Career Objective

Seeking a challenging career opportunity in assignments which would help me to utilize my academic background that assists me to gain experience, employ my excellent interpersonal skills, and enable me to make a positive contribution in your organization.

Professional Summary :

Versatile DevOps Engineer with 4+ years of experience in developing robust automation solutions and implementing DevOps best practices. Expertise in creating Python applications for infrastructure management, CI/CD automation, and operational tooling. Skilled in leveraging modern DevOps technologies including containerization, orchestration, and infrastructure as code. Proven track record of improving development workflows and operational efficiency through innovative automation and tooling.

Strength :

Quick Learner, communication skill ,Adaptable
Work well under stress Leadership quality

Good at handling challenges

Work Experience :

Unosis IT Solutions

12th March 2021 -30th April 2025

Relevant Experience : 4 years one month

Projects:

Development, Maintance & Design in azure using Terraform :

Designed and implemented custom Terraform modules for Azure infrastructure, reducing deployment time by 70% while ensuring consistent security controls and compliance

Developed sophisticated Python automation scripts that streamlined resource provisioning and configuration management across 200+ Azure resources

Created and maintained Azure DevOps pipelines for CI/CD, implementing infrastructure testing and security scanning that reduced release cycles from weeks to days

Architected cloud-native solutions using Azure Functions and Container Apps with seamless integration into existing ecosystems

Built comprehensive monitoring solutions using Azure Monitor and Application Insights, decreasing incident response time by 65%

Implemented infrastructure testing frameworks using Python, ensuring 99.9% reliability for production deployments

- Maintained and enhanced Azure infrastructure using Terraform modules and Azure DevOps for version control
- Developed Python automation scripts that reduced manual operational tasks by 25+ hours weekly
- Configured and managed CI/CD pipelines in Azure DevOps with integrated testing and deployment gates
- Implemented infrastructure monitoring and alerting using Azure Monitor, with custom dashboards for different stakeholders
- Created custom Python tools for cost optimization and governance across Azure subscriptions
- Integrated security tools with Azure platform to enhance security posture and ensure compliance with industry standards
- Collaborated with development teams to implement Infrastructure as Code best practices
- Assisted in migration of on-premise applications to Azure PaaS services, reducing operational costs by 50%
- Implemented Python scripts for automating routine maintenance tasks and infrastructure health checks
- Developed Terraform templates for standardized environment provisioning
- Configured Azure Monitor workspaces for centralized logging and monitoring
- Supported security compliance initiatives for financial regulations using Azure Policy and Blueprints

Development and Automation in Python

- Engineered Python applications for cloud resource management and deployment automation, saving 30+ engineering hours weekly.
- Developed and maintained CI/CD pipelines in Jenkins, implementing automated testing and quality gates that increased deployment success rate by 90%.
- Built custom Python CLI tools for developers to simplify common workflows and standardize development practices.
- Created Docker container orchestration system with Python management scripts for local development and production environments.
- Implemented infrastructure monitoring solutions using Python, Prometheus, and Grafana with custom alerting integrations.
- Developed Python-based data processing pipeline for log analytics that identified performance bottlenecks and security issues.
- Developed Python scripts that automated routine server maintenance, database backups, and system health checks
- Created deployment automation tools using Python and Bash, reducing deployment time from hours to minutes
- Implemented infrastructure as code solutions using Terraform and Python to provision consistent environments
- Built custom monitoring dashboards and alerting systems using Python integration scripts
- Developed automated testing frameworks for infrastructure validation and compliance checking

Roles and Responsibilities

As a Fresher I was introduced to the Cloud like amazon web services and SDLC Process.

Gained a good understanding of Banking and Financial domain.

Implemented and managed secure VPN connections and firewalls, strengthening network security.

Utilized Ansible for automation of network provisioning tasks, reducing manual errors and improving efficiency. Got Promoted and got an opportunity to work on AWS Platform & with Devops tools.

Design, develop and maintain CICD pipelines to automate software builds, tests and deployments.

Automate infrastructure deployment using infrastructure as a code tool such as terraform.

Managed web application deployment and virtual hosting environments for multiple client websites

Configured and maintained MySQL database installations for production applications

Implemented DNS and DHCP services for internal network infrastructure

Optimized web server configurations to handle peak traffic loads

Automated system backups and disaster recovery procedures

Participated in on-call rotation to provide 24/7 system support

Redesigned and optimized the **AAP server infrastructure**, improving execution speed by 40% and reducing resource utilization by 25%.

Managed network infrastructure for 30+ GCP projects including VPC design, subnetting, and IP allocation

Implemented and maintained VPN tunnels between GCP and on-premise data centers with 99.99% uptime.

Configured and optimized Google Cloud CDN, reducing content delivery latency by 40%

Designed custom firewall rules and security policies compliant with industry standards

Deployed and administered GKE clusters with advanced networking requirements

Automated network configuration tasks using Terraform and custom scripts.

Implement infrastructure automation using tools like Terraform for scalable and reliable Health systems. Utilize AWS cloud services to deploy and manage secure and compliant healthcare infrastructure.

