Objective:

A professional DevOps Engineer with 6 + years of experience in supporting, automating and optimizing deployments and a proven track record in Big Data and Cloud technology. Cloud SRE/Engineer with applications utilising services such as Cloud functions. Eager to join a progressive company where I can apply my technical skills and innovative mindset to streamline processes and support data-driven decision- making, and be a part of the team that dynamically works towards the growth of the organization.

Technical Skills:

Skills	Remarks
Operating Systems	Linux, Windows & macOS
Languages	Shell Scripting, YAML, SQL & Python
Release Management Tools	Jenkins
Containerization	Kubernetes, Docker.
SCM	GIT
Build Tools	Louhi, Maven and Jenkins
Configuration Management	Ansible
Infrastructure automation	Terraform
Web/App Servers	Apache, Tomcat

Cloud technologies	AWS, GCP.
Big Data	Kafka, Spark, ELK stack, Hive, Sqoop, Flume, Hadoop, hdfs, & Airflow
Reporting tools	Cloudera Manager, Kibana, Grafana And Prometheus
Ticketing tool	Jira, SercviceNow
Databases	Oracle 10g/11g, SQL Server

Academic Education:

Bachelor of Engineering (B.E.)

Certifications:

- IBM HADOOP ADMINISTRATION
 - Elastic Search
 - Apache Kafka
 - Docker
- Associate Google Cloud
 - AWS Cloud Practitioner
 - Linux Foundation & System Administrator
 - Certified Kubernetes Administrator

Professional Experience:

Seconded to Google as TVC, at Bangalore from [Oct 2024 – Till Date]

Project	:	McD
Duration	:	Oct 2024 to till date
Role	:	Sr. DevOps Engineer
Client	:	Google(McDonald's)

Roles & Responsibilities:

- Worked on Source Code Management (Version Control System) tools like git and azure repository.
- Experience with automation/ integration tools like Jenkins.
- Collaborating closely with the team to support projects during all phases.
- Automated repeated manual tasks using shell scripting.
- Managed docker containers using docker-compose.
- Monitor and review the open issues/incidents/tickets on a daily basis.
- Good Knowledge of troubleshooting issues in Linux servers.
- Performed continuous Build and Deployments to multiple environments like Dev, UAT, Pre-Production, and Production.
- Using Shell Script to Create a database backup and run Cronjob to schedule automated scripts.
- Commitment to continuous improvement and automation of manual tasks.
- Experience as a Cloud SRE/Engineer with applications utilising services such as: • Cloud Build • Cloud Functions • GKE (Google Kubernetes Engine) • Logging • Monitoring • GCS (Google Cloud Storage) • CloudSQL • IAM (Identity and Access Management)
- A major focus on Kubernetes & CI/CD Administration. Designed end-to-end automation of infrastructure and continuous delivery of the applications by using Jenkins, ArgoCD and Kubernetes
- Verified pod-to-pod, pod-to-VM, and VM-to-VM communication, ensuring successful packet transmission and seamless network connectivity.
- Conducted VM and container networking tests to verify communication over VLAN 410 and VLAN 430 using secondary interfaces.
- Validated pod scheduling affinity and synchronization failures, improving Kubernetes cluster reliability and optimizing resource allocation.

**Sr. Software Engineer at Prodapt Solutions Pvt Ltd,
at Bangalore from [Dec 2022 – Sept 2024]**

Project	:	FinTech
Duration	:	December 2022 to Sept 2024
Role	:	Sr. DevOps Engineer
Client	:	PayPal

Roles & Responsibilities:

- Involved in client interactions and acknowledging their requests and ensuring that the best solution is provided within the specified SLA.
- Working on Source code management (SCM) tools like GIT.
- Experience with Continuous Integration tools like Jenkins and also proficient in pulling the code from Git repository.
- Experience working in an ITIL process-based environment.
- Working knowledge of container-based architecture and deployment (Docker, Kubernetes.)
- Experience in branching, tagging and maintaining the version across the environments.
- Resolving the build issue while running build jobs in Jenkins.
- Providing administrative support for Kubernetes and docker.
- Involved in performing Release Management and Release planning.
- Involved in writing playbooks to manage the different resources using ANSIBLE.
- Works closely with the network team, database team, Business Intelligence team and Application teams to make sure that all the big data applications are highly available and performing as expected.
- Experience in working with Agile methodologies and contributing to DevOps culture and practices.
- Provide guidance and mentorship to juniors, sharing your expertise and best practices to enhance the team's capabilities.
- Support engineering and operations teams in meeting infrastructure needs.
- Apply ETL techniques and frameworks for data transformation and integration.
- Experience in developing and tuning spark applications.
- Having good understanding of Ansible Server, and Ansible Client.
- Experience in working on AWS and its services like AWS IAM, VPC, EC2, EBS, RDS, S3, Lambda, ELB, Auto Scaling, Route 53, Cloud Watch, Cloud Trail, SQS, and SNS.
- Experienced in Cloud automation using Terraform to create custom sized VPC, subnets, NAT, EC2 instances, ELB and Security Groups.
- Built AWS-DevOps projects using CodePipeline tool with CodeCommit, CodeBuild & CodeDeploy
- Hands on experience in supporting environments using AWS.
- Involved in configuring different resources like IAM, EC2, S3, RDS etc.
- Having experience in using different storages like S3, EBS and RDS.
- Very good understanding of Roles and Policies.
- Involved in mailing configurations using SQS, SNS etc.

