## PROFESSIONAL SUMMARY

ValidationNumber: 7RJM3502ZGTF5430

IT Professional with **9.3+Years** of experience and working in **Tech Mahindra** as **Build and Release Engineer** and **DevOps Engineer**, Skilled in software configuration management which includes Project Setup, Build & Release process setup, Build Automation, Continuous Integration, **AWS** and **DevOps**.

- Integrated Source Control Mechanism (cleanup, checkout, update, commit, tagging) with build systems using **SVN** and **GIT**.
- Creating and maintaining the source code repositories using **SVN, GIT, GITHUB or GITLAB**.
- Having proficient knowledge in **GIT** version control system.
- Performed the tasks of **Branching, Tagging & Merging** the source code between multiple branches.
- Request handling Apache HTTPD server that handles incoming HTTP requests from clients.
- Reverse Proxy forwarding requests to backend servers or microservices, which is useful for load balancing and routing.
- serving static content like HTML, CSS, and JavaScript files.
- Enforcing secure connections and performing access control through authentication and authorization modules.
- Using Apache HTTPD that allows it to communicate with Apache Tomcat (or other servlet containers) using the AJP (Apache JServ Protocol).
- Load balancing across multiple Tomcat instances, distributing requests based on different algorithms (e.g., round-robin).
- Using mod cluster module for Apache HTTPD that provides more advanced load balancing capabilities compared to mod jk. It can dynamically discover and load balance requests among Tomcat servers or other application servers.
- Manage clusters of Tomcat servers, providing automatic failover and rebalancing of requests in case of server failures.
- Servlet and JSP Execution
- Handling the Micro services architecture and serve as an container for Java based microservices
- Experience in writing and maintaining Build management tools like **ANT/Maven and C-MAKE**.

- Maintain and monitor daily builds and providing proactive support for ongoing release by setting up new environment or resolve any build issues.
- Extensive experience as a DevOps Engineer, CICD Expert.
- Managed docker orchestration and docker containerization using kubernetes.
- Well Versed Knowledge on Linux(UBUNTU/RHEL).
- Good Knowledge on SHELL scripting and Python scripting.
- Implemented Hibernate ORM to map Java objects to relational database tables, streamlining data persistence and reducing boilerplate SQL code by 30%.
- Optimized database interactions through advanced Hibernate features such as caching and lazy loading, resulting in a 20% improvement in application performance.
- Leveraged the Spring Framework to build a scalable and maintainable enterprise application, utilizing dependency injection and AOP to enhance code modularity and testability.
- Developed service layers with Spring's transaction management, ensuring consistent and reliable database operations across multiple transactional resources.
- Designed and implemented a Spring MVC architecture for a high-traffic web application, separating concerns into models, views, and controllers to improve code organization and maintainability.
- Enhanced user input handling and data binding by integrating Spring MVC's validation and form handling features, leading to a 15% reduction in form submission errors.
- Improved debugging and issue resolution times by implementing effective logging practices with Log4j, resulting in a 25% decrease in mean time to resolution (MTTR) for production issues.
- Developed end-to-end solutions using the Spring Framework and Hibernate, including both front-end and back-end components, ensuring seamless integration and efficient data handling.
- Enhanced application performance by tuning Hibernate queries and optimizing Spring transaction management, leading to a 40% reduction in response times and increased system scalability.
- Implemented comprehensive logging strategies using Log4j, including custom loggers and log rotation policies, which enhanced application monitoring and provided critical insights into system health and user activity.
- Good working knowledge on Continuous Integration tools Jenkins/Hudson. Configuring multiple Jenkins jobs for build and deployments and setting up distributed build using Jenkins master/slave concepts, plug-in installation and pipeline project using groovy script.
- Expertise in setup and configure Tomcat and Apache, Deployment of web applications in Tomcat.

