Working Zone – Organization:

- Currently working as Quality Analyst **HexawareTechnologies** ,Banglore since Aug 2021 to till date.

TECHNICAL SKILLS:

- Operating Systems Windows 95/98/2000/NT/XP, UNIX, Linux
- Languages:-Python, SQL, MongoDB
- Libraries:- Selenium, Cypress, Robot , Mysql
- Testing Tools:- REST ,Putty
- Bug Reporting:- JIRA,HPALM
- Database Tools:-My SQL, PostgreSQL, MongoDB
- Basics on Pytest and Falsk Frameworks
- Web service tools/Technology REST, JSON, POSTMAN

Project Sequence 1

Project Name: MVNO & MVNE billing and charging solution

Vertical : Telecom BSS, Amdocs CRM

Client : GCI Communication Corporation, USA

Duration : 1.6 year

Detail Project Overview and Workflow:

GCI' MVNO & MVNE billing and charging solution, allows an MVNO to implement its own plans and promotions. As the MVNO grows, it can offer branded services to other newly launched MVNOs by expanding its billing platform, thus transforming itself into a full-fledged MVNE.

- Carrier-grade, out-of-the-box, convergent charging and real-time billing services for prepaid and postpaid
- Rapid time-to-market for new products and services
- Simple and seamless integration with network elements and VAS
- Multi-language, multi-currency support on a single billing platform
- Service and pricing tiers supported using policy control and charging tools (PCC – PCRF)
- Fully configurable and expandable to meet the needs of any business process
- Highly scalable – ideal for greenfield MVNO and for IoT MVNO operators

Project Sequence 2:-

Project Title : Products Analytics with recommendation engine- PARE

Client : Marks & Spencer, United Kingdom

System/Component : Payment ,E- commerce ,CRM

Duration : 2+ years

Project Description :-

Ecommerce Products analytics is the process of gathering data from all areas that have an impact on user online store and using this information to understand the trends and the shift in consumers' behavior to make data-driven decisions that will drive more online sales. Price and stock information about business competitors and where Business are positioned against them price-wise is a very important data point user need to consider if user want to compete in the e-commerce space. Product analysis allows user to understand which products and product lists are performing, why they're performing or underperforming, as well as what you can do to optimize sales. Product matrices such as Number of products, Number of active products, Gross Margin, Number of Reviews, Product detail views, Product add to carts, Product removes from cart, Product conversion rate are vital element for business...
