

**ADITYA J**

**E-mail:** [adityavjambagi@gmail.com](mailto:adityavjambagi@gmail.com)

**Contact No:** +91 7259310327

### Professional summary:

- ❖ Over 6 **years** of IT experience in which 5.1 years as a **DevOps/build and release engineer**. Hosting based 24X7 support environment. Seeking a Technical position fully utilizing a strong customer service attitude, exceptional organizational ability, and technical skills
- ❖ Experience working in **Agile software Development environment**.
- ❖ **Experienced with managing the code using the Version control systems like Git and GITHUB.**
- ❖ Experience in branching strategies, tagging and maintaining the version across the environments.
- ❖ Experienced with build tools like **Maven** for java applications.
- ❖ **Experienced with Nexus integration for alert policies from different services to slack, e-mail, and PagerDuty [based on severity].**
- ❖ **Experience in writing python scripts for automating and managing the infrastructure.**
- ❖ Experienced with groovy scripting in **Jenkins** as CI/CD tool for pipelines of application and infrastructure.
- ❖ Hands on experience in containerization using **Docker** for microservices.
- ❖ Worked with monitoring tools like **Prometheus, Grafana, New Relic** for application and infrastructure level.
- ❖ Worked on **Terraform** for provisioning and managing the infrastructure in Amazon Cloud.
- ❖ **Experience in Automating Configuration management using Ansible, created multiple playbooks for real-world needs of the project and worked with roles using Ansible galaxy.**
- ❖ Worked on creating **Kubernetes** clusters and manifest files for applications and addons.
- ❖ Collaborated with cross functional teams to address project requirements. Able to effectively manage time and prioritize multiple projects.
- ❖ Excellent communication, team membership and relationship management skills.
- ❖ Strong perseverance and diligence towards attaining challenging goals and possess good communication skills and quick learning ability.

### Professional Experiences:

- ❖ Working as a **DevOps Engineer** in **Aveit Solution Private Limited** from Jan 2019 to till Date.

### Academic Details:

- ❖ **B E from Gogte institution of technology Belagavi, Karnataka 2014-2018.**

## Technical Skills:

|                     |                                                 |
|---------------------|-------------------------------------------------|
| SCM Tools           | : GIT, GITHUB                                   |
| Operating Systems   | : Linux, Ubuntu, and Windows.                   |
| Build Tool          | : Maven                                         |
| CI/CD               | : Jenkins, GitHub-Actions.                      |
| Configuration Tools | : Ansible, Terraform                            |
| Cloud services      | : AWS                                           |
| Operating Systems   | : Linux                                         |
| Scripting Languages | : Shell Script, Python, Groovy and Yaml         |
| Virtualization      | : Docker                                        |
| Orchestration       | : Kubernetes                                    |
| Repository          | : Nexus, JFrog                                  |
| Code Analysis       | : SonarQube, Checkmarx                          |
| Monitoring Tool     | : New relic, Grafana, Prometheus and CloudWatch |

## Projects:

### Project #1:

**Client – Premiere Global Service, Atlanta, GA**

**Project – Athena Healthcare**

**Role: DevOps and SRE**

**Duration :3 years**

### Roles & Responsibilities:

- Involve in the several of deployments in different steps like stage deployment and prod deployment to bring the client requirements, propose solutions and ensure delivery.
- Handle a primary ON-CALL & involve in several CSO situation which are raises in off time and also in working hours.
- Involve in the security patches like replacing an IAM user with an expired user and giving the access and removing an access to the sum of users in Jenkins etc.

