Quality Analyst

PROFILE

With 3 years of experience in both manual and automation testing, I am a skilled Quality Engineer committed to ensuring high-quality standards for complex applications. I excel in performing comprehensive application testing and identifying bugs early in the development process. Additionally, I provide detailed root cause analysis to support the development team. Proficient in leveraging tools like Selenium, Playwright, Cypress, and UiPath for automation, I bring strong technical expertise to validate complex functionalities and maintain product quality throughout all testing phases.

WORK EXPERIENCE - IBM | OCT 2021-PRESENT

Quality Analyst

Storm, IBM | Jan 2022 – Present

Description: The Storage Modeller (StorM) is an IBM sales tool designed to model storage solutions for customer applications. It is intended for use by IBM and Business Partner technical sellers

Responsibilities:

- As a Quality Engineer, I am responsible for performing both manual and automation testing to ensure the quality in every release.
- I design and execute the automated test scripts to increase efficiency and coverage.
- When issues arise, I thoroughly analyze the root cause and collaborate with the development team to identify solutions.
- I also address challenges encountered during automation development by optimising test scripts.
- By replacing manual tests with automation solutions, I work to reduce manual effort and accelerate the testing process, ensuring a faster and more reliable release cycle.
- My focus is on continuous improvement, providing robust testing solutions, and maintaining high-quality standards throughout the development lifecycle.

Tools & Technologies Used:

Languages: Python, Java, Javascript, Powershell script

Automation tools: Selenium, Playwright, IQP (Ignite Quality Platform)

Test Management: Jira

CI/CD: Jenkins

Testing techniques: Functionality testing, regression testing, Integration testing, Performance testing, Accessibility testing

EDUCATION

B.Tech - Electronics and
Communications
JNTUHCES
2017-2021

TECHNICAL SKILLS

- Selenium
- Python
- Java
- UiPath
- Playwright
- Cypress
- Jenkins

CERTIFICATIONS

Full stack Automation
tester
UiPath Automation
developer associate

AAQE

Duration : Aug 2023- Jan 2024

Description :

- AAQE is a utility designed to generate test cases, test scripts, and test data from user stories or requirements documents
- It also enables the conversion of test scripts from one language to another using IBM's GenAI
- I was involved in the development of this utility, where I utilized Python for backend development
- My contributions included generating BDD scripts from test steps and implementing the functionality to convert test scripts between different programming languages.

Tools and technologies:

- Python-flask, IBM watsonx models

Data Migration

Duration : Sept 2022 - June-2023

Description :

- This utility was developed to facilitate data migration between applications or across different environments
- I used Python for the development and gained a basic understanding of CouchDB in the process
- The utility was specifically designed for IQP users who encounter challenges in migrating data. By automating the entire migration process, we significantly reduced both manual effort and time required for the task.

Tools and technologies:

- Python, HTML, CSS

S2P

Duration: Mar 2022-May 2022

Description:

- I have conducted a PoC to automate the testing process for various functionalities within a procurement process platform. This includes tasks such as adding user or supplier details, submitting requests, and validating the approval or rejection workflows. I generated optimized test cases, wrote the corresponding test scripts, and automated them using Selenium and the IQP tool

Tools and technologies:

- Java, Selenium, IQP
