV/ QA /Pre-Production environments.
- ❖ Responsible for Continuous Integration and Continuous Delivery process implementation using Jenkins along with Shell scripts to automate routine jobs
- ❖ Implemented AWS solutions using ECS, S3, RDS, EBS, Elastic Load Balancer, and Auto scaling groups, Optimized volumes and EC2instances
- ❖ Wrote Terraform scripts to automate AWS services, which include Web servers, ELB, Cloud Front distribution, Database, EC2, database security groups and S3bucket
- ❖ Implemented CI Pipeline to create and manage AWS AMI's using Hashi corp Packer, terraform and Ansible
- ❖ Worked on Kubernetes to deploy, scale, load balancer, scale, manage Docker Containers with multiple namespace versions on Pod clusters in nodes in QA, Test and Production environments
- ❖ Configured Kubernetes Master and various nodes, configured Consul for service discovery, interacted with API server using command line utility
- ❖ Responsible for the creating and maintaining automated builds for projects written in Java, PHP using Jenkins
- ❖ Written CI/CD pipeline in Groovy scripts to enable end-to-end setup of build & deployment using Jenkins and developed an end-to-end CI/CD Pipelines in Jenkins to retrieve code, perform tests and push build artifacts to Nexus
- ❖ Deployed application build artifacts using Jenkins and shell scripts in multiple integrated environments
- ❖ Troubleshoot build issues in Jenkins, performance and generating metrics on master's performance along with jobs usage and no of builds being run
- ❖ Worked on implementing REST based web services to facilitate communication between client and servers
- ❖ Involved in DevOps migration/automation processes for build and deploy systems
- ❖ Configured Terraform to reliably version and create infrastructure on Aws. Created resources, using Aws Terraform modules, and automated infrastructure management
- ❖ Operated monitoring systems for deployed applications and Infrastructure monitoring with Grafana, New Relic and ELK across different environments
- ❖ Co-work with the globally distributed Development team to fix the Build related issues.

- ❖ Development of shell scripts for automation of existing manual processes.
- ❖ Automated nightly builds for all environments and reporting.
- ❖ Analyzing application logs in order to determine the possible cause of issues and reporting errors directly to the dev team.

PROJECT: 2

Client: Unilever

Role: Build & Release Engineer

Environment: Git, GitHub, ANT, Jenkins, Web logic Server, Shell scripting, Nagios

Roles & Responsibilities:

- ❖ Involved in Planning, Defining and Designing data based on business requirements and provide Documentation
- ❖ Creating branches and tags on Git repository and provided branches access permission to dev team
- ❖ Used Jenkins for Continuous Integration and deployment into Web logic Server
- ❖ Worked on Jenkins tool to configure Nightly Builds to check sanity of our java source code
- ❖ Worked with the release and deployment of large-scale Java/J2EEWebapplications
- ❖ Worked on Release management, Environment Management, Continuous deployments, Continuous integration
- ❖ Used ANT build tool for deploying scripts and deploy processes using Jenkins to move from one environment to other
- ❖ Administration/Maintenance experience of source control management systems, such as Git. Managed project dependencies by creating parent-child relationships between projects
- ❖ Installed and administered repository to deploy the artifacts generated by ANT and to store the dependent jars, which were used during the build
- ❖ Used Nexus repository manager to share the artifacts by configuring the repository manager
- ❖ Worked on continuous integration tool like Jenkins for End-to-End automation for all build and deployments
- ❖ Built and deployed Java/J2EE to Tomcat Application servers in continuous integration process and automated the whole process implementing a CI/CD using Jenkins
- ❖ Installed and configured the packages using YUM and RPM package managers
- ❖ Developed automated processes that run daily to check disk usage and perform cleanup of file systems on Unix/Linux environments using shell scripting
- ❖ Provided support for more than 5 different applications for Configuration Management and build, designed and deployed for production and lower environments
- ❖ Used ANT build tool for deploying scripts and deploy processes using Jenkins to move from one environment to other
- ❖ Administration/Maintenance experience of source control management systems, such as Git. Managed project dependencies by creating parent-child relationships between projects
- ❖ Used Nexus repository manager to share the artifacts by configuring the repository manager
- ❖ Worked on continuous integration tool like Jenkins for End-to-End automation for all build and deployments
- ❖ Installed and configured the packages using YUM and RPM package managers

