

Summary

System Engineer with 3 year of experience in NextGen R&D group of projects and APTIV ,ERICSSON Client project. Hands-on knowledge of Code Coverage Tools Has a working Knowledge of LLVM compiler ,infrastructure and its sub projects ,LLVM Testing Infrastructure. Experience on design and working of compilers, Compiler switches ,Design and developing the AXE Ericsson applications.

Skills

C++

Core Java Programming

LLVM and GCC Compilers

Linux System Administration

Enux(OS)

plex

Education

Appa Institute of Engineering and Technology, Visvesvaraya Technological University (VTU)

B.E - Computer Science and Engineering

Jul 2021

Gulbarga,
Karnataka

ShreeGuru Vidhya Peetha

Intermediate, CGPA: 70

Jun 2017

Gulbarga,
Karnataka

Gautami Model School

Secondary School Certificate, CGPA: 8.2

May 2015

Tandur, Telangana

Experience

Tata Consultancy Services

System Engineer Nov

2021 - Present

Hyderabad,
Telangana

Projects

Native Compiler Toolchain for RISC-V Architecture:-

Description:

The scope of this POC is to develop a LLVM native C/C++ compiler for RISC-V architecture. Cross compiled LLVM toolchain to build native compiler for RISC-V architecture which is simulated using QEMU interface, tested the compiler performance and feature. **Roles & Responsibilities:**

Cross compiling the LLVM source code and building the native C/C++ compilers for RISC-V architecture.

Tested C,C++ codes by linking targeted directories where the binaries have been and generating a native compilation command for RISC-V.

Research on various cross compilation flags and coverage tool for the performance of sample codes. Resolving the errors that occurred while native compilation.

Technology: C++ ,GNU RISC-V,LLVM,LINUX,QEMU, Cmake.

INASO:-

Description:

The aim of the POC was to develop a script for generating the report on testcases generated for LLVM test-suite and used the cmake tool to configure the test suite. Used the cmake option to specify the compiler to test and then build the benchmarks to run the tests with llvm-lit tool, used llvm-cov tools to know the execution time of class, method for each test case in sequence order.

Roles & Responsibilities:

Generated the report on testcases for LLVM test-suite.

Tested and build the benchmarks to run the tests with LLVM-LIT tool.

Test case validation using code coverage tool.

Technology: C++ ,LLVM-LIT ,Linux, Profiling tools ,Cmake ,LLVM Test Suite.

AXE ERICSSON:-

Description:

The aim of the project is to develop BSC, MSC, HLR the applications based the customer requirements, developing the APZ architecture package, replicating and verification to CP maintaining the live traffic for the application. **Roles**

& Responsibilities:

Stack lunching ,configuring and building the packages for the node. Initiating and maintain the traffic over the nodes based on the applications.

Handling the customer TR for Plex language performance of applications issues.

Technology: Plex ,EnuX(OS) ,Winfiol ,Plexview ,C++ ,Sea tool.