- Worked on configuration management tool like Chef.
- Knowledge on build developing environment tool Vagrant.
- Experience in using the monitoring tool Nagios.
- **Collaborated** with cross-functional teams to **integrate** Spring MVC controllers with Hibernate-based data access layers, resulting in a **highly responsive** and **robust** web application.
- Worked on installing of Docker using Docker toolbox. Creating Docker images using a Docker file, Docker container snapshots and removing images.
- **Configured** Log4j to manage application logging across multiple modules, providing **detailed insights** into application behavior and performance through customized logging levels and appenders.
- **Designed** and **implemented** a Spring MVC architecture for a high-traffic web application, **separating** concerns into models, views, and controllers to **improve** code organization and maintainability.
- Having Knowledge on Amazon IAM,VPC,EC2,S3,Route 53,Database.
- Proficient in communicating effectively with good project management skills.
- Expertise on Amazon Web Services (AWS)-EC2, VPC, S3, AMI, SNS, Cloud Watch, EBS, Elastic Load Balancer, Auto Scaling, IAM-Role, VPC, Subnet, EFS, Route 53.
- **Developed** service layers with Spring's transaction management, ensuring **consistent and reliable** database operations across multiple transactional resources.
- **Implemented** comprehensive logging strategies using Log4j, including custom loggers and log rotation policies, which **enhanced** application monitoring and provided **critical insights** into system health and user activity.
- **Designed** and **implemented** Ansible playbooks to automate the deployment of server infrastructure, reducing manual setup time by **50%** and **ensuring** consistency across development, staging, and production environments.
- **Developed** comprehensive Ansible roles and tasks for managing server configurations, including software installation, service management, and security settings, which **increased** deployment efficiency and **reduced** configuration drift
- **Integrated** Ansible with CI/CD pipelines to automate application deployments and updates, resulting in **faster release cycles** and **higher deployment reliability** with **90% fewer manual errors**.
- **Ensured** consistent environment provisioning by creating reusable Ansible playbooks and roles, which **eliminated** environment-related issues and **accelerated** onboarding for new team members.
- **Implemented** Ansible for managing multi-tier application architectures, including web servers, application servers, and databases, which **streamlined** complex deployments and **improved** overall system stability.
- Backup/Restore, taking a snapshot of existing volumes and create AMI from running servers .

## EDUCATIONAL CREDENTIALS

---

**Bachelor of Engineering in Electronics and Communication (ECE) from JNTUH Hyd-2015**

## PROFESSIONAL WORK EXPERIENCE

---

**Organization** : Tech Mahindra

**Duration** : Dec 2021 to Till

**Designation** : DevOps Engineer

**Title** : Banking Project

**Client** : Capital One - US

**Role** : Senior SRE DevOps AWS Engineer

**Environment** : Maven, Jenkins, GIT, GITLAB, Gerrit, Shell Scripting, Python, JIRA, AWS, Artifactory, Java, Gradle, Maven, Spinnaker, Github Action, K8's, Docker, Cloudwatch, Terraform, Ansible, Datadog, Grafana, s3, IAM, Jfrog, Nexus, Trivy Scan, NPM, Sonarqube, Deployments, Splunk, EC2, VPC, VPC PEERING, NAT GATEWAYS, VPC ENDPOINTS, EBS, S3, EFS, AUTOSCALING, ELB, IAM, ROUTE 53, CLOUDFRONT, SQS, LAMBDA, RDS, EVENT BRIDGE.

**Description:** Implemented Continuous Integration using Jenkins.

Worked with various scripting languages like Shell Scripting and Java. Coordinate with the Offshore and Onshore teams for Production Releases.

### Roles and Responsibilities:

- Working under tier-1 team and resolving JIRA tickets.
- Giving read/write permissions for user in JFROG and Artifactory lab.
- Deleting the old artifacts versions in Jfrog as per the requirement.
- Giving admin access to users and configuration to renovate on GITHUB.
- Giving +2 Review in Gerrit and doing cherry-pick and creating new patch set.
- Adding commit add for dependency and checking change id in Gerrit.
- Giving code review +1 or +2 and merge the code with repo and working on Gerrithub dashboard.
- Checking Jenkins job issues and trouble shoot with the error.
- Integrated delivery (CI and CD process) Using Jenkins.

