

RUSHABH YEDAGE

Embedded Design Engineer | Linux Kernel and BSP Development

+91 7350196400 | rushabhyedage5@gmail.com | www.linkedin.com/in/rushabh-yedage-0920a2243

Summary

Experienced Embedded Design Engineer skilled in BSP development, Yocto for kernel builds, driver development and diverse Communication Protocols. Strong background in Linux kernel development, contributing to projects.

Skills

- C- Programming, Microcontroller Programming and Interfacing, Operating Systems , Device Drivers development
- Shell Scripting, OS fundamentals, Communication Protocols - I2C Debugging of BSP SPI UART etc.

Experience

Mistral Solutions Pvt Ltd

Bangalore, Karnataka

Embedded Design Engineer - Software design

05/2023 -

Present

- Linux device driver and android BSP development and debugging .
- Development of drivers on the Qualcomm platform.
- Utilizing the Yocto system to build kernel images .
- Extensive experience in Linux kernel development, with notable contributions to projects involving Renesas RZ1ND and Qualcomm processors.
- Proficient in Shell scripting for automation testing.
- In-depth study and implementation of Communication Protocols interfaces, including I2C, SPI, PCIe and ADC.
- Designing and implementing C applications for testing purposes.

Project Summary

- Bringup of PCA9500 EEPROM/GPIO Expander via I2C and Creating C Application for Validating EEPROM.
- Bringup and validation of the IMX708 camera driver on the Qualcomm platform.
- Bringup of Telit FN990 5G Modem with Qualcomm-based Boards and Validation .
- Bringup and validation of Perciom PI7C9X2G304 PCIe to Ethernet device on Qualcomm-based.
- Bringup and testing of the Melaxis MLX90640 thermal camera interfaced through I2C.
- Creating Recipes in Yocto for Adding Prebuilt Packages in File System.

Education

Sunbeam Institute of information technology - CDAC

Post Graduate Diploma in Embedded System and Design

09/2022 - 03/2023

Karmaveer Bhaurao Patil College Of Engineering, Satara

B.Tech - Electronic Engineering

07/2018 - 06/2022

ACADEMIC PROJECTS

Weather monitoring using STM32 and ESP8266

01/2023 - 02/2023

- Developed a compact Weather and Pollution Monitoring System utilizing STM32, ESP8266, LM393, MQ2 sensors, and interfaced through ADC.
- STM32 facilitated efficient data processing via STMCubeIDE, while ESP8266 enabled wireless communication.
- Employed STMCube IDE and Arduino IDE for coding. The system delivers real-time environmental data for enhanced monitoring and sustainable solutions.

Liquid Volume Measurement Using Pressure Sensor and ARM LPC2148

03/2022 -

05/2022

- Liquid volume measuring system using a pressure sensor ,is a system which will inform the users about the quantity of liquid in the tank.
- Pressure sensor is used to measure the pressure of liquid and it can calculate the volume of liquid. The system makes use of ARM family microcontroller, LCD screen and 12V transformer.

Courses & Certificate

- 1) Advanced in C programming
- 2) Introduction to IOT
- 3) Introduction to Data Science and machine Learning