- Involved in application server configuration using configuration management tools.
- Configured different roles and policies to access different resources and control the access using policies.
- Good understanding of security groups and configured different groups to access EC2 Console
- Supporting high volume business days by accepting load using scale up option.
- Involved in monitoring of Cloud environments using Cloud Watch and respond to alerts.
- Involved in on-boarding applications for release management using Jenkins.
- Created Components, Resources, and Applications and group all configurations using Jenkins.
- Involved in Process Flow Design for performing release activities using Jenkins.
- Automated build process using automation tools like Jenkins.
- Involved in performing Release Management and Release planning.
- Providing on call, weekend and deployment support.

Big Data & Cloud Administrator at CGS Pvt Ltd, at Pune from [Feb 2019 - Nov 2022]

Project	:	Telecom
Duration	:	Feb 2019 to Nov 2022
Role	:	Big Data & DevOps Support Engineer
Client	:	Vodafone

Roles & Responsibilities:

- Hands-on experience in Big Data Administration consisting of Deployment, Configuration, tuning, Security, Monitoring Enterprise grade Cluster.
- Hands on experience in supporting environments using AWS.
- Involved in configuring different resources like IAM, EC2, S3
- Involved in start to end process of Hadoop Cluster wherein installation, configuration & upgradation
- Worked in High Availability environment.
- Deployed Cloudera Production grade cluster on AWS cloud environment.
- Experience in Linux based environments such as RedHat & CentOS.
- Experience in keeping track of jobs, monitoring important components of the cluster and troubleshooting cluster issues and ensuring good health of it and analyzing system/service failures and performing RCA on it to avoid impact on business.
- Shadowed solution architect for cluster and capacity planning.
- Very good understanding of Roles and Policies.
- Deployed all level security on Cloudera cluster with best practices.
- Job role involves performance tuning of Hadoop Cluster
- Solving High priority incident tickets within SLA.
- Experience in using multiple distributions of Linux.
- Works closely with the network team, database team, Business Intelligence team and

Application teams to make sure that all the big data applications are highly available and performing as expected. Supporting high volume business days by accepting load using scale up option.

- Involved in monitoring of Cloud environments using Cloud Watch and respond to alerts.
- Good understanding of data modelling and able to write SQL queries.
- Successfully managed the migration of large-scale datasets from on-premises Hadoop to GCP BigQuery, ensuring data integrity and minimal downtime.
- Conducted thorough data validation and quality checks post-migration to ensure accuracy and consistency in BigQuery.
- Analysis of the source data in Hadoop to identify data quality issues, redundancies, and patterns before migration.
- Collaborated with cross-functional teams to align migration efforts with business requirements and data governance policies
- Developed and executed validation procedures to compare source and target datasets, ensuring data integrity and identifying discrepancies during the migration process
- Applied necessary data transformations during migration to align with BigQuery schema requirements, optimizing the data structure for analytics.
- Generated detailed reports summarizing data quality findings and analysis results, providing actionable insights to stakeholders for future data management practices.
- Intermediate in Python programming language (Can read, edit and understand the code and the logic behind it).
- Involved in performing Release Management and Release planning.
- Configuring and Modifying service configuration for Optimization.
- Responsible for monitoring dfs health and ensuring good dfs health is always maintained.
- Involved in resolving tickets with different SLAs as per priorities.
- Providing on call, weekend and deployment support.
- Responsible for backing up data and ensuring High Availability of critical components like Namenode, Resource Manager Hadoop log management and other services.
- Troubleshooting issues on the basis of error available in the logs.
- Tuning Kafka parameters and configurations for optimal performance and efficiency, considering factors such as message throughput, latency, and resource utilization.
- Strong knowledge of Kafka platform, including hands-on experience with Kafka brokers, topics, partitions and replication configurations.
- Experience with Kafka monitoring and alerting tools such as Prometheus and Grafana.
- Experience in developing and tuning spark jobs.
- Deploying and supporting data intensive systems
- Expertise in working directly with the ELK stack
- Having Knowledge of cloud services such as Google Cloud and AWS.
- Building dashboards in Grafana and data validation/analysis in kibana.
- End to end pipeline debugging/troubleshooting.
- Involved in configuring Elastic configuration and configured auto scaling.
- Worked on various user requests as per the SLA driven by ticketing tool within the ITIL guidelines.
- Providing on call, weekend and deployment support.
