

QA Test Lead Engineer

Praveen
9448608121
Praveennoronha17@gmail.com

Key experties

9 years of experience in Embedded manual and test automation framework design and development, API testing with good and strong domain for, IOT products and cloud solutions, Remote monitoring solution for telecom tower system, DC power plant controller test suite designs, validation of IOT solution for RV's.

Work summary

Currently working as, a Tech lead in Larsen & Toubro Technology Services Limited.
Worked as Senior Test Engineer in Invendis Technology India Private Limited, Bangalore.

Profile Summary

- Mobile application and web application testing manual and automation.
- Robot framework for mobile automation and IOT device automation.
- Mobile application testing for Android and iOS using Python, Selenium, Java, Appium, Android studio, XCode(iOS)
- R&D and Integration test on ZigBee, Bluetooth, Wi-ART and TCP device for Wireless mod-bus communication.
- Good exposure toward test plan, strategies and testing new product.
- Expertise in manual testing and test automation development for Remote monitoring system.
- Expertise in automation of the software products using tools like Test complete and PyCharm.
- Experience in LINUX platform (Ubuntu 16.04.7 LTS).
- Worked on **IOT** domain with cloud API level testing using python and Postman, Mobile app-based testing for IOT domain.
- Expertise and hands on in testing of various industrial products, lighting and building automation, Smart Grid and HVAC automation (Lighting automation products) products for Marine and Recreational vehicles, telecommunication sector, battery management systems and test automation development with respective framework.
- Web application testing with using Python, pytest, for IOT based project.
- Firmware testing and Embedded Testing for tracking towers using different sensors and Wireless modules to monitor the tower remotely using UNIX platfort
- Good exposure on the Web application and web server architecture and mobile application manual testing.
- Experience AWS, Oracle and SQL database.
- Expertise in Agile based STLC with automation framework.
- Worked with Python and PyCharm for application testing
- Experience in telecom domain.
- Expertise in BDD framework with python for embedded product testing.
- Expertise in using Test Complete tool along with Python, Selenium and Jscript.
- Expertise in Lean based STLC with automation framework and manual testing.

Areas of Expertise

Operating Systems	Windows, iOS, Linux
-------------------	---------------------

QA Test Lead Engineer

Praveen
9448608121
Praveennoronha17@gmail.com

Programming Languages	Python, Java
Development Tools	IntelliJ, PyCharm, Eclipse, Test Complete11.
Testing Tools	Wireshark, Putty, CAN analyzer, BabyLIN , Appium, Android studio, XCode, Selenium Test complete,
Test Automation Frameworks	Robot framework, BDD framework, Pytest
Defect tracking tool	Jira, Confluence, Click Up.
Test Management tool	Zephyr
Document Management	MS-Word, excel, PPT
Data Base & Devops	AWS, Oracle, SQL, Docker, containers, Jenkins.
Protocols	CAN, LIN 2.0, Modbus -RS485, RS232, TCP/IP, NMEA2K, Zigbee, NFC, Zigbee, DDMP, RV-C CAN, BLE, Wi-Fi.

Professional Experience

Project 1

Project Name	IOT testing for Rinnai Smart appliances.	Duration	1 years
<i>Tools and Technologies</i>	AWS, Xcode,Docker, Android studio, Robot framework, appium,putty,linux, python.	Team Size	4
Description	Designed and developed automation and manual test cases for complete system which includes Mobile and web application, HMI & cloud, API testing for the IOT flat form.		
Role & Contribution	Worked as tech lead. • Requirements gathering, analysis and preparation of test plan and test Scripts development for hardware, Mobile app and Cloud plat form using robot framework. • Docker implementation for the easy deployment of framework. • Firmware and Hardware testing for the IOT system. • LAN Wi-Fi, BLE communication testing.		

Project 2

Project Name	IOT solution for GCP Admixture with mobile APP.	Duration	1 years
<i>Tools and Technologies</i>	Androide studio, JTAG,	Team Size	3
Description	Designed and developed test cases Mobile application, HMI testing & firmware testing for the IOT flat form.		
Role & Contribution	Worked as senior test automation engineer. • Requirements gathering, analysis and preparation of test plan and test Scripts development. • Automation test framework for Android mobile application using android studio. • Web automation test framework for Python, Java selenium. • Firmware testing. • LAN Wi-Fi, BLE communication testing.		

Project 3

Project Name	IOT solution for RV with interact mobile APP.	Duration	2 years
<i>Tools and Technologies</i>	BabyLIN, Can analyser, Python, Test-NG, Appium, Android studio, XCode, Selenium, PyCharm, IntelliJ, Java, LIN, Wi-Fi, BLE.	Team Size	5
Description	Designed and developed test automation framework for Mobile application, Web application, HMI testing firmware testing for the IOT flat form.		
Role & Contribution	Worked as senior test automation engineer. • Requirements gathering, analysis and preparation of test plan and test Scripts development. • Automation Framework design and Development. • Developing the Test scripts using Python, Java and selenium. • Automation test framework for Android, iOS mobile application testing using Python, Appium, selenium, XCode, android studio. • Web automation test framework for Python, Java selenium. • HMI test automation using python. • Firmware testing. • AWS cloud testing. • CI/CD pipeline • Git integration • CAN, LIN, Wi-Fi, BLE communication testing.		

