Summary

- With **9 years** of dedicated experience in Software Development, I possess a strong expertise in Java/J2EE and Client-side programming languages. Currently, I am working as a technical lead at Wipro, where I effectively manage and lead a team of 11 members.
- My core responsibilities at Wipro include Product Development, Implementation, vulnerability fixes and Training, where I excel in utilizing my skills in Core Java, J2EE, Spring (MVC), Spring Boot, Microservices, and Angular. Moreover, I have a solid working experience with a range of web technologies such as HTML5, JavaScript, React, CSS3, Bootstrap, Python, AngularJS, and Angular.
- One of my key strengths is my ability to adapt and learn quickly, enabling me to effectively apply new technologies at work. I have hands-on experience in unit testing using Junit, WDIO, Jest, and rspec. Furthermore, I have successfully implemented Continuous Deployment processes and provided valuable insights on best practices.
- In addition to my expertise in software development, I have practical knowledge of AWS, including EC2, S3, Auto Scaling, Load balancing, and security groups. I am also familiar with Docker and have a thorough understanding of Agile and Waterfall working models.
- I bring to the table hands-on experience with data visualization tools like Tableau, which allows me to deliver insights effectively. Having spent over 3 years in the Banking and Finance domain, I have gained a deep understanding of the industry's specific requirements and challenges.
- Over the course of my career, I have gained extensive experience in various domains, showcasing my versatility and adaptability as a software professional. I have successfully contributed to projects in the travel domain, sales domain, manufacturing domain, healthcare domain, and banking domain.
- My areas of interest lie in Core software development using Data structures and Algorithms, Full Stack Development, Client-Server Programming, Cutting Edge Technologies, Design of Algorithms, and System Designing. These interests drive my passion for continuous learning and innovative problem-solving in the software development landscape.

Technical Skills

Languages and Technologies	:	JAVA, J2EE (Servlets and JSP), Ruby and Rails
Java Framework	:	Spring (MVC), Spring Boot
Microservices	:	Design, Development, Deployment
Web Technology	:	JavaScript, Python, AJAX, JSON, HTML5, CSS3, Bootstrap
Application Servers	:	JBoss, Apache tomcat
Databases	:	MySQL
Cloud Infrastructure	:	Amazon AWS
IDE	:	Eclipse, STS and JBOSS Studio
CI/CD Tool	:	Jenkins
Test Management Tool	:	Jira
Testing framework	:	Junit, Wdio, Jest and rspec.
Code Repositories	:	Subversion (SVN), GIT, and Concurrent Versions System (CVS)
JavaScript Frameworks	:	AngularJS 1(1.6.4), Angular 8, jQuery (3.2.1) and React

Web Text Editor	:	CKEditor
Data Visualization Framework	:	Highcharts
Mobile framework	:	jQuery Mobile, Apache Cordova (PhoneGap)
Tools	:	Crucible

Graduate Degree: Bachelor of Technology (B. TECH) from JNTUA University (2010-2014).

Professional Summary

Designation: Technical Lead, **Wipro, India**

July 2022 – Current

Project Description: As a Technical Lead, I have been actively involved in enhancing web and desktop applications for hospitals in the USA, with a focus on continuous improvement efforts. My contributions include implementing new features, optimizing existing functionalities, and refining the user experience to meet evolving needs in the healthcare domain. Utilizing feature toggle techniques has allowed for controlled activation or deactivation of specific application features, contributing to the success of the applications in the healthcare industry.

Business Domain: Healthcare

Duration: Currently Working

Responsibilities Handled:

Team Management: Providing leadership and guidance to a team of 11 members, ensuring efficient project execution and effective team collaboration.

Individual Contributorship: Demonstrated exceptional ability to work independently, taking ownership of projects and delivering high-quality results as an individual contributor. Executed tasks with self-reliance, contributing to the team's success through proactive problem-solving and personal initiative in a collaborative environment.

Full Stack Development: Handling both server-side and client-side development, ensuring seamless integration and functionality across components.

Client Coordination: Engaging with clients to understand their needs, documenting comprehensive project requirements, and meeting their expectations.

Quality Assurance: Actively participating in writing test cases and conducting thorough testing to maintain application quality and reliability.

Continuous Deployment: Utilizing Jenkins to build and deploy applications, streamlining development processes for efficient delivery.

Frontend Development: Actively contributing to the development efforts by writing React code, creating robust and user-friendly interfaces.

Security and Vulnerability: Taking responsibility for fixing vulnerability issues, implementing security patches and updates to ensure application stability and security.

