Work Experience

Software Engineer I Konverge.AI

Nov-20 Till Date

Project 1

Domain: Database Management Tool

Tech Stack: NodeJS, Typescript, Express, NestJs, MySQL, MongoDB, React MUI, Jotai, ReactQuery.

Description

Say goodbye to juggling databases and operations.

Platform that brings multiple databases together in one accessible channel. We prioritize ease of use, simplifying complex tasks.

- Our solution handles connections, CRUD operations, and generic functions for a seamless workflow.
- Enjoy concurrent connections, a user-friendly interface, and a lightweight workflow.
- Dbex supports import/export for MySQL and MongoDB with BSON, JSON, CSV, and SQL. Simplify your database management with Dbex today and experience streamlined efficiency.

Project 2

Domain: Manufacturing

Tech Stack: Angular, Typescript

Description

Golden Production Run is a platform built for the manufacturing industry to bridge the gap between planning and real time production events by offering the macro perspective of the production lifecycles.

It allows you to schedule the process steps and technical steps for production operations to align the strategic goals.

It lets you upload the summary data and sensor data of the history files to optimize the manufacturing process.

- It offers the reduction in cycle times by collecting, connecting and analyzing data from every point of the process
- Worked on Responsive UI, Tree manipulation of data, File upload configure & customized field sets.
- Developed components for plants and its data management features.
- Designed the complex bulk data tree for seamless workflow.

CERTIFICATIONS

ICSI: CNSS Certified Network Security Specialist.
Lynda Learning: DevOps Certification.
META Full Stack Engineer: (Persuing)

EDUCATION

Masters of Computer Applications (MCA)

Shri Ramdeobaba College Of Engineering And Management, Nagpur.
06-17 - 05-20

Bachelor Of Science
Sri Shivaji Scinece College, Nagpur
06-13 - 06-17

XII'th
New English Junior College, Nagpur
02-12 - 04-13

X'th
New English High School, Nagpur
04-10 - 05-11

Position's Of Responsibility:

- **Ex-Founder & CEO @ GroLocal:**

Successfully launched B2B2C MVP for a thriving business. Streamlined operations between businesses and end consumers, creating a seamless marketplace.

- **Manager at Sports Complex:**

Managed More than 15 sports activites with 16% CAGR

- **Financial Markets Expert:**

Working as a financial expert in Tarding & deliveries

Project 3

Domain: Medical Document Management

Teach Stack: [ReactJS](#),[Material-UI](#),[react Query](#), [Jotai](#), [React-Timer](#).

Description

Introducing our hassle-free Medical Document Management System: A comprehensive solution for storing, capturing, and organizing medical records.

- Our system effortlessly converts PDFs, PNGs and JPEGs into searchable text, enabling convenient data retrieval across files.
- Users can perform CRUD operations and effortlessly manage information.
- For enterprise-level users, the system allows seamless addition and editing of data. Experience streamlined medical record management and enhanced efficiency with our user-friendly and powerful Document Management System.

Project 4

Domain: Manufacturing

Teach Stack: [Next Js](#),[Material-UI](#),[React Router](#)

Description

Introducing our Plant Management System: efficiently managing plants across the city.

- Track capacity tanks and materials using sensors and meters. Seamlessly add, edit, and view bulk data for hassle-free operations.
- Our responsive application works across all dimensions, ensuring accessibility. Developed plant components and data management features.
- Designed a complex bulk data tree for a seamless workflow. Experience streamlined plant management with our comprehensive system.

Project 5

Domain: Manufacturing

Tech Stack: [ReactJs](#), [React-Diagrams](#),[MongoDB](#)

Description

This project focuses on the assembly and development of mechanical parts sourced from various vendors.

- The assembly line is closely managed and monitored, with detailed data formulation for user convenience.
- The architecture ensures seamless operations within defined parameters, enhancing overall productivity.
- The diagrammatic assembly line visualization was achieved using React storm and React Flow diagrams. Additionally, components for assembly line data manipulation were developed using Material-UI and JavaScript, ensuring efficient workflow and user interaction.

Founder - Grolocal

June- 19 to Oct-20

Domain: B2B2C

TeachStack:[ReactJS](#),[MaterialUI](#),[reactQuery](#),[Jotai](#),[Node.js](#),[Aws](#),[Express.js](#),[Mongodb](#),[redis](#).

Description

- Our B2B2C startup empowers small grocery shops and mom & pop stores in tier 2 and 3 cities by enhancing their discoverability, providing discounted products, and facilitating efficient e-mobility delivery solutions.
