

PRATIK RAJURKAR

Data Engineer

Phone: +91 8275831198

Email: pratikrajurkar3434@gmail.com

Summary

- **3+** years of experience in Data Engineering.
- Leveraged strong skills in developing applications involving **SQL, AWS, S3, EC2, EMR, Athena, Glue, Redshift, PySpark, Python basics, Hadoop, Hive, Apache Airflow, Scala, Data Analysis, Data Warehousing, ETL, Snowflake, Azure Databricks, ADF, Azure Blob Storage Apache Spark, Data Modeling, Relational Databases like MySQL, Oracle, MS-SQL.**
- Extensively worked on major components of Hadoop Ecosystem like HDFS, Hive, Sqoop, and Spark.
- Demonstrated expertise in modern **CI/CD methods.**
- Hands-on experience in optimizing and tuning **Apache Spark** jobs.
- Implemented data orchestration with **Apache Airflow.**
- Developed and managed **End To End ETL Pipeline.**
- Collaborated with diverse technology teams to seamlessly
- Experience in analyzing data using **HiveQL, Athena, Spark programs, Snowflake.**
- Working in **Agile** environment and familiar with Scrum process.
- Experienced with improving **Data analysis** process using transformations and join operations.

Technical Skills

- Primary Skills: **SQL, Apache Spark, PySpark, Python Basics, AWS S3, AWS EC2, AWS EMR, AWS Redshift, AWS Glue, HADOOP, Git, HDFS, Hive, Apache Airflow, Snowflake, Jira, Agile, Azure Blob Storage, Azure Databricks, ADF**
- Languages: **PySpark, Python, SQL, HQL, Scala Basics**
- Databases: **MySQL, Oracle**

Education

- B.E. from B.A.M.U. University

Work Experience

SMG INFOTECH —April 2021 to Present

Project 1: Market Basket Analysis (Jan 2023 to Present)

- **Technologies Used:** PySpark, MySQL, Azure Databricks, Azure Data Factory, Snowflake, Python, Apache Airflow, Gitlab, Jira.
- **Roles and Responsibilities:**
 - Designed and developed ETL pipelines using Spark to move data from various sources into a data warehouse environment of **Snowflake**.
 - Optimized and diagnosed existing ETL pipelines, achieving a **30%** reduction in processing time and overall experience.
 - Collaborated with data analysts and business stakeholders to understand data requirements and translate them into technical specifications.
 - Provide appropriate support to other ETL team members.
 - Creation and support of real-time data pipelines built on Azure technologies including **Azure Data Factory, Azure Blob Storage, Azure HDInsight, Snowflake**.
 - Performed data cleaning operations in Pyspark with the help of APIs.
 - Continual research of the latest big data and visualization technologies to provide new capabilities.
 - Worked with different kinds of data files such as CSV, Parquet, and Databases.
 - Developed **SQL** queries for processing tables.
 - Hands-on Experience in Writing Spark Scripts for Data transformations and aggregations as per the need of the business.

Project 2: Electronic Health Record (April 2021 to December 2022)

- **Technologies Used:** SQL, Hadoop, Apache Spark, Hive, SQOOP, AWS S3, AWS EMR, AWS Athena, AWS Glue.
- **Roles and Responsibilities:**
 - Hands-on experience with Hadoop Ecosystem components like **Hadoop, HDFS, Sqoop, Hive**.
 - Involved in creating Hive tables, data loading, and writing hive queries.
 - Used spark transformations while moving the data to the STAGING layer.
 - Creation and support of real-time data pipelines built on AWS technologies including **AWS S3, AWS EMR, AWS Athena, AWS Glue**.
 - Worked on different file formats like Text file, Json, CSV, Parquet.
 - Hands-on Experience in Writing Spark Scripts for Data transformations.
 - Involved in working on the Data Analysis, Data Quality, and data profiling for handling the business that helped the Business team.