Technologies and Tools: Core Java, Spring Boot, Microservices, Hibernate, React, Angular, Ruby and Rails, JUnit, Jest, WDIO, rspec, Jenkins, Git, Crucible, and MySQL.

As a Technical Lead in the "Revenue Maintenance Cycle" project, my diverse roles encompass team management, full-stack development, client coordination, quality assurance, continuous deployment, frontend development, and ensuring application security and stability.

Responsibilities Handled:

JUnit Testing:

- Designing and writing comprehensive JUnit test cases to validate the functionality and performance of the application modules.
- Conducting unit tests to ensure the accuracy and robustness of individual components and methods.
- Performing integration testing to verify seamless interactions between different modules.

Individual Contributorship:

- In the role of an individual contributor, I independently managed and executed tasks, showcasing a strong sense of ownership, and delivering high-quality results.

Team Handling:

- Leading and managing a team of developers, providing guidance and support to ensure the successful execution of project tasks.
- Assigning responsibilities and tasks to team members based on their skills and expertise.
- Conducting regular team meetings to discuss progress, challenges, and goals.
- Mentoring junior team members, assisting in their professional growth and skill development.
- Collaborating with other teams, such as QA and UI/UX, to ensure smooth coordination and timely delivery.

Server-side and Client-side Development:

- Developing server-side functionalities using Core Java, Spring Boot, and Hibernate to manage data and business logic.
- Implementing client-side features using Angular and Bootstrap 3.x to create responsive and user-friendly interfaces.
- Ensuring the seamless integration of both server-side and client-side components.

Microservices Expertise:

- Played a key role in designing and implementing database structures for microservices, optimizing data access and storage for individual services.

Client Coordination:

- Interacting with the client to gather requirements, understand their needs, and provide updates on project progress.
- Documenting client specifications and feedback to incorporate changes into the application.

Testing and Deployment:

- Participating in User Acceptance Testing (UAT) to ensure the application meets client expectations.
- Conducting System Integration Testing (SIT) to verify the smooth integration of various modules.
- Assisting in the deployment process to release new features and updates to production environments.

Database Management:

- Working with MySQL to handle database design, implementation, and maintenance.
- Ensuring data integrity, security, and optimal performance.

Responsibilities Handled:

Design and Development: Designed and developed the AngularJS service layer and implemented Ajax calls to facilitate smooth data retrieval and interactions between the frontend and backend components.

Client Interaction: Engaged in direct communication with clients through calls and meetings to gain a deep understanding of their requirements, ensuring the application aligns with their specific needs.

Web Services Integration: Worked extensively on web services, seamlessly integrating and consuming data provided by different vendors, enriching the application's functionalities with up-to-date information.

3rd Party API Coordination: Coordinated with 3rd party API services, effectively incorporating external functionalities to enhance the application's features and provide a richer user experience.

Business Logic Analysis and Design: Conducted thorough analysis and design of business logic, ensuring that the application's functionalities are well-structured and align with business requirements.

Responsive Application Development: Developed an application with a responsive view, allowing users to access and interact with the application seamlessly across various devices and screen sizes.

Unit Testing: Conducting unit tests to ensure the accuracy and reliability of isolated code units, verifying that they perform as expected in various scenarios.

Test Coverage Analysis: Analyzing test coverage to ensure that critical parts of the codebase are thoroughly tested, identifying areas that require additional test cases. Test Coverage Analysis: Analyzing test coverage to ensure that critical parts of the codebase are thoroughly tested, identifying areas that require additional test cases.

Regression Testing: Conducting regression tests to ensure that code changes or updates do not introduce new issues or negatively impact existing functionalities.

Designation: Software Developer, **Silverlake Information System, India**

Feb 2015 – May 2017

Responsibilities Handled:

Client Coordination: Coordinated with the client to thoroughly understand their requirements and documented all project specifications and expectations.

Project Analysis: Conducted in-depth project analysis, including case studies, to gain valuable insights and ensure a clear understanding of the project's scope and objectives.

Coding and Development: Took ownership of the coding part throughout the entire project, implementing functionalities and features to meet project requirements.

JUnit Testing: Designed and executed comprehensive JUnit test cases to validate the functionality and behavior of individual units or components within the software application, ensuring accuracy and reliability.

Mobile Development: Engaged in mobile development tasks, leveraging relevant technologies and frameworks to build and optimize mobile applications for optimal performance and user experience.

Dashboard Design and Development: Led the design and development of the Dashboard component, utilizing Highcharts to present data effectively and intuitively.
