PROFILE SUMMARY

- Dynamic and result-oriented IT professional with **9+ years** of experience in **full-stack development**, specializing in building scalable web applications, RESTful APIs, and responsive user interfaces.
- Expertise across **React.js, React Native, Angular, Node.js, Python, ASP.NET**, and modern **cloud services** including **AWS** and **GCP**.
- Proficient in **modern JavaScript (ES6+), TypeScript**, and frontend libraries like **Tailwind CSS, Material UI**, and **Styled Components** for building high-performance UIs.
- Practical experience in **GraphQL** APIs and **Single Sign-On (SSO)** or **token-based authentication** mechanisms such as **JWT** and **OAuth**.
- Strong background in **software design principles, API security, distributed system architecture, system integration**, and **cloud-native** solution development.
- Skilled in developing **tested, idiomatic, and documented** code using tools like **JSDoc**, with experience in **unit testing** frameworks including **Jest** and **React Testing Library**.
- Familiar with **frontend build pipelines and tools** (Webpack, Babel, Vite), **version control** (Git, GitHub, Bitbucket), **remote deployment tools**, and **DevOps** practices.
- Expertise in **React core principles** — including **components, hooks, lifecycle methods, state management** using **Redux, Context API**, and optimizing frontend applications for **high performance and scalability**.

ORGANISATIONAL EXPERIENCE

EXAFLUENCE : Jan-2019 – Nov-2024

Worked as a **Lead Software Engineer** in **Exafluence Global Analytics Pvt Ltd**, Tirupati since 2019 to 2024.

TechZee Infotech Pvt Ltd:

Worked as a **Web Developer** in **TechZee Pvt Ltd**, Bangalore since 2016 to 2019.

PinkLotus Infotech Pvt Ltd:

Worked as a **Web Developer** in **PinkLotus Pvt Ltd**, Bangalore since 2014 to 2016.

🔗 Backend:	Python, Node.js, Express.js, ASP.NET, MVC5, Laravel, CodeIgniter
🔗 Frontend:	React.js, React Native, Angular, AngularJS, JavaScript (ES6+), TypeScript, HTML5, CSS3, Bootstrap, Tailwind CSS, Material UI, Styled Components
🔗 Cloud/DevOps:	AWS, GCP, Docker, Kubernetes, CI/CD GitLab, Google Cloud Functions, IAM
🔗 Database:	MongoDB, MySQL, SQL Server, PostgreSQL
🔗 API Technologies:	REST, GraphQL, OAuth2, JWT, FHIR, HL7
🔗 State Management	Redux, Context API
🔗 Testing Tools	Jest, React Testing Library, Cypress

PROJECTS

Project 1: Solovis Data Client SDK

Description:

Developed a client SDK to interact with Solovis Data Environment API using RPC over HTTP, focused on portfolio data visualization and analytics.

Responsibilities:

- Built interactive React components for dashboards displaying investment data.
- Integrated APIs with React frontend using JWT authentication.
- Managed state efficiently using Redux and React Context API.
- Wrote integration guides and reusable components for SDK users.
- Performed frontend testing with Jest, React Testing Library, and Cypress.

Environment:

Visual Studio IDE, React, Python, SQL Server, postgresql

Team Size: 4

Project 2: Cloud Functions Engineer for BigQuery Data Backup and Restore

Description:

Developed an automated system to backup and restore Google BigQuery datasets using serverless Cloud Functions.

Responsibilities:

- Developed Python-based Cloud Functions for backup and restore operations.
- Automated scheduled backups with GCP Cloud Scheduler.
- Integrated IAM roles for secure access.
- Supported both full and incremental backup strategies.

Environment:

Python, FastApi, BigQuery, GCP Cloud Functions

Team Size: 2

Project 3: GeoAccess

Description:

Location-based application calculating distances between service providers and members to optimize logistics and service coordination.

Responsibilities:

- Developed backend APIs using Node.js for real-time distance calculations.
- Built modular and reusable React components for location listings and maps.
- Integrated React Native to extend features to mobile apps.
- Handled unit testing and debugging for cross-platform compatibility.

Environment:

Visual Studio IDE, ReactJS, Python, NodeJS, React Native, MongoDB, AWS

Team Size: 2

Project 4: MyPhysician360

Description:

A digital health platform offering telemedicine, patient health tracking, AI-driven insights, and provider-patient communication.

Responsibilities:

- Designed and developed Angular-based responsive UI for patients and providers.
- Integrated appointment scheduling, health records, and remote consultation features.
- Performed unit testing, debugging, and optimization for Angular modules.
- Used Visual Studio for Angular development.
- Containerized the Angular frontend using Docker for consistent environment setups.
- Deployed frontend services on Kubernetes clusters for scalability and high availability.

