Project: 3

Organization	NCR
Duration	From 2021 Jan 29 to 2022 Sep 10
Team size	5
Client	HAIER
Role	Customer Engineer

PROJECT DESCRIPTION: SAP (MM)

Basic procurement is a process of acquiring goods or services in the right quantity, at the right price, and at the right time. However it is critical to maintain a right balance between quantity, price, and time. Consider the following example

Organizations try and keep inventory levels at a minimum, due to the prices associated with high levels of inventory; at the same time, it can be detrimental to stop production due to shortage of raw materials.

Getting the minimum price for a product or service is often necessary; however it is equally important to maintain a balance between the product availability, quality, and vendor (seller) relations.

In these we followed 5 steps:

1. **Determination of requirement:** It is the logical subdivision where it is determined what material or services are required, and which supplier can fulfill the requirements.
2. **Creating purchase requisition:** It is the phase in which the purchasing department is informed about the requirement of items or services. A requisition is an internal document.
3. **Creating purchase order:** It is the phase when an order is created from requisition and it is approved and assigned to a supplier.
4. **Goods receipt/ Invoice received:** It is the phase in which the material is received by the company and its condition and quality are being inspected. In this phase, an invoice is received from the vendor (seller).
Invoice verification/Vendor Payment: It is the phase in which the vendor (seller) is paid from the company and reconciliation of the invoice and PO is accomplish

Roles & Responsibilities

- Actively involved in preparing daily status reports to track budget, execution and defect aging and shared with all the stockholders of the project.
- Efficiently & effectively initiated.
- Daily status meeting with team and stock holders to ensure projects times lines are not slipped.
- Daily defect triage to track defects status.
- Extensively worked on manually testing software applications and developed test strategy/plans and test cases.
- Testing software programs to compare to specifications and documentation.
- Reviewed business requirements, test scenario and test scripts design, test reviews, test execution and defect.
- Documenting, tracking, & communicating test plans, test results, analysis, & problems using automation tools.

Project: 4

Organization	Turbinto