- Experience in configuring and managing the spinnaker CI/CD pipelines.

- Helping customer for onboarding the Spinnaker pipelines and providing them required attributes.
- Spinnaker usage with Gitops style and cloud accounts management overt
- Writing Gradle Script and Using for run build for Java Projects.
- Worked on Ansible setup, managing hosts file, Using YAML , authoring various playbooks and custom modules with Ansible.
- Created inventory in Ansible for automating the continuous deployment and wrote playbooks using YAML scripting.

- Configuring the Docker containers and creating Docker files for different environments.

- Creating Advance Jenkins Pipeline with Jenkins Pipeline Scripted Syntax to Trigger Other Remote Jobs on Other Jenkins Masters.
- Use of Docker to manage micro services for development of continuous
- Configure and monitoring the nightly auto deploy builds in Jenkins for the DEV and QA teams.
- Build and deployment scripts according to SCM team standards and processes to QA,Performance and Production Environments.
- Integrate delivery (CI and CD process) Using Jenkins.
- Working with dev teams during Git merge issues.
- Coordinating with DEV teams during compile time issues while building code for generating artifacts to release.
- Liaising with different teams during deployment activities in different work Environments.
- Developing best practices for improving DevOps practices in a team and improving security from the infrastructure side.

- Define and deploy monitoring, metrics, and logging systems on AWS Cloudwatch, Prometheus for enhanced infrastructure monitoring and Grafana for visualization and Loki for Log aggregation.

- Experience with container-based deployments using Docker, Kubernetes using AWS EKS with Helm charts, working with Docker images, Docker registry on cloud.

- Cost estimation to transfer workload to cloud.
- Familiar with WAF implementation for application security from bots and DDOS attacks.
- Implement systems that are highly available, scalable, and self-healing on the cloud platform.
- Implement and automate security controls, governance processes, and compliance validation.
- Preparing documents in Confluence pages like any critical type of issues

- Configuring SSL on the web servers
- Domain and web server management.
- Scripting and automation
- **Monitoring via Cloud Watch, Prometheus and Grafana**
- Deployed various support services such as Sonarqube, Postgres, MongoDB, ELK, Redis, kafka in EKS cluster for cost optimization.
- Creating development branches and communicating with different domains about the development of respective US Walmart Stores.
- Change /Modify scripts upon request by the user using Java programming and Unix Shell scripting knowledge.
- **Launching Amazon EC2 Cloud Instances using Amazon Web Services (Linux) and Configuring launched instances with respect to specific applications.**
- Expertise on Amazon Web Services (**AWS**)-EC2, VPC, S3, AMI, SNS, Cloud Watch, EBS, Elastic Load Balancer, Auto Scaling, IAM-Role, VPC, Subnet, EFS, Route 53.
  - Bootstrap EC2 instances through **Chef**.
  - Write chef recipes for automating manual task.
  - Branching, Tagging, Release Activities on Version Control Tools: **GIT**
  - Managing **Docker containers** for different Environment. (DEV,STAGE, PROD etc.)
- **Configuring and managing complete CI/CD pipeline. Managing Jenkins pipeline configuration and deployment to Kubernetes cluster.**
  - Monitoring the Infrastructure and Optimizing the pipeline from time to time.
  - Have created AWS repository for all the modules and configured branch policy for code quality.
  - Creating **artifacts (jar, war & tar)** from source code.
  - Worked on Automated build & Release process.
  - Taking care of branching strategies and branch migrations.
- Involved in the release process and deployed applications (WAR, EAR and JAR) to the **Tomcat Application Server/Web logic**.
  - Provide support to Production, UAT, Development environments
  - Identify root cause, and resolve problems.
  - Managed all the bugs and changes into a production environment using the **Jira tracking tool**.
  - Experience in Continuous Integration, Installation and Configuration.
  - Handling and monitoring all phases of Build activities using **CI tools viz., Jenkins**.
- Configuration Management: Maintenance of source code Repository using GIT, Branching, Tagging and Merging.