Environment:

Visual Studio IDE, Angular, ASP.Net, SQL Server

Team Size: 5

Project 5: FHIR Integration for Healthcare Interoperability

Description:

Implementation of HL7 FHIR standards to facilitate secure healthcare data exchange and integration of SMART on FHIR apps.

Responsibilities:

- Designed FHIR-compliant REST APIs using ASP.NET and Node.js.
- Integrated React UI components for visualizing patient records.
- Implemented SMART on FHIR authentication (OAuth2-based).
- Ensured strict HL7 FHIR compliance and error handling.
- Dockerized APIs and React modules for flexible deployment across environments.
- Managed deployment, scaling, and load balancing of services using Kubernetes.

Environment:

ASP.Net, Node.js, ReactJS, MongoDB, SQL Server, FHIR, HL7, OAuth2, GCP, Docker, Kubernetes

Team Size: 6

Project 6: QCC Portal

Description:

A Quality Control platform for automating status monitoring, approvals, report generation, and worker evaluations across projects.

Responsibilities:

- Developed full-stack solutions using ASP.NET MVC for backend and Angular for frontend.
- Designed role-based access control for various user levels.
- Wrote complex SQL queries and optimized database performance.
- Containerized Angular frontend and ASP.NET backend with Docker.
- Used Kubernetes for production deployment and auto-scaling.

Environment:

ASP.NET, MVC, Web-API, Angular, SQL Server, MSSQL

Team Size: 4

Project 7: Client Content Management System

Description:

A centralized system for managing website and mobile application content dynamically via database-driven React interfaces.

Responsibilities:

- Designed and developed React-based UIs for content management workflows.
- Integrated SQL Server for database operations and dynamic content fetching.
- Supported AWS-based deployment strategies.

Environment:

Visual Studio IDE, React Native, ReactJS, SQL Server, AWS

Team Size: 4

Project 8: DHSQ (Daily Health Screening Questionnaire)

Description:

A mobile-friendly application for daily employee health status reporting, complying with corporate and government COVID mandates.

Responsibilities:

- Designed and developed UI screens using ReactJS and React Native.
- Connected application with MongoDB to store questionnaire results.
- Ensured security and privacy of employee health data.

Environment:

Visual Studio IDE, ReactJS, React Native, MongoDB, AWS

Team Size: 4

Project 9: SCMXpert

Description:

Real-time shipment tracking and predictive analytics platform aggregating device data across global supply chains.

Responsibilities:

- Built frontend dashboards using ReactJS, Bootstrap, and jQuery.
- Connected frontend to backend services developed in Java.
- Integrated MongoDB for real-time data streaming.

Environment:

Visual Studio IDE, ReactJS, Bootstrap, jQuery, MongoDB, AWS

Team Size: 4

Project 10: UseOpend

Description:

Email marketing platform enabling real-time and scheduled campaigns, AB split testing, and campaign analytics.

Responsibilities:

- Designed and built dynamic ReactJS interfaces for campaign management.
- Integrated backend APIs for billing, analytics, and campaign scheduling.
- Ensured responsive design and optimized database structures.

Environment:

PHP, MySQL, ReactJS

Team Size: 4

Project 11: EthereumPlus

Description:

Cryptocurrency platform offering secure trading, storage, and smarter interaction interfaces for blockchain users.

Responsibilities:

- Developed backend pages using CodeIgniter and MySQL.
- Built ReactJS-based interactive frontend interfaces.
- Implemented client-side validations and database integration.

Environment:

MySQL, CodeIgniter, ReactJS

Team Size: 4

Project 12: SynaxisBeta

Description:

An educational platform providing funded courses to students, managing multiple user roles (admin, tutor, claim handler).

Responsibilities:

- Developed ReactJS frontend and backend APIs using CodeIgniter.
- Designed and optimized MySQL database schemas.
- Implemented user validation and access rights logic.

Environment:

MySQL, CodeIgniter, ReactJS

Team Size: 4

Certifications

- MongoDB Certified Developer Associate
 - Demonstrated expertise in MongoDB fundamentals, including CRUD operations, indexing, aggregation, replication, and sharding.
- SI-Architect Certification
 - Validated advanced knowledge in systems integration architecture, focusing on design, deployment, and optimization of complex IT systems.
- SimplyLearn DevOps Training Certification
 - Competence in DevOps tools and practices, including CI/CD pipelines, automation, and cloud services.

ACADEMIC SUMMARY

- **B. Tech in Information Technology from JNTU-A, Andhra Pradesh.**

DECLARATION:

I consider myself familiar and confident with Engineering and Web Application Aspects. I hereby declare that the above furnished information is true to the best of my knowledge.

Rajasekhar K
