Associate II

**Mobile:** +91 9652269364

**LinkedIn:** [www.linkedin.com/in/ajay-durgam5542](https://www.linkedin.com/in/ajay-durgam5542)

**Location:** Hyderabad

**Email:** [ajaydurgam5542@gmail.com](mailto:ajaydurgam5542@gmail.com)

## Summary

Detail-oriented and results-driven Cloud & DevOps Engineer with 3 years of experience in automating infrastructure, optimizing CI/CD pipelines, and managing cloud deployments. Proficient in leveraging tools such as GitHub Actions, Jenkins, Kubernetes, Docker, Terraform, and AWS to streamline workflows, enhance system performance, and ensure high availability. Adept at implementing robust security practices, including automated vulnerability scanning, least-privilege access controls, and secure configuration management, to safeguard environments. Proven ability to collaborate cross-functionally to drive continuous improvement, reduce manual intervention, and align solutions with business objectives. Passionate about delivering efficient, secure, and scalable infrastructure solutions that support organizational growth and innovation.

## Technical Skills

- **Programming & Scripting Languages:** Python, Shell
- **Version Control & CI/CD:** Git, GitHub, ClearCase, Jenkins, GitHub Actions
- **Build Tools:** Maven, Gradle
- **Frameworks:** Robot Framework
- **Containerization & Orchestration:** Docker, Kubernetes
- **Configuration & Infrastructure as Code:** Ansible, Terraform
- **Monitoring & Observability:** Prometheus, Grafana, Splunk
- **Cloud Platforms:** AWS (EC2, IAM, VPC, S3, EKS), GCP
- **Development Environments:** VS Code, PyCharm
- **Methodologies & Project Management Tools:** Agile, Jira, Confluence
- **Operating Systems:** Windows, Linux

## Work Experience

### Project: 2 (Greenhouse Migration)

Dec 2024 - present

Role: DevOps Engineer

- Developed a GitHub Actions-based system testing workflows to automate testing across multiple repositories, ensuring code quality and reliability throughout the development process.
- Configured and managed Kubernetes (K8s) runners to execute common workflows, optimizing resource utilization and enabling scalable testing and deployment.
- Utilized JFrog Artifactory to store and manage Docker images, ensuring version control and centralized storage for efficient distribution of images and dependencies across the development pipeline.
- Integrated Splunk for centralized data management, aggregating logs and metrics from various services and repositories, providing real-time insights and facilitating proactive issue resolution.
- Integrated Google Cloud Spanner to ensure seamless, scalable, and highly available data storage and retrieval across cloud applications.
- Designed and implemented a Python-based tool to assist the testing team in minimizing keyword migration efforts for the Robot Framework, improving efficiency and reducing manual effort.

### Project: 1 (E-Commerce Application)

Aug 2022 – Nov 2024

Role: DevOps Engineer

- Designed and implemented a Git branching strategy to optimize version control workflows, enhance developer collaboration, and enforce secure coding practices through branch protection and code reviews.
- Integrated Git with Jenkins to establish end-to-end CI/CD pipelines, automating build, test, and deployment processes, reducing manual intervention by 40%. Implemented security checks, including vulnerability scanning and static code analysis, within the pipeline.
- Deployed and managed applications on Apache Tomcat servers for staging environments, ensuring robust testing and validation prior to production releases, and applying security patches to protect against known vulnerabilities.

- Automated cloud infrastructure provisioning using Terraform to deploy and configure EC2 instances on AWS, reducing setup time by 50% while implementing secure IAM roles and security group configurations for least-privilege access.
- Leveraged Ansible for configuration management, including the creation of custom Docker images and automation of system configuration tasks, ensuring consistency across environments and enforcing security best practices for user permissions and system hardening.
- Orchestrated containerized application deployment using Kubernetes, implementing auto-scaling, load balancing, and rolling updates to ensure high availability and optimal resource utilization, while securing the cluster by managing secrets and enforcing network policies.

## Education

---

Bachelor of Technology in Electronics and Communication Engineering  
Malla Reddy Engineering College - 7.9CGPA

June 2018 – May 2022

Board of Intermediate Education  
Rao's Junior College – 97.2%

June 2016 – April 2018

## Certifications & Trainings

---

- Associate Cloud Engineer – GCP
- AWS Cloud Practitioner Essentials - AWS
- Git and GitHub for DevOps Engineers - Udemy
- Jenkins- The Complete Tutorial | Master CICD and DevOps - Udemy.
