OBJECTIVE

To obtain a challenging position as a Software Test Engineer, where I can utilize my technical skills and experience to ensure the delivery of high-quality software products.

EDUCATION

Bachelor of Computer Science and Engineering, Sri Eshwar College of Engineering(Anna University)	2015- 2019
HSC, Sri Renuga Devi Higher Secondary school	2014 - 2015
SSLC, CGM Higher Secondary school	2012 - 2013

SKILLS

- Software Testing in Manual : Functional, Regression, Smoke, Sanity, Integration, Retest,
- API Testing Tools: Postman and Swagger
- Web/ Mobile Application Testing
- Working Experience in SQL(Structured Query Language) Queries and MySQL DB
- Working experience in Defect/Bug Life Cycle on Jira
- Working experience in Linux and Windows Environment
- Working experience in Agile Methodologies
- Working experience in JSON, XPath, REST API and Selenium Webdriver, Robot Framework.
- Root Cause Analysis through data and application logs using SSH commands.
- Experience in testing APIs using Postman.
- Experience in AWS Athena and SQLyog, Grafana/Redash
- Document Test results and report defects and Update RTM with test data for Quality Assurance.
- Experience in Python Scripting using Jupyter Notebook.

EXPERIENCE

Software Test Engineer Redbus India Pvt Ltd	May 2021 - till <i>Bangalore, India</i>
· IT professional with 3.6 years of hands-on experience in Redbus India Pvt Ltd as Software Test Engineer. · Ability to do software manual testing such as smoke ,regression, user Acceptance testing, sanity testing on various API and web applications. · Develop and creating the test cases based on requirements and user stories. · Utilized SQL queries to validate data integrity and perform database data validation testing. · Employed JIRA for test planning, bug tracking, and monitoring as per the sprint protocols. · Understanding on bash Linux command to debug and identify the application issue using logs and track defects. · Analyze the requirements and user stories along with the development team and identify test scenarios. · knowledge in Python to leveraging automated the repeated tasks and testing using frameworks such as Robot Framework and Selenium with Python. · Working on Python Scripts to handle production issue and data analysis works. · Good knowledge in creating and maintaining test data for automation testing, ensuring data integrity and accuracy throughout the testing process. · Write and Maintain the python data manipulation scripts in Jupyter Notebook and executing it. · Evaluated and classified the severity and priority of bugs, ensuring that critical issues were addressed promptly. · Working knowledge on EKS dashboard to checking the application server logs to debug the production issues. · Mobile testing with debugging skills, particularly in using Android Chunker and iOS Flick features for effective issue identification and resolution.	

PROJECTS

1. Project Title : MY BUS ON RedBus

Company : Redbus India Pvt Ltd

Role : Software Test Engineer.

Project Description:

"redBus On My Bus" enterprise web application is mainly invented to bring global bus operators to redBus Bus Booking Platform, using this application bus operators start business with redBus and which has multiple level Validation and Verification to make secure business.

Responsibility:

- Collaborated with the development and product teams to understand business and technical requirements, and designed comprehensive test plans and test cases for the "redBus On My Bus" platform.
- Defined testing strategies for functional, integration, regression, and system testing.
- Conducted manual testing of core features of the website to ensure that bus operators can successfully integrate with the redBus platform.
- Developed and maintained automation test scripts using Robot Framework to streamline test execution for repetitive tasks and reduce manual testing efforts.
- Identified, documented, and tracked defects using JIRA, ensuring timely resolution and providing detailed reports for quick fixes.
- Assisted in UAT by coordinating with business stakeholders to verify that the platform met their requirements and expectations.

2. Project Title : Common Accounting and Invoicing platform

Company : Redbus India Pvt Ltd

Role : Software Test Engineer.

Project Description:

This platform functions as a centralized system for overseeing accounting, invoicing, and payment procedures, enhancing operational efficiency, and ensuring financial accuracy and compliance within the travel or transportation sector.

Responsibility:

- Collaborated with cross-functional teams to understand system requirements, developed detailed test plans and test cases to validate accounting, invoicing, and payment functionalities.
- Conducted testing of multiple micro services within the platform, validating their individual functionalities, and ensuring their seamless communication and integration with other services.
- Used testing tools such as Postman and Swagger to test and validate the RESTful APIs of micro services related to accounting, invoicing, and payments.
- Developed and executed data validation scripts in Python to ensure the integrity and consistency of financial data across all accounting, invoicing, and payment systems.
- Wrote Python scripts to automate data reconciliation between micro services, ensuring that transactions were accurately reflected in the system and financial reports.
- Utilized Python libraries such as Pandas, and SQLAlchemy to automate and validate data processing, including verifying the correctness of calculations, payment amounts, invoices, and financial reports.
- Identified, documented, and tracked defects using JIRA, coordinating with development teams to ensure timely resolution.
- Provided technical support to the business and operations teams, assisting with troubleshooting system-related issues, especially in the invoicing, payment, and accounting modules.
- Collaborated with developers to quickly identify root causes and deploy fixes in a timely manner, reducing downtime and ensuring uninterrupted system functionality.