- Creating development branches and communicating with different domains about the development of respective US Walmart Stores.
- Change /Modify scripts upon request by the user using Java programming and Unix Shell scripting knowledge.
- Launching **Amazon EC2 Cloud** Instances using Amazon Web Services (Linux) and Configuring launched instances with respect to specific applications.
- Expertise on Amazon Web Services (**AWS**)-**EC2, VPC, S3, AMI, SNS, Cloud Watch, EBS, Elastic Load Balancer, Auto Scaling, IAM-Role, VPC, Subnet, EFS, Route 53.**
  - Bootstrap EC2 instances through **Chef**.
  - Write chef recipes for automating manual task.
  - Branching, Tagging, Release Activities on Version Control Tools: **GIT**
  - Managing **Docker containers** for different Environment. (DEV,STAGE, PROD etc.)
- Configuring and managing complete **CI/CD pipeline**. Managing Jenkins pipeline configuration and deployment to **Kubernetes cluster**.
  - Monitoring the Infrastructure and Optimizing the pipeline from time to time.
  - Have created AWS repository for all the modules and configured branch policy for code quality.
  - Creating **artifacts (jar, war & tar)** from source code.
  - Worked on Automated build & Release process.
  - Taking care of branching strategies and branch migrations.
- Involved in the release process and deployed applications (WAR, EAR and JAR) to the **Tomcat Application Server/Web logic**.
  - Provide support to Production, UAT, Development environments
  - Identify root cause, and resolve problems.
  - Managed all the bugs and changes into a production environment using the **Jira tracking tool**.
  - Experience in Continuous Integration, Installation and Configuration.
  - Handling and monitoring all phases of Build activities using **CI tools viz., Jenkins**.
- Configuration Management: Maintenance of source code Repository using **GIT**, Branching, Tagging and Merging.

**Organization** : Value Labs  
**Duration** : Jan 2017 to Nov 2021  
**Designation** : DevOps Engineer  
**Title** : Hospitalization Project  
**Client** : HCUP  
**Period** : Jan 2017 to Nov 2021  
**Role** : DevOps Engineer Grade-2  
**Environment** : C-Make, Jenkins, GIT, GITLAB, Gerrit, Shell Scripting, Python, JIRA, AWS, Artifactory.

Terraform, Kubernetes, Docker, Maven, Gradle, Cloudwatch, Cloud Formation, Grafana, Github Actions, CI/CD, Troubleshooting, Shell Scripting, Gradle, Maven, Github Actions.

### **Description:**

The Walmart Store contains six modules to cover the full functionality. It covers General Master, General Ledger, Accounts Payable, Accounts Receivable, Cash and Tax the General ledger and General Masters and other modules are done in special pattern. These modules are interconnected for data flow. It offered Securities Banked Margin Finance, Structured Finance, Business Finance, Commercial and Residential Real Estate to the clients. Billing the items and Scanning the QR Code Application.

### **Roles and Responsibilities:**

- Creating Golden AMIs for AWS deployments (using Packer and terraform)
- Configured Jenkins job with Maven build tool and accomplished continuous deployment by integrating Ansible and Jenkins using Jenkins plugins.
- Configured Jenkins nodes to build jobs in the view of distributing the load of Jenkins server and achieved parallel builds.
- Experience in the usage of data center automation and configuration management tools such as Ansible, Docker, etc. Container orchestration using Kubernetes. Installing and designing Kubernetes clusters, running jobs and deploying pods.
- Installing and configuring Jenkins. Building, distributing and parameterizing the builds.
- Written the Ansible YAML scripts to configure the remote servers Implemented CI/CD pipeline for application deployment using tools like Git, MVN, Jenkins, Docker.
- Managing and maintaining Kubernetes infrastructure and Architecture
- Responsible for creating customized multistage builds for reducing image size
- Configuration and support of Kubernetes Container Platform Strong knowledge in automation of Kubernetes activities using CI/CD pipelines, templates and scripting.
- Using Gradle for build tool for Jenkins
- Worked on Nagios Monitoring tool. Knowledge on Thanos Monitoring tool.
- Scrum-master: Managing the team to implement various tasks, managing tickets on Azure-DevOps and Jira.

