B Tech (CSE) 2017 - 21
MAKAUT, West Bengal

PROFILE

Experienced Java Developer | 4+ Years in Software Development

Skilled Java developer with over 4+ years of experience in building scalable, high-performance web applications. Strong expertise in developing robust backend solutions using Java, Spring Boot, and microservices architecture, as well as building dynamic and responsive front-end interfaces with Angular. Proven track record in creating and maintaining solutions for complex domains such as car rental platforms, including features like property management, booking systems, authentication, reviews, and dynamic pricing.

TECHNICAL STACK

- **Core Java 8**
- Advanced Java
- HTML & CSS
- Spring Boot
- MySQL
- Payment Gateway
- JDBC
- Hibernate
- Spring Security
- JWT Token Authorization
- RestfulAPI
- Cloud Storage S3 bucket
- Microservices
- Postman
- Third Party API Integration
- Angular
- IntelliJ Idea
- Git & GitHub
- Debugging
- Mapping with JPQL
- Spring Validation
- Exception Handling
- **AWS Deployment for QA team**

WORK EXPERIENCE

CitiusTech Healthcare Technology Pvt. Ltd. , Bengaluru

Duration: Jul 2024 - Dec 2024

Claim Submission System

This project involved the development of a claim submission platform where providers submit claims for services rendered to members. It provides a clear, step-by-step guide to the claim submission process and highlights best practices for ensuring efficiency and accuracy.

Main Technologies:

Java, Spring Boot, Hibernate, MySQL, JWT, Swagger, Spring Security, Angular

Responsibilities:

- Reduced errors and claim rejections by improving the claim submission process.
- Enhanced satisfaction for providers, payers, and members by streamlining the user experience.
- Ensured timely and accurate payments by implementing robust backend services and efficient claim workflows.
- **Developed the front-end application using Angular, enabling a user-friendly interface for providers to submit claims easily and efficiently.**
- Debugging: Employed IntelliJ IDEA for debugging purposes, identifying and resolving defects to ensure the application's optimal performance.
- Utilized AngularTS for developing frontend applications. Developed basic components and integrated frontend functionalities with backend services.

InfoVision Inc, Bengaluru

Full Stack Developer

June '22 - July '24

Requirement Analysis: Analyzed requirement documents and Entity- Relationship(ER) diagrams to establish a robust foundation for the development process. **Entity Development:** Created entity classes derived from ER diagrams, ensuring precise mapping of database tables and their relationships. **MVC Implementation:** Implemented Model-View-Controller (MVC) architecture using Spring Boot, facilitating separation of concerns and enhancing maintainability. **Service/Repository Layers:** Designed and built service and repository layers, incorporating finder methods and JPQL queries with JOIN operations for efficient data retrieval. **Debugging:** Employed IntelliJ IDEA for debugging purposes, identifying and resolving defects to ensure the application's optimal performance. Utilized AngularTS for developing frontend applications. Developed basic components and integrated frontend functionalities with backend services.

BYJU's, Patna

Business Development Associate

Oct 21 - June 22

Client Relationship Management: Maintained strong client relationships and ensured customer satisfaction.

Market Research and Analysis: Conducted market research and analyzed trends to identify new opportunities.

Collaboration and Teamwork: Collaborated with marketing and sales teams, participated in training, and supported promotional events.

Kinfotech Pvt Ltd, Bengaluru

Java Trainee

Oct 20 - Sept 21

MyCityA2Z

E-commerce Platform

The project provides services such as shopping, education, hotels, market shopping, and other services.

Main Technologies:

Java, Spring Boot, Hibernate, Collection Framework, MySQL

Responsibilities:

- Developed back-end services using Java Spring Boot to manage user accounts, products, and related data.
- Fixed bugs and optimized performance using Spring tools.
- Integrated Hibernate for efficient database interactions and object-relational mapping.
- Integrated Twilio API to enable text message support on mobile and WhatsApp.
- Collaborated with front-end developers to ensure a seamless and user-friendly experience for customers.

TRAVELOCITY - INFOVISION Inc

Duration : 2 Years, 1 month

Travelocity is a travel booking platform based in USA that allows users to search for flights, hotels, rental cars, and vacation packages. It aggregates travel information from various sources, enabling users to compare prices and make reservations conveniently. The platform also provides tools for managing bookings and receiving travel alerts, getting updates on SMS and Email with pdf and packages module and car rental service

Property Module:

- **Property Management:** Implemented a module to manage property details, including images uploaded to AWS S3.
- **CRUD Operations:** Enabled Create, Read, Update, Delete operations to manage property information.

Booking Module:

- **Bookings:** Designed a module to handle property bookings, including availability checks.
- **Payment Integration:** Integrated payment gateways for secure transactions.

User Management Module:

- **Authentication & Authorization:** Developed user registration, authentication, and authorization with Spring Security.
- **Role-Based Access:** Implemented role-based access control to manage permissions.

Review and Rating Module:

- **Reviews & Ratings:** Allowed users to leave reviews and ratings for properties.
- **Integration:** Displayed reviews on property pages by linking with the property module.

Notification Module:

- **SMS Integration:** Implemented SMS for booking confirmations with a PDF link from S3.
- **Email Notifications:** Integrated email to send booking confirmations with PDFs.
- **Notification System:** Developed a system to inform users of important updates.

Car Rental Service Module:

- **Bookings:** Developed a car rental module for booking cars alongside properties.
- **Management & Pricing:** Integrated car availability checks and dynamic pricing.

Favorite Property Module:

- **Favorites Management:** Enabled users to save properties to a favorites list for future bookings.
- **Preferences Integration:** Linked to the user management module to persist preferences.

Packages Module:

- **Bundled Deals:** Offered bundled property and car rental deals.
- **Pricing & CRUD Operations:** Implemented dynamic pricing and CRUD operations for package management.

AWS & Azure:

- **AWS:** Used AWS S3 for property images and booking PDFs, enhancing scalability and security.
- **Azure:** Leveraged Azure DevOps for CI/CD, automating workflows for efficient development.

Angular:

- **Frontend Development:** Developed basic components and integrated them with backend services using Angular and TypeScript, ensuring maintainable code.
-
