SUMMARY

A data science professional actively working as Team Lead in a Data Engineering project with knowledge of data architecture for pipeline orchestration at cloud platform. I use my skills in **Python, SQL and AWS** cloud to deliver data engineering requirements.

KEY SKILLS

- Python scripting • SQL querying • Cloud integration • Data Modelling
- Querying Big Data • Organizational ability . Statistical Analysis

TECHNICAL STACK

Tools/Languages: Python, SQL, Cloud Integration

API: Flask, FastAPI

Big Data Tool: Apache Hadoop, Spark - PySpark

AWS Tools: S3, Lambda, Glue, Athena, CloudWatch, DMS, Appflow, SNS, SQS, CloudFormation, Step Functions, Sagemaker

Database: Snowflake, AWS Redshift, MySQL **NoSQL Database:** AWS DynamoDB

Containers: Docker

PROFESSIONAL EXPERIENCE

Data Engineer

Cognizant Technologies [Dec '21 - Present]

Pune, IN

Cox Automotive Inc.

Lead Data Engineer

1. Leading a team of data engineers to serve the day-to-day business data for business intelligence and decision making.
2. Writing and testing python scripts and lambda codes to build **data extraction pipelines** from various sources before making them available in data lake and databases.
3. Constructing Glue - **PySpark** scripts for data transformation pipelines, and SQL **stored procedures** and queries to create user specific views in Snowflake database.
4. Building workflows of **data ingestion pipelines** by integrating different AWS cloud services, for their scheduled orchestration.
5. Building data flow from **Snowflake** database to **Salesforce** Object via AWS using **Appflow**.
6. Migrating data assets from **AWS to Snowflake**. Creating views and materialized views in Snowflake.
7. Designing & Developing AWS Cloud Based Systems **using Cloud Formation**
8. Creating and updating **architectural documentation** for new process or change in existing set-up.
9. Monitoring and **resolving any defect or failures** of data ingestion pipelines in production environment by finding the root cause and implementing reliable solutions to avoid reoccurrence of same error.
10. Interacting with Product owners, end-users and IT stakeholders to understand requirements related to **data sourcing, transforming, processing** and loading at centralized database.
11. Conducting continuous improvement planning meetings to identify pain areas and possible scopes of improvement and cost optimization and innovating any existing process, with team of data engineers to **reduce cloud cost and simplification of architecture**.

ML Engineer

1. Building a Part **Recommendation System** to suggest parts for the requirement mentioned in purchase order.

2. **Collaborating** with IT and SCM team of Caterpillar to understand the part ordering flow and various bottlenecks within the existing process.
3. **Ideation of business problem** and implementation of Data Science tools and approach to find the solution.
4. Preparing the User Story and **Design Document for stage wise development** and execution.
5. **Data wrangling, modelling, feature engineering, analysis, visualizing and evaluation** of model performance and deployment in various environments.
6. Create optimized **python scripts based on Pandas, NumPy, SciKit Learn libraries, infrastructure management templates** for model deployment.

Assistant Manager - Engineering

Siegwerk India Pvt Ltd [Aug '12 - Dec '21]

Rajasthan, IN

- Defining business/technical problems, developing data science solution models by following actions:
 1. Collaborating with concerned engineers for conceptualizing the projects, models and required data.
 2. Declaring measurables and variables for the models.
 3. Installation of field instruments to gather and capture the raw data.
 4. Data Collection, Extract, Transform & Load using PowerBI.
 5. Data wrangling , modelling, analysis and visualizing.
 6. MIS, Power and R&M expense analysis.
 7. MIS dashboard creation and reporting for KPIs and 5-why analysis.
 8. Forecasting of Power and Repair & Maintenance budget.

KEY PROJECTS

Domain: Manufacturing | Tech Stack: Python - Pandas - Regression - NLP

- Objective: Build and deployed a part **Recommendation System** to suggest relevant replaceable parts in a Purchase Order
- Solution: Development of an **NLP and Regression based** recommendation system using **AWS SageMaker** platform for development & deployment.
- Key Achievement: Successfully developed the recommendation system.

Domain: Engineering | Tech Stack: Python - Pandas

- Objective: Create a predictive model to estimate the upcoming load on Utility infrastructure
- Solution: Designed a **Heat Map** to visualize the correlation matrix of load on machine versus production.
- Key Achievement: Prepared a predicted repair & maintenance budget for upcoming five years.

Domain: Manufacturing | Tech Stack: Python - Pandas - scikit-learn

- Objective: To develop a prediction model for the quality of product in batch manufacturing environment.
- Solution: Designed a **Logistic Regression model** to predict if a product will pass or fail in quality check
- Key Achievement: Developed a model with **Specificity score of 82%**.

Domain: Web & Social Media Analytics | Tech Stack: Python - Pandas - scikit-learn

- Objective: To build a classification model to identify a review on social media as Positive or Negative
- Solution: Created a classification model based on Naive Bayes theorem.
- Key Achievement: A Naive Bayes model was created with **accuracy** of 84%.

Domain: Sentiment Analysis | Tech Stack: Python - spaCy

- Objective: Analyze the reviews by the customers of a restaurant to suggest which food item to kept or removed from the menu.
- Solution: **Tokenizing**, pattern matching using **PhraseMatcher**, calculating average scores of reviews mentioning menu items.
- Key Achievement: Successfully identified Best rated and Worst rated menu items.

EDUCATION

Post Graduate Diploma in Data Science

IIIT Bangalore [Mar '20 - Apr '21]

Bengaluru, IN

- **Course Modules:**

- Python | Data Analysis using Pandas | Data Analysis using MySQL | Inferential Statistics | Hypothesis formulation
- Time Series Analysis | Intro to ML| Linear Regression | Logistic Regression | Clustering | SVM | Lexical Processing
- ETL using PowerBI | Dashboard creation using Tableau | Data-storytelling using Plotly
- Secured **CGPA 3.6/4.0**

Bachelor of Technology in Mechanical Engineering

Uttar Pradesh Technical University, Lucknow [Aug '08 - Jun '12]

Uttar Pradesh, IN

- Secured 68%

CERTIFICATIONS

- **AWS Certified Cloud Practitioner** - AWS
- **Advanced SQL using Big Query interface**
- **MongoDB Aggregation Pipeline** - MongoDB University
- **Deep Neural Network** - Udemy
- **Knowledge Graph** - Neo4j

Participations

- **AWS Healthcare Hackathon** - Runner-up - Optimum medicine inventory tool
- **Cox Ideathon** - RoboDash - "takes you where data lives."
