SUMMARY

Experienced Deep Learning Engineer skilled in Golang, Python, TensorFlow, and C++, with expertise in Machine learning, Deep learning, and computer vision. Proven track record in developing and deploying advanced AI models, including object detection and classification systems. Hands-on experience on Nvidia Deepstream SDK, Hailo8 AI accelerator for edge AI applications on Raspberry Pi 5 and real-time AI applications. Strong problem-solving skills and a commitment to delivering high-quality, scalable solutions. Passionate about driving innovation in AI technologies and contributing to impactful projects

Experience

Vaan Infra

Aug/2024-Present

R&D Engineer

- Currently developing a People Counting project using Raspberry Pi 5.
- Worked with the Hailo8 AI accelerator for edge AI applications on Raspberry Pi 5.
- Developed SVDS using DeepStream Python to calculate vehicle speed using a camera.
- Experienced in optimizing AI models for real-time inference on embedded devices.
- Passionate about edge AI, real-time analytics, and deploying efficient deep learning models.

Synergylabs Technology Pvt Ltd

Jan/2023–Aug/2024

Deep Learning Engineer

- Worked on VIDS (Vehicle Incidence Detection System): Developed and deployed VIDS using Nvidia DeepStream SDK and DeepStream Docker to detect vehicle-related incidents efficiently.
- Optimized AI Inference for Real-Time Processing: Integrated DeepStream to enhance video analytics, ensuring high-speed and accurate vehicle detection in traffic surveillance.
- Worked on Automatic Traffic Counting & Classification: designed an AI-powered system to classify and count vehicles, aiding in traffic management and data analysis.
- Deployed AI Solutions on Client Servers: Implemented scalable AI models on client infrastructure, optimizing system performance for large-scale video processing applications.

Synergylabs Technology Pvt Ltd

Jan/2023–Aug/2024

Deep Learning Engineer (Intern)

- Developed Deep Learning Models: Designed and implemented AI models for real-world applications.
- Deployed AI Solutions on Client Servers: Successfully integrated and deployed deep learning models for seamless operation.
- Designed YOLO-Based Object Detection: Developed a YOLO model for accurate vehicle detection and classification.
- Worked on Automatic Traffic Counting & Classification: Built an AI-powered system to analyze and categorize traffic data efficiently.
- Ensured High Model Accuracy & Performance: Optimized models for real-time inference, improving recognition speed and accuracy.

Emtech Foundation

Aug /2020–Sep /2020 & Feb/2021 – Aug/2021

Embedded Software Engineer

- Completed an 8-month internship as an Embedded Software Engineer.
- Performed hardware testing of microcontroller-based systems.
- Programmed microcontrollers like PIC16F887 and 8051.
- Assisted the design team in ongoing embedded system projects.
- Contributed to the development and optimization of embedded solutions.

Academic Project

- **OBSTACLE AVOIDER ROBOT** (based on embedded C using PIC microcontroller): Obstacle avoidance robotics is used for detecting obstacles and avoiding collisions. The design of an obstacle avoidance robot requires the integration of many sensors according to their task.
 - **GESTURE-CONTROLLED ROBOT HAVING A ROBOTIC ARM**: A gesture-controlled robot is a kind of robot that hand gestures can control. The user just needs to wear a small transmitting device on his hand which includes a sensor, which is an accelerometer in our case. The movement of the hand in a specific direction will transmit a command to the robot, which will then move in a specific direction
 - **IPL-Machine Learning Model**: Data Analysis and created a model that predicts the probability of the winning IPL by giving some basic information.
 - **Text Summar**: Model summaries of the given paragraph.
 - **Movie Recommender**: The model suggests some movies according to the content-based.
 - **Delinquency:Telecom-Model-Algo.ai**: A model that can predict the probability of each loan transaction. whether the customer will be paying back the loaned amount within 5 days of the insurance of the loan (Labels '1' & '0').
 - **TITANIC EDA**: Data analysis on the Titanic dataset.
-

Education

Post-Graduation (2021-2022)

Specialization: PG Diploma in Data Science and Analytics University

University: J.C. Bose University of Science and Technology, YMCA Faridabad, Haryana

Graduation (2017-2021)

Specialization: Btech in Electronics and Communication Engineering

University: J.C. Bose University of Science and Technology, YMCA Faridabad, Haryana

Higher Secondary School (2016-2017)

School: Kendriya Vidyalaya, NTPC Badarpur, Mathura Road, New Delhi, 110044
12th grade-70%

Techinal Skills:

- | | | |
|--------------------|------------------------|----------------------------|
| • Python | • C++ | • Embedded C |
| • Machine Learning | • SQL | • Computer Vision (OpenCV) |
| • Deep Learning | • Statistical Analysis | • Golang |
| • TensorFlow | • OOPS | • DeepStream |
-

Certification:

- Introduction to Deep Learning & Neural Networks with Keras
- Machine Learning with Python
- A-Z Artificial Intelligence with Python
- NPTEL (Python using Data Structure)
- Embedded C
