

Career Objective

To pursue a career as **Automation Tester/SDET (Software Development Engineer in Test)/Automation Engineer** with a company which gives opportunity to deliver high Quality Applications to Customers and offer opportunity to learn and develop professionally.

Professional Summary

- Having more than 6+ Years of experience in Automation and Functional Testing.
- Expertise in **Functional Testing, Automation Engineer, Mobile, Performance Testing, API Testing** and **API Automation Testing**, Quality Analyst, Functional Testing, Integration Testing, System Testing Regression Testing, Smoke Testing. Test Plan writing, Test Case writing, execution, bug reporting and bug follow up.
- 5 Year's experience in Automation using Selenium, HTTP Client, Rest Assured, Java, Cucumber, , Appium, Katalon Studio on different framework POM, BDD and Hybrid Framework
- Well versed in Automation Framework Designing, Test Scripting, Code Review and Java Development.
- Well versed with Data Structure, Design patterns and Java OOPs Concepts.
- Well versed in DEVOPS Tools –**Maven, Jenkins, GIT, TestNg, Jenkins, SVN Repository, SQL, JMeter, Rest Assured and Postman.**
- Hands on Experience on **CI/CD Tools, Bitbucket, SourceTree, Jira, HPQC, Bugzilla, and Maestro (Internal bug reporting tool).**
- Good knowledge of **Micro services Testing, Security Testing, Infrastructure Testing** and **Platform Testing.**
- Well versed in Wire Mock and Mock Management tools.
- Well versed with **DEVOPS** and **Agile Development** Methodology, Scrum and Process.
- Well versed with domains **Banking, Financial Trading, Investment, Insurance, Reinsurance, Defined Benefits, Health & Wealth, Banking, Telecom, E Commerce E Procurement, Hotel Management, and Education.**
- Delivered and proven record of delivering high quality and critical business Projects.

Technical Skills

Automation Tools	Selenium, Cypress, J Meter, HTTP Client, Rest Assured, Cucumber, Appium, Maven Jenkins, JUnit, Testng, Katalon Studio, Appium, Eclipse, IntelliJ Idea, Selenium Grid, and Unix
Frameworks	Page Object Model(POM), Hybrid Framework, Behavioral Driven Development (BDD), Test Driven Development(TDD), Spring, Hibernate, Microservices, Webservices Development, Web Scrapping
CI/CD Tools	Maven, Jenkins, Git, GitHub, Docker, Kubernetes, Jenkins and Circle CI
Databases	PL/SQL, SQL Server and Mysql

Programming Languages	Core Java, Python, Groovy, SQL HTML, XML, Gherkin and C Language
Tools Software Testing	Murex, Automation Testing, API Automation, Non UT Testing, Non Functional Testing, Mobile Automation, API Testing, Integration Testing, API Automation, Functional Testing, Regression Testing, Compatibility Testing, Thunderhead Testing, Website Testing, Personal Communication Statement(Notices) Testing, Verification and Validation
Domain	Trade Management System, Finance, Banking, Trading(Murex, Broadridge and Markit Tools), Insurance, Health and Wealth, Reinsurance, E Procurement and Inventory Management, E-Learning, Mobile Application, Health Care Website, Shopping Websites), Desktop Applications

A. Project Name: Taxi App- TaxiApp is the one of very common Application in Industry. In this application, there is two Applications, one for customer and another is for Driver. From Customer App, customer can book the taxi and from driver app driver can tract the location and deliver the services to user. Ride Cost is depends on distance and time. This Application is similar to Ola features. During this project, my responsibilities are below:

- Test Scenario analysis, update and feasibility analysis for Automation.
- Test Case Automation, Test Script Maintenance and Code Review.
- Framework designing and Maintenance
- Execution of Automation Test Script, Defect Reporting and Bug Tracking
- UI Automation of Regression Test Scenarios using Appium.
- Requirement Analysis, test planning and test case review and writing
- Regression, Integration test and Automation test script execution, Bug Reporting and Bug follow up.

B. Project Name: FairexGlobal Pay

Project Description: Fairex is just like an e-commerce site like Swiggy, there is two app one is for customer and other is for dispatcher. In Fairex global user can exchange different currency at a one place. Customer sells their currency and buys foreign current. From dispatcher app dispatcher tract, the location of customer and deliver the currency at their location.

Job Responsibilities:

- Feature File write and test automation scripting with Appium
- Framework design and Maintenance for new Automation Project
- Automation Test Script execution, analysis and bug reporting
- Automation Test Script execution, analysis and bug reporting
- Bug follow up and Root Cause Analysis

C. Birchstreet(BSS) is the unique platform which is the used by Hotels, Suppliers Buyers and Hospitality Industries to manage their inventory, sales, Pricing, Request for Quotation, Request for Proposal, Purchase Order, Invoices, Department Expenditure and user group and Approvals. It is web based portal and designed with complex Iframes, windows.

Job Responsibilities:

- End to End Automation of UI, Database and API Automation Testing using Selenium Framework.
- ROI, estimation and feasibility analysis of test cases for Automation.
- Write BDD feature file, Automation Script writing, maintenance and deployment on remote server for headless execution and schedule Jenkins Jobs.
- Automation Framework development, maintenance, resolve Automation challenges and mentoring QA team for Automation.
- Rewrite Katalon Framework Scripts into Selenium Scripts.
- Code Review, deploy on Remote Machine, and schedule Jenkins Job for nightly execution.
- Handling Continuous Integration and responsible for success.
- Collecting Automation Requirement from scrum Teams and delivering Automation Projects.

D. Project Name: Core Benefits Administrations (CBA) – CBA is administrative tool which used by USA health insurance providers and employers. CBA is integration of many applications Manager Self Service, Rapid Implementation, Notification Scheduler, Rate Calculator and Portal Development Manager (PDM) are integrated with CBA. Our team is responsible for Quality of CBA. We perform regression, API Testing, automate test scenario, develop tools for Operation team and reduce testing effort and increase more test scope using Automation.

Job Responsibilities

- Requirement Analysis, test case writing and execution
- Regression, Integration test and Automation test script execution, Bug Reporting and Bug follow up.
- Task Creation in sprint, estimation and assigning to team
- Regression Testing, Integration Testing, API Testing, JSON Testing, Template Testing

Education				
Examination	Passing Year	College	Univ./ Board	Percentage Marks
B.Tech	2014	IES Institute of Technology and Management, Bhopal	Rgpv	79.40%
Intermediate	2010	Baba Gorakhnath Bhimpura no.1 , Ballia ,U.P	U.P	76.2%
High school	2008	Hardev Intercollege, Ballia ,U.P	UP	71.6%

Trainings and Achievements

- Completed various trainings on Java, Cloud, Micro services, Security, Infrastructure as Services, Platform as Services, Data Structure, Selenium, Python and latest technologies from PluralSight, Udemy and Test Automation.

- Arctic Code Vault Contributor- Code achieved by Github Arctive Program.
- Open source community and tooling development enthusiast.
