Employment Recital

BCITS Private Ltd - Bengaluru	Senior Software Engineer	May 2018	March 2024
NSOFT India Services Pvt Ltd- Bengaluru	Software Engineer	March 2014	May 2018

Academic

- Bachelor of Engineering (Electrical and Electronics) from Adichunchanagiri Institute of Technology affiliated to prestigious Visvesvaraya technological University (VTU)- Aug 2019 to June 2012

Technologies:	Java	Operating System:	Windows, Linux
Network:	TCP/IP.	RDBMS:	Oracle, MS SQL,Navicat
Servers:	Tomcat		
Tools: Selenium, Bugzilla,Jmeter,Postman			

Projects Handled

PROJECT 1: JVVNL, BESCOM

Role: Team Member

Description: Security testing of entire suite of applications which are key to the success of STC's day to day operations. The application suite consists of custom developed apps, implementation of packages like CRMs etc., web services, Databases. The applications and infra were used based end customer to top management of STC.

Tools Used:
Burp Suite,SQL,Linux,Manual testing

Responsibilities:

- Involved in kick off, execution, reporting.
- Gathered the functional requirements of the application.
- Devise the security test strategy, test cases.
- Execution of Tests and Reporting Defects Using Bugzilla

BESCOM Total Revenue Management (Web Application)

Description: BESCOM project mainly deals with Configuration of New Connection, Metering, Billing, File creation, File upload and Approvals modules.This application facilitates in generating bills W.R.T the energy consumption and also enables to generate acknowledgement post bill amount collection is done.

Roles and Responsibilities

- Analyzing requirements.
 - Designed Test cases
 - Execution of Tests and Reporting Defects Using Bugzilla.
- Involved in Regression Testing.
- Involved in Manual testing,SQL and Linux

- Involved in Manual Functional testing of all the core features and Involved in GUI, Regression and User Acceptance testing ,Performance testing,
- Reporting the bugs to the development team via Bugzilla & following up for fixes and retesting the fixed RC Builds.
- Execution of Tests and Reporting Defects Using WMS
- Involved in Regression Testing.
- Generation and execution of test cases.
- Involved in GUI and Integration testing.
- Prepare and Execute test cases prepared for testing Software builds on Daily basis.

Client: Bangalore Electricity Supply Company (BESCOM)

Environment : Android 10 as front end and SQLite as a back end

Duration: March 2016 till May 2018

Tools used: SQL Server 2008

Methodology used: V Model

PROJECT 2: BijliPrabandh(Mobile app)

Description: JVVNL application has been developed in both web and mobile application, which mainly deals with the generation of new bills w.r.t the power consumption, and providing receipts against the bill payment. Billing and payment collection details will be sent to server immediately through GPRS and Customer bill will be generated through Bluetooth printer device.

Description: JVVNL application has been developed in both web and mobile application, which mainly deals with the generation of new bills w.r.t the power consumption, and providing receipts against the bill payment. Billing and payment collection details will be sent to server immediately through GPRS and Customer bill will be generated through Bluetooth printer device.

Roles and Responsibilities

- Analyzing requirements.
- Designed Test cases
- Execution of Tests and Reporting Defects Using Bugzilla.
- Involved in solving Environmental problems along with Technical Support People, Especially in server connections and database issues..
- Involved in Regression Testing.
- Involved in Manual testing,SQL and Linux

PROJECT 3: MDM

Automatic meter reading, or AMR, is the technology of automatically collecting consumption, diagnostic, and status data from water meter or energy metering devices (gas, electric) and transferring that data to a central database for billing, troubleshooting, and analyzing. This technology mainly saves utility providers the expense of periodic trips to each physical location to read a meter. Another advantage is that billing can be based on near real-time consumption rather than on estimates based on past or predicted consumption. This timely information coupled with analysis can help both utility providers and customers better control the use and production of electric energy, gas usage, or water consumption.

AMR technologies include handheld, mobile and network technologies based on telephony platforms (wired and wireless), radio frequency (RF), or power line transmission.

Responsibilities:

- Involved in kick off, execution, reporting.
- Gathered the functional requirements of the application.
- Devise the security test strategy, test cases.
- Execution of Tests and Reporting Defects Using Bugzilla

Client : Jaipur vidyuth vitaran nigam limited (JVVNL)

Environment : SQL server 2015, Android 10, SQLite as back

End Duration : June 2018 till march 2024

Tools used : SQL Server 2015, Android Virtual Device Manager.

- Involved in Manual Functional testing of all the core features and Involved in GUI, Regression and User Acceptance testing ,Performance testing,
- Reporting the bugs to the development team via Bugzilla & following up for fixes and retesting the fixed RC Builds.
- Execution of Tests and Reporting Defects Using WMS
- Involved in Regression Testing.
- Generation and execution of test cases.
- Involved in GUI and Integration testing.
- Prepare and Execute test cases prepared for testing Software builds on Daily basis.

Client :JVVNL,APDCL,PGVCL,Noida water MDM

Duration: June 2018 to March 2024

Tools used: Navicat 15

Methodology used: Agile methodology
