

ABHISHEK PATRA

Key Skills	Comments
Automation Test	5 Years of experience
Python & Robot Framework	2 Years of experience

Senior Software Engineer-

Objective:

Experienced telecom professional with a strong background in **Manual** and **Python automation testing**. Seeking a challenging role in the telecom industry where I can utilize my skills to ensure network reliability and efficiency. Committed to leveraging my in-depth understanding of telecom systems and **Python automation** to deliver high-quality results, optimize processes, and contribute to the advancement of **telecommunications technology**.

Experiences

Strong work experience area –

Python | Pytest | Robot | Selenium | Database testing | Robot | SQL | Unix | API Testing | Rest API Testing | Dataset Automation using Python Script | AWS –Cloud | UI Testing | Rest API Testing

Domain/System/ module Worked/Working with:

Siebel CRM *Telecom BSS/OSS * Global Payment Gateway * Telecom OSS –Inventory Management (Provisioning & Activation) * Rating Charging * Mediation *

Core Area Involvement:

- Agile | Database Testing | File Processing | API Testing | web service testing | Role based access security system | / Dataset Automisation using Python Script | System Integration – Functional |
- Process worked With : **Agile | V model | Waterfall**
- Automation Tool used : Selenium | Pycharm | Defect Management tool : HPALM , MTM | Process : Agile + Waterfall Model + Devops , Configuration Tool : GIT**

Education

- BPUT
- B.Tech:- 2017

Technical Qualification Headlines:

Automation Testing * Python Basic and Core *API Testing *Database Testing * Web service Testing * Unix * SQL * Soap UI * HPALM * MTM * Waterfall model * Agile * JIRA * Restful Web service * JSON *Data Volume Performance test * Security Test *

EXPERIENCE SUMMARY:

- ❖ Over 5+ years of work experience in IT industry with specialization in Software Quality Assurance and Testing Extensive working experience on all phases of Software Development Life Cycle (SDLC), methodologies and process. O key expertise includes testing & debugging GUI & Multi-Applications environment & automated testing using Selenium WebDriver. Experience in **designing test suites** and **test cases** using Unit test and **pytest** frameworks.
- ❖ Hands-on experience in automating web applications using python **Selenium web driver**.
- ❖ Experienced in using **Jenkins as a Continuous integration** server to configure with **Git/Github repository**.
- ❖ Experienced in writing **Test Plans, defining Test Scenarios and Test Cases**, developing and maintaining test scripts, analyzing.
- ❖ Technically resourceful in different types of testing such as **Functional, Positive, Negative Regression, Integration, Black box White Box, Smoke, Volume, Load, Performance. System testing User Acceptance**. End-to-End and Business Process
- ❖ Experienced in providing the efficient locators strategy like **XPath and CSS** to run WebDriver script in stable condition.
- ❖ Knowledge of Developing **REST APIs using Python**, and basic **Flask framework**.
- ❖ Good at **Object-oriented Programming** and **File processing, Exceptions, and Regular expressions**.
- ❖ Exposure to **Pandas, NumPy, and Json libraries**.
- ❖ Proficient in using **basic SQL queries to perform back end testing for data integrity**
- ❖ Experienced with **Github remote/local repository, commit, cloning push and pulling operations**.
- ❖ Basic knowledge about Amazon Web service (AWS)Worked in **Agile Methodologies**.
- ❖ Ability to adopt to new methodologies, tools and technologies and domains depending on the job responsibilities.

TECHNICAL SKILLS:

Testing Tools:

Selenium IDE/WebDriver/GRID, HP Unified Functional Testing (UFT)/QTP, Test Link, Test Mana SOAP UI, RESTful API, Jenkins, Github, PostMan, Advanced Rest Client, REST Easy.

- Languages: Python SQL, Mongoddb , Java (basic), HTML, CSS, XML.
- Test Framework :- Unittest, Pytest, , Robot.Data Driven Framework, BDD (Cucumber Framework)
- Testing Tools :- REST, PuTTY
- Agile: Scrum, Waterfall.