Establish and enhance CI/CD pipelines with Jenkins for automated testing and deployment of health applications.

Containerization and Orchestration: Implement Docker and Kubernetes for efficient application packaging, resource utilization, and scalability in the health domain.

Architected and implemented shared VPC networks across 20+ projects, improving resource utilization by 35%.

Led migration to GKE Gateway Controller from legacy ingress, reducing configuration overhead by 40%.

Designed and deployed Anthos Service Mesh across multiple environments, enabling advanced traffic management and observability.

Implemented comprehensive network monitoring using Cloud Monitoring, reducing MTTR by 60%.

Optimized global load balancing configuration, decreasing latency by 25% for international users

Troubleshoot complex network issues using packet capture analysis and Cloud Logging.

Workflow Automation Project with Nextflow

- Engineered and implemented a scalable data processing pipeline using Nextflow, a cutting-edge workflow management system, improving processing efficiency and reducing runtime from [previous time] to [new time]
- Designed containerized workflow components with Docker, ensuring complete reproducibility and portability across development, testing, and production environments
- Integrated workflow with cloud infrastructure (AWS/GCP/Azure), implementing auto-scaling capabilities to handle variable workloads efficiently
- Developed modular workflow components that could be reused across multiple projects, reducing development time for new pipelines .
- Implemented comprehensive CI/CD pipeline using GitHub Actions to automatically test, validate, and deploy workflow changes .
- Configured workflow to handle parallelization of resource-intensive tasks, optimizing computational resource utilization .
- Created detailed documentation and knowledge transfer materials, enabling team members to easily understand and contribute to the workflow
- Utilized infrastructure-as-code practices to manage compute resources, ensuring consistent environment configurations .
- Orchestrated deployment of **WatchGuard's** cloud-based security services using infrastructure-as-code practices
- Managed hybrid cloud infrastructure supporting both on-premises appliances and cloud security offerings .
 - **Firewall Infrastructure:** Cloud-managed firewalls deployment and configuration automation .
 - **Multi-site Management:** Automated deployment pipelines for distributed firewall appliances across multiple locations
 - **Security Policy Automation:** CI/CD for consistent security rule deployment across enterprise networks

Wireless Network Infrastructure

- **Access Point Management:** Automated deployment of Wi-Fi Cloud-managed Access Points (AP120, AP125, AP225W, AP320, AP322, AP325, AP327X, AP420).

- **Site Survey Automation:** Scripted deployment based on predictive site surveys and floor plan configurations.
- **Capacity Planning:** Automated scaling of wireless infrastructure based on device density requirements.

Endpoint Security Management

- **Remote Workforce Security:** Endpoint Security deployment through WatchGuard Cloud for remote workforce management .
- **Automated Endpoint Provisioning:** Docker-based deployment containers for endpoint security agent distribution
- **Centralized Monitoring:** DevOps automation for endpoint health monitoring and compliance reporting .

Infrastructure Automation Initiative

- Led project to automate infrastructure provisioning using Terraform and Ansible
- Implemented infrastructure-as-code practices, improving configuration consistency by 100%

SKILLS

Expert in: Python, Bash, Linux Administration (3 years), Next flow

Proficient in: Elasticsearch, Redis, Nginx, Kibana, Jaeger/OpenTelemetry, S3, Helm Charts, GitLab CI/CD

Cloud Platforms: Amazon Web Services (AWS) (4 years) , Azure and GCP (4 years

Automation Platforms: Red Hat Ansible Automation Platform, Ansible Tower, AWX

Scripting/Programming: Python, Bash, YAML, Jinja2, JSON

Security: Role-based access control (RBAC), Vault.

DevOps Tools: Terraform, Jenkins, Docker, Ansible automation, K8s (Flux , Agro CD, kubecost , cluster API , Minikube) (3 years and 9 months)

Version Control: Git

Operating Systems: Linux (Red Hat, CentOS, Ubuntu) , Red hat ansible automation(4 years)

Networking: Layer 2 (L2) Networking: VLANs, STP, EtherChannel, MAC Address Tables (3 years and 10 months)

TCP/IP, VPN, Firewalls, Load Balancer ,ssh,nginx ,DNS, DHCP, SSL/TLS configuration

Scripting: Bash, Python

C-language : 3.5 years of experience

Monitoring and Logging: CloudWatch, Cloud trail , Grafana

Network Security: Firewalls, VPNs, NAT, IDS/IPS

Collaboration / ITSM Tools: ServiceNow, Jira Service Management

Educational Qualifications

Class/ Semester	School/ College	Board/ University	Year of Passing	Percentage /CGPA
B.Tech (Mechanical)	Silicon Ins/tute of Technology, Sambalpur	BPUT,Odisha	2015	6.75
12 th	S.C.S. Jr College,Puri	CHSE, Odisha	2011	51.5%
10 th	Mahanta Gadadhar High School,chandanpur,Puri	BSE, Odisha	2009	78.16%

Personal Details

Father's Name: Sailendra Narayan Pradhan

Mother's Name: Purnima Pradhan

Indian

English, Hindi, Odia
