EXPERIENCE

Allianz Technologies, Trivandrum — Software Engineer

Oct 2021 - Present

Working in the maintenance of Backend Server for web application of Allianz.

Palnar , Trivandrum — Software Engineer

Feb 2019 - Oct 2021

Worked in the development of Backend Server for mobile applications.

EDUCATION

Vishweshwaraya Technological University, Belgaum, Karnataka — *Bachelor of Engineering(BE) - Computer Science & Engineering*

June 2014 - July 2018

Mary Giri Senior Secondary School, Trivandrum, Kerala — *Higher Secondary Education*

June 2012 - March 2014

PROJECTS

ALLIANZ TECHNOLOGY

ASPACE — **Java and Angular Full Stack**

Oct 2021 - Present

ASPACE is an accounting application used in the Allianz Reinsurance Section. It makes use of file upload particularly Excel files and reading, validating the data and filing the claims accordingly.

I have worked on maintaining and adding additional features to the application to make it better and efficient. I have worked primarily on the

TECHNICAL SKILLS

Java, RestAPI,
Spring Boot, Hibernate
MS SQL Server, Firebase
OPCUA, Angular, Jenkins,
Azure

backend and secondarily on the frontend. I have also worked on the CI/CD deployments using Jenkins and Azure cloud services.

Tools: [Spring Boot](#), [Angular](#), [PostgreSQL](#)

Interface Monitor — [Java and Angular Full Stack](#)

Oct 2021 - Present

Interface Monitor was a web-based application to display the errors in any submissions of documents among different sections of the Allianz Reinsurance Sector.

I have worked on the Java Server side changed with regards to migrations from Oracle DB to Postgres. I have also worked on the frontend and Backend functionality changes and important critical bug fixes made within critical periods.

Tools: [Spring Boot](#), [Angular](#), [PostgreSQL](#)

Bike Safe Tower — *Java Server Backend*

Feb 2019 - Oct 2021

Bike Safe Tower is an Android application with a Java Backend Server. It is used to control the process of a parking tower for bicycles. The user can create an account in the application and use it to control the tower and park his bike and pay for the parking and release it.

I implemented the server for the application which had various components of communication. The communication between the parking tower and the mobile consists of various elements. The parking tower is controlled using a PLC. The PLC is communicating to the Java Server using a medium called OPCUA Server. The Java Server is built with an OPCUA client built in to communicate with the OPCUA server. Implementing this communication was very important for the project. We used OPCUA node listeners and Firebase Realtime database for faster responses between the tower and the Server.

Tools: [Spring Boot](#), [Hibernate](#), [Firebase](#), [OPCUA Server & Client](#)

Bike Safe Tower Management Tool — *Java Server Backend*

Feb 2019 - Oct 2021

Bike Safe Tower Management Tool is a web application. It is used to manage the data of the Bike Safe Tower application. The administration of the tower uses this tool for getting information about the usage of the bike safe tower.

I implemented the BikeSafeTower Management Tool's backend Java Server. I used Hibernate to fetch the data from the SQL Server database and was interpreted to form meaningful analysis for responses to the APIs.

Tools: Spring Boot, Hibernate, Firebase, OPCUA