- Bug Tracking Tools: JIRA, HP ALM
- Databases: SQL Server, DB2, Oracle, MySQL
- Operating Systems: Windows (XP, 7, 8 and 10), Linux, Mac OS.
- BI Tool: Tableau.

Working Zone – Organization:

Was working as **Senior Software Test Engineer** with Girmiti software, Bangalore **since July 2022 to July 2023**

Role and Responsibilities:

- Analyzing requirements and preparing Test cases based on the Functional document.
- Smoke testing on the critical or basic features of an application, Functional testing on each and every component of a module.
- Detecting bugs & classifying them based on severity, priority, and logging in Jira and Confluence.
- Interacting with the developers to ensure they understood the issues and were proactively involved in the Defect review meetings.
- Testing telecom software **TelecomOpsAutoPro** for Sanity transactions.

Lepide software (July 2021 to July 2022)

Project: Lepide Data Security Platform Worked On Threat Detection Model of O365 Components

Role and Responsibilities:

- Analyzing requirements and preparing Test cases based on the Functional document.
- Smoke testing on the critical or basic features of an application, Functional testing on each and every component of a module.
- Detecting bugs & classifying them based on severity, priority, and logging in Jira and Confluence.

Interacting with the developers to ensure they understood the issues and were proactively involved in the Defect review meetings.

Pixelkare Solutions Pvt Ltd (Oct 2018 to Dec 2020)

Project : CMA SA (E-Learning)

Description: CMA SA is an (E-Learning Software). It is an eLearning Website – a kind of distance learning with the help to learn all subjects of 11th and 12th Arts, Science, And Commerce students: educational Videos, online platforms, programs, Notes, blogs, online tests, etc. Students can facilitate learning, control learning, provide access to resources, and offer support in an easy and engaging way.

Role and Responsibilities:

- Analyzing requirements and preparing Test cases based on the Functional Testing document.
- Smoke testing on an application's critical or basic feature, Functional testing on each and every component of a module With different Network conditions, With different hardware configuration and with different Screen ratios.
- Testing Mobile app

- Testing APIs using Postman.
- Detecting bugs & classifying them based on severity, priority, and logging in to Zoho Sprint
- Interacting with the developers to ensure they understood the issues and are proactively involved in a Defect review meeting.

Maastrix Solutions Pvt Ltd (Jan 2018 to Sep 2018)

Project 1: JBH Medical (Web Based Application)

Position: QA engineer

Team Size: 2

Platform: Windows

Description: It is a native Web app where we will get all products related to differently-abled persons (disabled), within one touch a person can get all products from one website.

Role and Responsibilities:

- Analyzing requirements, Preparing Test cases based on the Functional document.
- Smoke testing on the critical or basic features of an application, Functional testing on each and every component of a module.
- Detecting bugs & classifying them based on severity, priority, and logging in Microsoft Excel
- Interacting with the developers to ensure they understood the issues and are proactively involved in Defect review meetings.

PROJECTS UNDERTAKEN:

Project Sequence 1:

Project Name : TelecomOpsAutoPro

Client : US Cellular, USA

Vertical : Telecom OSS

Technology & Tool: Selenium IDE/RC/WebDriver/GRID, HP Unified Functional Testing (UFT)/QTP, Test Link, Test Mana SOAP UI, RESTful API, Jenkins, Github, PostMan, Advanced Rest Client, REST Easy.

