Summary :

Meticulous web developer with 6 years of development experience. I am working with JS, React JS, Node JS HTML, and CSS to deliver exceptional customer experiences I am passionate about responsive website design and a firm believer in the mobile-first approach.

Experience :

- 18 December 2023 - Till Now | **DTDC Express Limited.**
- 02 December 2022 - 30 November 2023 | **Redcliffelabs Pvt Ltd.**
- 12 Feb 2018 – 03 November 2022 | **Learn and Lead Talent Solution Pvt Ltd.**

Skills :

Cloud	AWS
CI/CD	Jenkins
Version Control	GitHub, BitBucket, Gitlab
Container	Docker
Programming Languages	HTML5, CSS3, JavaScript, NodeJS, ExpressJS, jQuery, Python, TypeScript, PHP
OS	LINUX Ubuntu, Mac
Framework	ReactJS, NextJS, Redux, Bootstrap, Django, Tailwind CSS
Database	MySQL, PostgreSQL

Projects :

Tracking Modernization: 18 December 2023 - Till Now ([DTDC Express Limited](#))

Contributed to the development and maintenance of technology systems powering India's largest express logistics network, built the end-to-end frontend [Tracking Project](#) called the backbone of [DTDC Express Limited](#)

Project Description:

Developed a robust [Tracking](#) system using React, integrating API data to display real-time location updates and milestones. Designed dynamic components to conditionally render information based on delivery status, weights, and service codes. Implemented efficient pagination, search validation, and responsive UI, focusing on performance optimization and scalability. They ensured a seamless user experience through effective state management, error handling, and code refactoring.

Technologies used: ReactJs, JavaScript, Redux, NodeJS, JavaApi, Mongoddb ,HTML, CSS.

Roles and Responsibilities:

- Led the design and implementation of responsive and user-friendly interfaces for a tracking application using React/Next.js, ensuring a seamless and intuitive experience across all devices.
- Architected and maintained reusable, scalable components using React/Next.js, effectively leveraging hooks and state management libraries (Redux/Context API) for efficient handling of complex application states.
- Drove the integration of RESTful APIs to display real-time tracking data, ensuring robust and efficient data flow through asynchronous request handling and state synchronization.
- Optimized application performance by implementing lazy loading, code splitting, and efficient state management, leading to faster load times and a superior user experience.
- Established and executed robust testing strategies using Jest and React Testing Library, ensuring the reliability and stability of application components.
- Designed GIT management and code deployment strategy.
- Improved site speed by optimizing images, reducing HTTP requests, and compressing CSS/HTML files
- Collaborated with backend developers and product managers to continuously refine and enhance application features, aligning with business goals and user feedback .

Redcliffe Labs: 02 December 2022 - 30 November 2023

Redcliffe Labs is India's fastest-growing diagnostics and precision medicine company focusing on reproductive health testing, rare diseases, and cancer Genetic Diagnostics.

Achievements/Task :

Currently, I am working on Redcliffe's main consuming website (<https://redcliffelabs.com/>) through which you can book any health package or test for any individual easily.

- Earlier, Redcliffe Lab's website was based on **ReactJS** as we were facing issues related to SEO and organic traffic on the website, So we moved our website from **ReactJS** to

NextJS during this transition of website, I learned a lot of new concepts of NextJS such as pre-rendering methods - **static generation and server-side rendering, Image Optimization, Fast Refresh, file-system-based routing**, etc.

- At Redcliffe, I worked on a **Laboratory Information Management System (LIMS)** software that allows us to effectively manage samples and associated data. Using LIMS, our lab can automate workflows, integrate instruments, and manage samples and related information.

Learn and Lead Talent Solution Pvt Ltd: 12 Feb 2018 – 03 November 2022

E-commerce :

Technologies used: ReactJs, JavaScript, NodeJS, Python, Django, PostgreSQL, HTML, CSS.

Roles and Responsibilities:

- Was responsible, for getting the project layout as per current business requirements.
- I was responsible for deploying the same on a private cloud-based server out of Linux (Cent OS).
- Remediate bugs and issues found during testing
- Troubleshoot technical issues and identify
- Designed GIT management and code deployment strategy.
- Improved site speed by optimizing images, reducing HTTP requests, and compressing CSS/HTML files
- Tested websites for functionality and compatibility across different browsers and devices.

1. AWS (Lambda, S3, RDS)

- a. Created EC2 Instances (Linux / Windows)
- b. Worked on custom AMIs for ASG and Launch Templates
- c. Created the whole network using VPC from scratch
- d. Used ALB, NLB, and CLB as per the requirements for load balancing
- e. Worked with S3 to take dumps, logs, and common files for serving
- f. Created a hosted zone and added DNS entries for our web servers, mail servers, db servers
- g. Provided specific permissions to new users using IAM
- h. Worked on server-less DBs through RDS

2. Web App - React and Django Based Projects

- a. Developed APIs using Django Rest API.
- b. Used PostgreSQL as backend DB for this project.
- c. Developed a frontend UI that fetched APIs through the Django API server.

3. Eval Pro - ReactJs and PHP-Based Project

- a. **Eval Pro** It is an editor provided for all the languages. Functionality or backend is created with PHP.
- b. Frontend is created with ReactJS and CSS. In this item, users can write a program and get the actual result with compilation.
- c. Terminal In this PHP is used to for functionality like executing the commands of the DOS/LINUX
- d. The terminal and the front end are created with the terminal.js plugin with ReactJS and CSS.
- e. Align Match This is completely created with ReactJS and CSS. In this item user can next/previous the items and match them accordingly.
- f. Slider This is completely created with ReactJS and CSS. In this min/max/current value should be set for the slider, the user needs to calculate the correct answer and set the slider to the correct value.

1. OS simulators - Javascript/JQuery/PHP Based project

- a. Windows 7 To provide users with GUI-based tasks of Windows 7 like installing any software in Windows, we created this Php for the backend and JS/JQUERY and CSS are used for the front end.
- b. Windows8 To provide users with GUI-based tasks of windows8 like changing/setting any configuration of Windows, we created this PHP for the backend and JS/JQUERY and CSS are used for frontend.

PROFESSIONAL QUALIFICATION:

- B.Tech (EE) from A.K.T.U in 2017
- 12th from U.P Board in 2013
- 10th from U.P Board in 2011

PERSONAL DETAILS:

Date of Birth: 9th July 1996
Languages Known: English & Hindi
Hobbies: Visit Adventure places, Internet Surfing, Reading about Technology.
Marital Status: Single
Nationality: Indian
