Work Experience

Mouritech Pvt Ltd

May 2021- Mar 2023

Senior Specialist

Client - Lenovo PC HK Limited

Location: Hyderabad/Bengaluru

Lenovo's Resolve is a web and mobile app enabling customers to log issues, upload defect images, and get service. Engineers address tickets, while admins approve, reject, or request more details.

- Understood and evaluated the business's needs.
- Created manual test scripts that were appropriate for the business's functions.
- Executed the test cases for functional validation.
- Postman was used for API validation.
- Tested for smoke at the start of each cycle of release.
- JIRA was used to track and log bugs, and regression and retesting were conducted.
- Conducted production testing during the release period.
- Created progress reports on a regular basis.

WalkingTree Technologies

December 2020 – February 2021

Senior Test Engineer

Client - Origo Finance e-Auction

Location: Hyderabad

Origo Finance e-Auction is a web and app platform where admins and traders bid on commodities, helping farmers market their products effectively.

- Completed test plans, including manual test cases, were designed, developed, and carried out.
- Used Postman to test APIs to make sure they integrated and worked properly.
- Worked in cross-functional teams and produced process documentation in Agile environment.
- Guided junior testers by instructing them best practices and testing procedures.
- Responsible for defect tracking and correction, guaranteeing quality throughout the whole project lifecycle.

Mindtree India Pvt Ltd

March 2013 - May 2020

Senior Test Engineer

Client - Commerce Clearing House (CCH)

Location: Hyderabad

Commerce Clearing House, a Wolters Kluwer business, provides software solutions for tax, accounting, and audit professionals. It publishes information on U.S. tax law and tax compliance.

- **System functioning was examined to comprehend needs and Prepared test cases and scenarios**
- Tested browser compatibility and ad hoc functionality on a variety of builds and webpages.
- Utilized Postman to do API testing and used JIRA to track and report development, functional, and project concerns.
- Used a checklist and the essential regression scripts.
- Created test plan, status reports for clients on a daily and weekly basis, and consolidated final reports.

Client - Capillary SI

Capillary technologies is an E-Commerce product based company and has its product names Martjack. It is the control panel for many merchants, and it is a platform to control the design and product listing for many merchants.

- Using TestRail, I created thorough test plans and thorough test cases based on system needs and specifications.
- Used applications such as JIRA to carry out manual test cases to verify the application's functionality, performance, and user experience.
- Used JIRA to identify, track, and document faults; this allowed for efficient communication with development teams to ensure prompt resolution.
- Using Microsoft Office, created and maintained test plans, test cases, and test reports.
- Worked together to resolve any difficulties and agree on testing requirements with developers, product managers, and other stakeholders using communication platforms like Microsoft Teams.

Client - Microsoft Store Storefronts and Internet Explorer

Microsoft's online store for its products and services requires evaluating domains for compatibility with specific browsers and operating systems. The project involves assessing, understanding, and addressing compatibility issues for websites across various regions and languages, using test scenarios from Microsoft. Websites are tested for compatibility with browsers like Microsoft Edge, IE10, IE11, Chrome, Firefox, and IE12, on operating systems including Windows 7, Windows 8, and Windows Blue.

- **Created manual test scripts using business requirements and performed compatibility, UI, and functional testing.**
- Conducted regression, ad hoc, and smoke testing to ensure thorough coverage across various test scenarios and website genres.
- Using Product Studio, Visual Studio, and Swagger, I monitored defects, prepared defect summary reports, and shared my results with team members.
- I thoroughly verified, eliminated, and tracked CVList IDs, examining their underlying causes and offering comprehensive bug details.
- Created and disseminated daily status updates regarding the completion of tasks and test results.
- Worked closely with developers and QA team members to review peer defects and address defect issues, guaranteeing efficient resolution and quality control.
