

PROFILE

With **5.2 years of experience** in the IT industry, I specialize in **MERN Full Stack Development**, leveraging **Docker, GitHub Actions CI/CD, and AWS** for scalable and efficient deployments. My expertise lies in understanding client requirements and delivering tailored solutions.

I have hands-on experience in building **Single Page Applications (SPA)** using **HTML5, CSS, Bootstrap, and JavaScript (ES6)**, with a strong focus on **ReactJS**. My ReactJS skills include **Props, Redux, Higher Order Components, Hooks, React State, React Context, and Lazy Loading** for optimized performance.

Additionally, I excel in **client interaction, requirement analysis, and team coordination**, ensuring smooth collaboration between development and testing teams. My backend proficiency includes **Node.js, Express.js, and MongoDB**, leveraging **Postman for API testing** and implementing **real-time technologies** to build robust web architectures.

SOURABH BASARIKATTI

MERN WEB DEVELOPER WITH 5.2YRS EXP

PHONE: 7208615760

EMAIL: basarikattisourabh4410@gmail.com

EDUCATION

- BE at **Sanjeevan Enginee4.3ring & Technology Institute.**
- PUC at **N B Patil Jr College**
- SSLC at **STVS, SHIVANGE**

WORK EXPERIENCE

- **Datamatics Global Services Ltd. Software Consultant**
Aug 2023 – May 2025
- **Audviklabs, Technical Developer**
Dec 2022 – Jul 2023
- **Zensar, Application Developer**
Feb 2020 – Nov 2022

SKILLS

Frontend Development:

ReactJS, Redux, HTML5, CSS3, Bootstrap, JavaScript

Backend & Database:

Node.js, Express.js, MongoDB, PostgreSQL, MySQL

API Development & Testing:

RESTful APIs, Postman

DevOps & Cloud:

Docker, GitHub Actions, AWS (EC2, RDS, S3, Route53, Security Groups)

Version Control & Project Management:

Git, Jira, Build Tools & Package Managers: Babel, NPM, Yarn

PROJECTS

I. Nordea Banking Web Application

Built a web-based onboarding platform for Deutsche Bank's IT infrastructure using the **MERN stack (MongoDB, Express.js, React.js, Node.js)** to streamline personal loan customer registration. Developed secure **APIs** with **JWT authentication** and **RBAC** to protect sensitive banking data. Automated onboarding workflows including KYC verification and fraud detection using AI-based modules. Enhanced application performance by optimizing the Node.js event loop and integrating **multi-factor authentication (MFA)**. Enabled seamless operations with real-time analytics dashboards, CRM integrations, and **third-party financial APIs** to support both Relationship Managers and Operations teams.

II. Ohio UI Insurance Application

Designed and developed a **full-stack web application** to assist unemployed individuals in accessing their unemployment insurance benefits. Leveraged the **MERN stack** to build a **responsive user interface** and a **scalable backend system** that handled user registration, eligibility checks, and benefits disbursement. Implemented **RESTful APIs** for secure data exchange and integrated form validation and error handling to ensure smooth user interactions. Employed state management and **reusable components in React** to streamline workflows for applicants and support teams. Ensured application reliability with robust backend services and effective database design in **MongoDB**.

ROLES & RESPONSIBILITIES

- Integrated UI dynamically with backend APIs, ensuring seamless data flow and responsive user experience using React.js.
- Developed single-page applications (SPAs) using ReactJS, HTML5, CSS3, and JavaScript with responsive layouts.
- Used Bootstrap and Material UI to design mobile-friendly, clean, and interactive interfaces.
- Built dynamic web components using advanced React features such as Hooks, Context API, and React Router.
- Implemented secure authentication flows using JWT and OAuth strategies via Passport.js middleware.
- Designed and developed scalable RESTful APIs using Node.js and Express.js, following best coding practices.
- Worked with MongoDB for efficient schema design, query optimization, and high-volume data handling.
- Created reusable React components to promote consistency and maintainability across the application.
- Utilized Redux for state management, handling complex data flows and asynchronous actions.
- Developed responsive designs using media queries, ensuring optimal UX on all screen sizes.
- Followed modular and component-based architecture to maintain clean and reusable code.
- Implemented unit and integration testing using tools like Jest and React Testing Library.

- Improved performance by lazy loading components and implementing code splitting in React apps.
- Implemented CORS policies and rate limiting to secure backend APIs and prevent abuse.
- Containerized applications using Docker for consistent development, testing, and production environments.
- Built and configured Dockerfiles and Docker Compose to simplify multi-container orchestration.
- Integrated CI/CD pipelines using Jenkins and GitLab CI/CD to automate build and deployment.
- Deployed applications on AWS EC2 instances with proper configuration of security groups and IAM roles.
- Managed cloud file storage using AWS S3 buckets and optimized file access via lifecycle rules.
- Configured DNS and domain management using AWS Route 53 with health checks and routing policies.
- Used Git for version control, effectively managing branches, pull requests, and conflict resolution.
- Collaborated with DevOps teams for end-to-end deployment pipelines and rollback strategies.
- Optimized MongoDB queries using indexes and aggregation pipelines to improve API performance.
- Used Postman for automated API testing, collection management, and documentation.
- Integrated third-party services and APIs (e.g., payment gateways, Firebase, SendGrid) into MERN stack apps.
- Converted wireframes and UI designs from Figma/Adobe XD into functional, pixel-perfect code.
- Created custom React hooks for reusability and better code management.
- Participated in Agile ceremonies (Scrum, Sprint Planning, Retrospectives) to align with project goals.
- Developed scalable microservices using the MERN stack, contributing to robust and maintainable architecture.
- Created reusable components and front-end libraries for future use, aligning with DRY principles.
- Developed APIs with robust security, following REST principles and incorporating best practices.
- Worked with DevOps engineers for integration of Git with CI/CD pipelines to automate deployments.
- Stored and managed static assets using AWS S3, optimizing storage and access.
- Managed application availability using AWS Route 53 configurations for routing and health checks.
