Phone Number : 9741596297

Professional Summary

Experienced Automation Engineer with a strong background in automated testing and development using Playwright and Python. Skilled in creating robust and efficient test scripts, integrating automated testing frameworks, and enhancing the overall software development lifecycle. Adept at problem-solving and optimizing workflows to ensure high-quality software delivery.

Technical Skills

- **Programming Languages:** Python, TypeScript, Bash, Shell scripting
- **Automation Tools:** Playwright, selenium
- **Frameworks:** PyTest, Robot Framework, Django
- **Software:** Git, Jenkins, Docker, Kubernetes,aws,
- **Application :** Automation testing using Python(Pycharm IDE, Pytest framework)
- **Databases:** MySQL, MongoDB
- Experience in **Linux command**
- **Other Skills:** CI/CD, Cloud Services (AWS, Azure), REST APIs, Agile Methodologies
- **Patterns:** Robot Framework, Cucumber, Selenium, Page Object
- **REST API testing:** SoapUI, Postman

Professional Experience

Automation Engineer *Anunta Technology, Bengaluru*
[08, 2021] – [12,2024]

- Developed and maintained automated test scripts using Playwright and Python, improving test coverage by 30%.
- Integrated Playwright-based test automation with CI/CD pipelines using Jenkins, enabling continuous testing and faster release cycles.
- Created custom Python libraries to extend Playwright functionalities, enhancing test automation capabilities.

- Collaborated with development teams to identify and resolve software defects, ensuring high-quality product releases.
- Conducted training sessions for team members on Playwright and automated testing best practices.

Project : Swiggy customer call handling process

Automate the customer call handling process, QA evaluation, feedback mechanism, and coaching process to ensure streamlined workflows, accountability, and performance tracking in Swiggy's customer service team.

Framework Setup

Use **Playwright** for browser automation.

Set up a **Python project** with the following libraries:

- pytest for test execution and reporting.
- playwright for browser automation.
- pytest-html for detailed test reports.

Software Test Engineer *IBM, Bengaluru,*
[02, 2019] – [08, 2021]

- Implemented automated testing solutions using selenium tool and PyTest, reducing manual testing efforts by 40%.
- Designed and executed end-to-end test scenarios for web applications, ensuring comprehensive validation of features and functionalities.
- Developed and maintained test plans, test cases, and test data for automated testing projects.
- Analyzed test results, generated detailed reports, and communicated findings to stakeholders.
- Participated in Agile ceremonies, providing insights on test progress and potential risks
- Knowledge of Middleware products such as Apache Tomcat, WebSphere, IBM MQ

PROJECT: HD MAPS

The goal is to perform a testing on maps and navigation system of new upcoming automated self-drivable car, where car can automatically drive itself with the help of pre-installed map which is developed by us

Responsibilities:

- Understand the requirements of the given module
- Involved in preparation of Test cases and Test Data
- Involved in manual testing and reporting bugs in Jira
- Created test scripts using PYTHON, Pytest, selenium and functional and regression test.
- Used advanced XPath and CSS selectors techniques to identify web elements, proficient in using Selectors Hub
- Created test Cases in Zephyr - JIRA plug-in, testing and entering issues in JIRA.
- Conducted Data Driven and Cross browser testing
- Involved in Smoke, Sanity, Functional and Regression Testing

Client : Mercedes Benz[Oct 2016– April 2018]

Company :TeamLease (bengaluru, India)

TeamLease Services is one of India's leading human resource companies offering a range of solutions to employers for their hiring, productivity and scale challenges.

Role: Support Engineer

PROJECT: NTG6

Gesturerecognitions

Description:

We are testing and working in a Coral tool which is a base tool for gesture technology. We are using this technology to control car interior assets. Gesture recognition technology is with a goal of interrupting human gesture via mathematical algorithm. It focuses in the field Include motion recognition from hand gesture. Users (Driver or Passenger) can use simplegesture to control or interact with device (Central media display) without physically touching them.

Responsibilities:

- involved in testing the tools which are developed internally in the organization
- working on the tools to annotate gesture recognition of hands in the video we recorded
- reporting the bugs in the tool
- involved in daily standup meetings, retrospective meetings

Environment & Tools: JIRA, Confluence

Education

MCA *Kristu Jayanti college, Bengaluru,*
[2012] – [2015]

Certifications

- Certified Software Test Automation Specialist
 - Python Institute Certified Associate in Python Programming (PCAP)
 - Playwright Automation Certification
-

Projects

E-commerce Platform Automated Testing

- Led the development of an automated testing framework using Playwright and Python for an e-commerce platform, resulting in a 50% reduction in regression testing time and a significant improvement in test accuracy.

CI/CD Pipeline Enhancement

- Enhanced an existing CI/CD pipeline by integrating Playwright-based test automation, enabling automated testing at every stage of the development lifecycle and reducing deployment failures by 20%.
-

Professional Affiliations

- Member, Association for Software Testing (AST)
 - Member, Python Software Foundation (PSF)
-

Additional Information

- Strong analytical and problem-solving skills.
- Excellent communication and team collaboration abilities.
- Willing to travel and relocate for project assignments.