- Initiated the Jenkins continuous integration server installation and configuration for all SVN Repositories.
- Systematized problem-solving version control system and integration with ANT build issues by communicating with relevant teams.
- Piloted identification process, trouble shooting, and resolving problems arising in the build process using Jenkins.
- Discharged uploading of images to cloud using file manager and bulk data to and from cloud.
- Succeeded in initiating and fulfilling the installation and configuration of RedHat, Centos, Ubuntu
- Administrations of Users and Groups.
- Monitoring Linux servers such as Disk space utilization, CPU utilization, Memory utilization.
- Linux Package management tools (rpm, yum etc.)
- Alerting & Monitoring of a whole infrastructure has been done using several of Monitoring tools like
- New-relic, Grafana, Splunk and CloudWatch.
- Having an idea of promotion of a one type job form one environment to another environment using
- Jenkins.
- Using Terraform modules, created a several type of AWS services like Redis cluster, SNS Topic etc.
- Involved in the rightsizing of an EC2 instances and EMR clusters for cost optimization.
- Implementing AWS Infrastructure services (IAAS) like EC2, VPC, ELB, EBS, S3, RDS.
- Setting up new server (EC2) instances/services in AWS, configuring security groups, and setting up Elastic IPs.
- Troubleshooting and Configuration of SSH, FTP, NFS and APACHE Server. Taking back upon Linux server using Shell Script.
- Monitoring health of Amazon EC2 instances and other AWS services.
- Managed hosted zone and domain naming service using Route53.
- Worked in close collaboration with the Development Teams, Product Management, Enterprise Architects, Operations, Executives and Finance teams to achieve the optimum performance low-cost solution.

## **Project #2:**

**Client – GE Healthcare**

**Project – Jackson National Life Insurance**

**DevOps and Cloud Engineer/SRE**

**Duration: 2 years**

## **Roles & Responsibilities:**

- Worked on multiple projects related to AWS cloud infrastructure, including AWS cost optimization.
- Implemented various cost optimization initiatives that resulted in a 30% reduction in monthly AWS spending.
- Analyzed AWS billing reports and used AWS Cost Explorer to identify areas where cost savings could be achieved.
- Utilized AWS auto-scaling to optimize EC2 instances based on workload demand, resulting in significant cost savings.
- Developed scripts and tools to automate the identification and tagging of unused resources for removal, resulting in further cost savings.
- Worked with project managers and stakeholders to establish budget alerts and ensure that AWS costs remained within budget.
- Setup/Managing Linux Servers on Amazon (EC2, EBS, ELB, SSL, Security Groups, RDS, and IAM).
- Setup/Managing VPC, Subnets; make the connection between different zones; Block suspicious IP/subnet via NACL.
- Setup/Managing CDN on Amazon CloudFront (Origin Path: Server / S3) to improve site performance.
- Create/Manage buckets on S3 (CLI) and store DB. and logs backup, upload images for CDN serve.
- Setup/Managing Databases on Amazon RDS. Monitoring servers through Amazon CloudWatch, SNS, and new relic.
- Creating/Managing DNS records on Amazon Route 53 and the go-daddy panel.
- Creating/Managing AMI/Snapshots/Volumes, Upgrade/downgrade AWS resources (CPU, Memory, EBS).
- Creating AWS Instances and Resources Bills.
- Utilized Python for scripting and automation of AWS resources provisioning and management.
- Monitoring Internal Servers using a new relic, Zabbix for Network monitoring.
- Implemented the Magento multi versions as a single Docker image and pushed to Docker Hub using the GitHub-Actions pipeline.
- Created self-hosted runners for GitHub-Actions and configured with the required dependencies to execute pipelines smoothly.
- Designing, deploying, and managing Kubernetes clusters in production and non-production environments.
- Creating and managing container images using Docker and other containerization tools.
- Configuring and managing Kubernetes resources, such as pods, services, volumes, and deployments.
- Implementing and managing Kubernetes networking, including ingress, load balancing, and network policies.

- Automating deployments, scaling, and monitoring of Kubernetes applications using GHA CI/CD pipelines and monitoring tools.
- I have created Grafana Dashboards and alerts for Kubernetes clusters monitoring the pods and nodes resources usage.
- Troubleshooting and resolving issues related to Kubernetes and containerization in production environments.
- Collaborating with cross-functional teams to gather requirements, develop technical solutions, and provide guidance on best practices.
- Documenting architecture, designs, and operational procedures related to Kubernetes and containerization.

**Declaration:**

I do hereby declare that all the above-mentioned particulars are best of my knowledge and Belief.