- ❖ Developed automated processes that run daily to check disk usage and perform cleanup of file systems on Unix/Linux environments using shell scripting
- ❖ Assisted on monitoring servers and responding to event notifications (Service outages, Load Alerts etc.) using Nagios

PROJECT 3:

Client: Ball

Role: Build & Release Engineer

Environment: Git, GitHub, ANT, Jenkins, Web logic Server, Shell scripting, Nagios

Roles & Responsibilities:

- Maintaining the Source Code Management **GitHub/GitLab**.
- Managed Version Control **GIT** and automated current build process with Jenkins with proposed Branching strategies to accommodate code in various testing cycles.
- Created build and deployment jobs in **Jenkins** for various components
- Creating CI/CD pipelines by integrating **GitHub, Maven, Jenkins**.
- Created the Branching Strategy for the parallel development.
- Configured local **Maven** repositories and scheduled projects in **Jenkins** for continuous integration.
- Experience in Ansible, Written Simple **Ansible** YAML scripts to configure the servers.
- Administration/Maintenance experiences of **Continuous Integration** build engine **Jenkins** Deploying, configuring, managing, maintaining, a Master and Slave machines using **Jenkins**
- Administered and Implemented CI tool **Jenkins** for automated builds
- Good Experience in **Docker** like creating **Docker Images, Containers**, and **pushing to Docker hub/Docker remote repositories**.
- Launching **Amazon EC2 Cloud Instances using Amazon Web Services** (Centos/Ubuntu/RHEL) and Configuring launched instances with respect to specific applications.
- Creating/Managing AMI/Snapshots/Volumes, Upgrade/downgrade AWS resources (**CPU, Memory, EBS**)
- Launch/Managing Linux Servers on Amazon cloud (**EC2, EBS, ELB, Security Groups and IAM**) using custom AMI.
- Installed application on **AWS EC2 instances and also configured the storage on S3 buckets**.
- Responsible for **Maintaining of GIT Version control tool**.
- Troubleshoot application issues by log verification.

PROJECT: 4

Project : Rhode Island

Role : Devops AWS Engineer

Tolls : AWS, Git, Maven, Jenkins, Docker, Kubernetes,

Roles and Responsibilities:

- Helped individual teams to set up their repositories in git hub and maintain their code and help them setting up jobs which can make use of CI/CD environment.
- Used Maven as build tool for java based projects.
- Have experience of working with **Docker- docker hub, pulling images from docker hub**, running containers based on an images.
- Managed **Kubernetes charts using Helm**. Created reproducible builds of the Kubernetes applications managed **Kubernetes manifest files** and managed releases of Helm packages.
- Setup full **CI/CD pipelines** so that each commit a developer makes will go through standard process of software lifecycle and gets tested well enough before it can make it to the production.
- Worked on Designing and Deploying **AWS Solutions using EC2, S3, and EBS**, Elastic Load balancer (ELB), auto-scaling groups and OpsWorks.
- Configured & **deployed Java applications on Amazon Web Services (AWS)** for a multitude of applications utilizing the AWS stack, cloud formation.
- Worked with IAM to manage the users and groups using IAM by assigning individual policies and roles.
- Created network architecture on AWS VPC, subnets, Internet Gateway, Route Table and NAT Setup
- Used Hive QL to analyze the partitioned and bucketed data, Executed Hive queries on Parquet tables stored in Hive to perform data analysis to meet the business specification logic.
- Responsible for the Plug-in Management, User Management, Build/Deploy Pipeline Setup and End-End Job Setup of all the projects.
- Maintain track of different releases that are being carried over in different environments.
- Worked on **CI/CD tools Jenkins and GIT** version control system for continuous smooth code release process.
- Developed build & deployment scripts using MAVEN. Automated the process using plugins available **Jenkins and move from one environment** to other throughout the build pipeline.
- Date wise Daily keeping track all the Scripts.
- Integrated **Jenkins with GitHub private repositories, build Automation tools** (Maven and Ant), and Artifact repository for pushing successful build code.

Declaration:

I hereby declare that the above written particulars are true to the best of my knowledge.