Project 4

Project Name	Application testing and Indication meter automation.	Duration	6 Months
<i>Tools and Technologies</i>	Python, Robot framework, PyCharm, PyQt.	Team Size	3
Description	Automation of the Application using python and Robot framework and tested the meter in different mode such as user mode and control mode using python.		
Role & Contribution	Worked as Team lead. • Requirements gathering, analysis and preparation of test plan and test Scripts development. • Automation Framework design and Development. • Developing the Test scripts using python and Robot framework. • Automation of serial communication protocol testing. • Automation of function generator and calibrator for electrical testing. • Effectively involved in the incident fix verification. • CI/CD pipeline • Git Integration. • Firmware testing. • Serial, Zigbee, Ethernet communication testing.		

Project 5:

Project Name	Software Automation and HMI testing.	Duration	3 months
<i>Tools and Technologies</i>	Test Complete 11, test universe and ASE2.0	Team Size	3
Description	Automation of the Client software using the Automation tool like test complete in different mode such as file mode and control mode. Integration of the Different Supporting Software to achieve the Complete Client Software and HMI automation.		
Role & Contribution	Worked as Senior test engineer. • Requirements gathering, analysis and preparation of test plan and test Scripts development. • Effectively involved in Automation Framework design and Development. • Effectively involved in developing the Test scripts for GUI and electrical functionality testing for Different products supported by Client Software.		

QA Test Lead Engineer

Praveen
9448608121
Praveennoronha17@gmail.com

- Effectively involved in Automation of DNP-3 protocol testing.
- Effectively involved in Automation of Omicron electrical testing.
- Identifying the incident related to product and reporting to client effectively with help of defect tracking tool [Jira].
- Effectively involved in the incident fix verification.

Project 6:

Project Name	iToc [IOT solution for Telecom Tower]	Duration	6 months
<i>Tools and Technologies</i>	JIRA, Oracle 10G, Python, Pytest.	Team Size	2
Description	iToc offers M2M solutions for distributed infrastructure and mobile work force. Invendis combines its products, frameworks and services to offer end to end solutions. We design remote monitoring systems & services to global infrastructure companies to enable them to monitor, control, maintain and manage their distributed infrastructure assets efficiently.		
Role & Contribution	Worked as senior engineer • Involved in requirement analysis and sorting the requirement depending on the functionality of the protection scheme. • Involved in electrical testing different protection scheme like Generator, Bus, Transformer, Line and utility protection relay controls. • Writing the test Procedure for the DG, Rectifier and Relay controller. • Maintenance of records and documents (test specifications, test cases document, defect report and test summary report). • Git Integration • Devops pipeline.		

Project 7:

Project Name	DC Power System and Controller Integration	Duration	14 months
<i>Tools and Technologies</i>	SNMP Utility, Power SNMP Manager, MIB Browser, SNMP protocol, Flex API, MIB browser, MYSQL 5.7.	Team Size	3
Description	Description: Controller integration 1) Delta controller. 2) Flex controller. 3) Huawei controller. 4) Lineage Controller. Automation of site power management system using IOT device. Using SNMP protocol integrating the controller with remote monitoring system to maintain monitor the telecom tower and providing the safety.		
Role & Contribution	Worked as Senior Test Engineer. • Requirements gathering, analysis and preparation of test plan and test cases development. • Effectively involved in the GUI and HMI functionality testing of implemented schemes.		

QA Test Lead Engineer

Praveen
9448608121
Praveennoronha17@gmail.com

	• Test procedure development for communication module. • Involved in IEC101, IEC104, TCP/IP communication testing and HMI testing. • Follow up with the Developers. • Identifying the incident related to product and reporting to client with help of defect tracking tool [Jira]. • Designing of automated test scripts for electrical testing.
--	---

Project 8:

Project Name	Emerson Controller integration with iSense [IOT device].	Duration	9 months
Tools and Technologies	Putty, WINSCP, MIB Browser, SNMP, UNIX, Oracle 10G, Jira.	Team Size	2
Role & Contribution	Worked as Team lead for IOT and DC system solution. Responsibilities: • Analyzing the customer requirements and specifications. • Preparing Data sheets and Reports. • Involved in the Protocol testing for SNMP. • Involved in data base testing (Oracle 10G). • Involved in automation script generation system level testing with python as scripting language. • Logging the defects and verifying the bugs using JIRA. • Resolving technical queries among team members and Mentoring		

Education

	Bachelors	Diploma
Branch	Bachelor of Computer Applications.	Electronics and communication engineering.
University	CV Raman university	Bangalore University

Areas of Strength:

Accountability skills	innovative
Quick Learner	Team player skills