Project Overview

IPTA is a payment gateway authorizes electronic credit card and Automated Clearing House (ACH) payments to provide seamless payment processing for businesses. It is similar to a POS terminal found in many retail establishments. EIPS Payment gateways encrypt and store sensitive data, including credit card numbers, ACH account numbers, AVV and CVV2 information, ensuring that confidential information is safe while processing payments. These gateways are also responsible for transferring payment information to the customer's acquiring bank. Payment gateways reduce a business' liability and ensure that payments are processed securely. Customers will be prompted with a secure payment page during checkout. Several steps take place during the transaction process, which takes only a couple seconds. It all starts when a user submits a payment from a business' website, ERP or third party application

Various Module: Conversion Reporting Locator Report, Payment Report Analytics, Payout Summary Statement Report, Payout Detail Report, Transaction summary Report, Transaction detail Report, Summary of processing

statement report, Vendor status Report

Task Handled:

- Properly analyze Business logic and SRS
- Created and executed test cases to ensure Functionality meet Business logic
- Analyzed logs generated reports and identified failures.
- Identified bug trends and participated in general QA initiatives, Maintain a consistent look and feel throughout all modules
- Prepare Traceability matrix to match use case and test case ,Involve in review of test case and share review comments
- Involve in file processing and implementation of stub during system Integration
- Log the defect using defect management tool such as HPALM.
- Run the jobs using Unix commands
- Generate various types Reports and share with top management

Project Sequence 2:

Project Name: OSSOptiSync

Vertical: Telecom OSS

Client : US Cellular, USA

Technology & Tool : Data warehousing /Etl , SAS Data Management, Big Data Analytics

Detail Project Overview and Workflow:

5G is the next generation mobile technology It will enable a host of rich multimedia services such as video calling, video on demand, and provide a richer experience for existing services such as mobile internet, mobile TV and MMS.5G networks operate on technology called High Speed Downlink Packet Access (HSPA). Data is transmitted many times faster than earlier 2G/3G networks. This basically means that in addition to the earlier audio, graphics, and text, you can now send and receive video content too. Monitoring and measuring critical VoIP call quality components is relatively easy if you have the right CDR analysis using DWH. Mediation is the process of collecting and processing usage data from networked devices, usually for billing purposes. Quality VoIP calls require an IP network that can deliver voice packets within the minimum requirements around jitter, packet loss, and latency. This solution allows user to report on CDRs to identify low performance VoIP metrics, find other calls affected, and identify potential patterns on Cisco VoIP networks. In-depth VoIP call metrics in this solution allows user to view call path details, call signaling, and find the root cause of the issue.

At Mediation there are following tasks performed.

Collecting and validating CDR from network elements (Switches / MSC's), Filtration (non billing CDR'S)

Correlation of different input sources CDR's, Aggregation of partial CDRs related to the same call,

CDR normalization, Transformation of data as per business logic, Downstream Format mapping, header and trailer generation, Downstream Distribution.

Whenever a Subscriber / Customer uses communication services (Voice, Call, MS, Data transfer etc.) from a Service Provider, Usage Data are generated at the network element. The usage data is called as Call Detail Record (CDR) in the traditional voice network environment or Internet Protocol Detail Record (IPDR) in the data network environment. Some of the Service Usage Data sources in the network are:

GSM telephony Network Elements

GSM telephony, Voice calls – MSC, SMS traffic – SMSC, Data traffic – GGSN, MMS traffic – MMSC

Roaming CDRs from business partners, Interconnect CDRs from partners

The CDRs are normally pushed to or pulled from the switches. The switch generates a CDR file. These file contains header or trailer records containing the number of CDRs in a particular file. The files are generated as they reach a specified count or at regular time intervals.

Roles and Responsibilities

- Reviewed Business Requirements, Functional Specifications, and Detailed Design documents (including UML).
- Updated test plans, created test cases and test scenarios for assigned functional areas (including Transact SQL queries for data validation).
- Analyse mapping sheet and verify source and target system
- Use complex queries to check output to ensure it meets the business logic
- Executed test cases to ensure functionality meets the customer requirement
- Logged and regressed bugs using HPALM
- Maintained 12 servers used by the test team (including setup, configuration and change management).
- Performed setup and BVT testing with each build

Declaration:-

I hereby declare that the above-mentioned information is correct to the best of my knowledge