- User management and IAM Roles
- Review PR on GitHub Provide valuable feedback to developers, facilitating knowledge sharing and fostering a culture of continuous improvement.
- Implementation of Keycloak as SSO on services
- Reporting to client for the tasks and plans
- Designing of Highly available and scalable infrastructure that ensure high availability and reliability by creating disaster recovery plans.
- Providing architecture solutions and migrating applications from old architecture to new architecture.
- Solution to centralized Multiple Environments using terragrunt and terraform
- Implementing WAF, Security Hub and Guarduty for security.
- Conducted regular security audits, vulnerability assessments and implemented security best practices
- Implementing CI/CD pipeline through Jenkins and ArgoCD
- Writing Gradle script and run jobs.
- Implementing Infrastructure monitoring using Elastic search, logstash, kibana, Prometheus, Loki and Grafana with custom dashboards for visualization.
- Implementing Alerting with Alert manager and notify on channels such as slack and teams
- Implemented micro service architecture for application components using Docker, and orchestrated them efficiently with Kubernetes, ensuring high availability and scalability.
- Developed automation scripts in Python and Bash to streamline operational tasks, saving X hours per week
- Designed and tested disaster recovery plans, ensuring business continuity in case of failures.
- Maintained clear and up-to-date documentation for infrastructure, processes, and configurations.
- Developed and maintained PHP web applications using Opencart, CodeIgniter and Laravel frameworks for various projects such as e-commerce, inventory management portals, Astrology platform, Education Industry, Automobile online store etc.
- Worked on Rest APIs.
- Designed and developed various reusable modules for the web applications.
- Bug fixes and troubleshooting of the critical issues.
- Designed and implemented database schemas, optimized SQL queries, and ensure data integrity
- Review PR on GitHub and mentored junior developers.
- Dockerized applications and implemented ci with jenkins.

- Taking care of branching strategies and branch migrations.
- A much collaboration with different developers/domains during the cycle of valid phase to Quality Production phase of every model.
- Taking care of integration activities like SW Version, IMEI SV and FOTA developments.
- Taking care of creating initial setup for different suffixes/buyers based on line-up.
- Adopting google security patches based on model processor's (chipset) to the development/release branch and interacting with domains.
- Adopting of Google Mobile Services (GMS) packages based on mobile model requirement.
- Test, build, design, deployment, and ability to maintain continuous integration and continuous delivery process using tools like Jenkins, Git, etc.
- Building tools and processes around CI/CD involving integrations with Jenkins.
- Implementing DevOps process in organization (EC2, Git, Github actions, Jenkins)
- Managed over 20 tickets per day.
- Coordinate with Development teams to ensure timely delivery of features and improvements into multiple environments.
- Engage with development teams to document and implement best practices for our existing and new projects.
- User management and IAM Roles
- Review PR on GitHub Provide valuable feedback to developers, facilitating knowledge sharing and fostering a culture of continuous improvement.
- Implementation of Keycloak as SSO on services
- Reporting to client for the tasks and plans
- Designing of Highly available and scalable infrastructure that ensure high availability and reliability by creating disaster recovery plans.

- Developing best practices for improving DevOps practices in a team.
- Doing branch migrations and while communicating with domains if any conflict occurs.
- Taking care of list languages of different regions based on requirements.
- Taking care of all kind of releases like Valid phase releases, Quality Phase releases (Mass production release), Marketing Releases (MR) and Secure Marketing releases.
- Making daily and nightly builds during Valid Phase to Quality Phase releases.
- Get in touch respective domains if any conflict occurs during the build and helping them in resolving conflict.
- Extensive experience as a DevOps Engineer, CICD Expert.
- Managed Docker orchestration and Docker containerization using Kubernetes.
- Hands-on experience in GIT and GitHub.
- Hands-on experience in Jenkins (CI) and Automation of Build, Test & Deployment process, across java projects using Jenkins. Hands-on experience in Ansible (Configuration Management). Infrastructure automation by writing/Deploying Ansible YAML playbooks
- Creating clusters using Kubernetes and worked on creating many pods, replication controllers, Replicasets, services, deployment, labels, health checks and ingress by writing YAML file.Used kubernetes to orchestrate the deployment, scaling and management of docker containers.Experience in kubernetes to deploy scale, load balance and manage docker containers with multiple name spaced versions.
- Proficient with container systems like docker and container orchestration like EC2 container service, kubernetes, worked with terraform.
- Worked on Docker to create Custom Docker Containers & Custom Docker Image.
- Monitoring the deployments in all the servers using monitoring tool CloudWatch.
- Backup/Restore, taking a snapshot of existing volumes and create AMI from running servers and restore it in case of emergency.
- Having good hands on experience in Linux.
- Good exposure of agile development methodology.
- Work closely with developers, Testers and Managers to resolve the issues that are reported during the deployments to different environments.

