Bauer services

Web Application Developer

Sep 2023–Jun 2024

Project: Ecosystem: As part of the Web application, there is a module called product module, in this module I worked on a product listing page and product detailing page. Basically, I have to display the product according to the requirement, and once you clicked on that product then it redirects to the product details page.

Roles and Responsibilities:

- Single Contributor for the module.
- Development of highly performing and highly scalable modules.
- Frontend architecture using Redux, Thunk and React in the node powered workflow.
- Unit testing using React Testing Library.

Project: Zee news : As part of the Business Website, there is a module called VTO (Virtual Try On), which is a product of ACC, in this module you will get product recommendations according to Your Skin tone based on Customer Management Services (CMS). Project started from scratch with the latest technologies for UI like React, Redux Thunk, SCSS, HTML5, JavaScript ES6. This platform was being created for all the engineers working for our client, there were 35 modules out of which I worked on 2 of the modules.

Roles and Responsibilities:

- Work closely with architect to understand the business requirements
- Identified web-based user interactions and developed highly-responsive user interface components via React concepts
- Development of highly performing and highly scalable library.
- Development of UI frameworks for web application and support.
- Frontend architecture using Redux, React in the node powered workflow.
- Identified web-based user interactions and developed highly-responsive user interface components via React concepts.
- Translated designs & wireframes into high-quality code and wrote application interface code via JavaScript following React.js workflows.
- Troubleshoot interface software and debugged application codes to improve functionality and performance by 50%.
- Developed and implemented front-end architecture to support user interface concepts with 100% accuracy.
- Developed the latest user-facing features using React.js and built reusable components & front-end libraries for future use.

Amayax Infotech

FRONTEND DEVELOPER

April 2019–Jan 2022

Project: Nutrition: An online e-commerce platform that allows users to browse products, search, filter, view details, add items to the cart, and place orders. The frontend is designed to be user-friendly, responsive, and efficient across devices

Roles and Responsibilities:

- Designed CSS templates for use in all pages on the website working with CSS Background, positioning, text, border, margin, padding, and table.
- Applied optimization techniques to reduce page size and load times to enhance user experience using sprites.
- Troubleshoot interface software and debugged application codes to improve functionality and performance by 50%.
- Developed and implemented front-end architecture to support user interface concepts with 100% accuracy.
- Developed the latest user-facing features using React.js and built reusable components & front-end libraries for future use.
- Optimized components for maximum performance across a vast array of web-capable devices and browsers.