- Managing all phases of build and release activities, dependency management and deployment strategy.
- Develop an automated, continuous, build process that reviews the source code, identifies build errors and notifies appropriate parties to expedite/facilitate synchronization to the latest build
- Writing Ant build scripts for automating project builds.
- Setup and configuring Plans in continuous integration tools Jenkins for project builds.
- Automate & monitor daily project development builds by using build tool Jenkins
- Configuring the "crontab" for nightly build and deployment
- Performing the tasks of Branching, Tagging & Merging the code between branches.
- Responsible for managing source code repository Subversion, creating Tags, Branches and Branch Merges.
- Coordinated releases with development and testing teams to ensure systems are ready for code to be deployed.
- Configuring environment script files and deploying the code to environments (DEV, QA, UAT, and PROD). Tracking artifacts, Build and deployment information.
- Understanding the Build Process and scripts. Coordinating with the developers to deploy the snapshots to Test / QA environment.
- Work with Developers on the build issues (Build Failures).
- Created multiple Jenkins jobs and configured distributed builds. Managed Jenkins E2E.
- Responsible for labeling and building the code to be deployed.
- Coordinating with team to schedule a Release with development and testing teams to ensure systems are ready for code to be deployed.
- Experience with container-based deployments using Docker, Kubernetes using AWS EKS with Helm charts, working with Docker images, Docker registry on cloud.
- Cost estimation to transfer workload to cloud.
- Familiar with WAF implementation for application security from bots and DDOS attacks.
- Implement systems that are highly available, scalable, and self-healing on the cloud platform.
- Implement and automate security controls, governance processes, and compliance validation.
- Preparing documents in Confluence pages like any critical type of issues.
- Monitoring the deployments in all the servers using monitoring tool Cloud Watch.
- Backup/Restore, taking a snapshot of existing volumes and create AMI from running servers and restore it in case of emergency.
- Having good hands on experience in Linux.
- Good exposure of agile development methodology.

## TECHNICAL STRENGTHS:

|                          |                                                                                                                                                               |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Cloud Technologies       | AWS (EC2,IAM,VPC,S3,Route 53,Database,Cloud Watch, EKS, DataDog, Load Balacer, Cloudformation, Dynamo DB, Gateways, EBS, Lamda, Security Group, Event Bridge) |
| Operating Systems        | Unix/Linux , Windows , MAC-OS                                                                                                                                 |
| Scripting Languages      | Shell, Ruby, Yaml, Python                                                                                                                                     |
| Configuration Management | Chef, Ansible                                                                                                                                                 |
| CI/CD Tools              | Jenkins, Hudson, Spinnaker, Github Actions                                                                                                                    |
| Version Control          | SVN, GIT, GitHub or Gitlab                                                                                                                                    |
| Build & Scheduling tools | ANT, Maven, Gradle, C-Make, Pipeline Script,                                                                                                                  |
| Application Server       | Tomcat, JBOSS                                                                                                                                                 |
| Monitoring Tools         | Nagios, Grafana, Prometheus, Dynatrace, CloudWatch                                                                                                            |
| Dependency Tool          | NPM                                                                                                                                                           |
| Security Scan            | Trivy File Scan, OWASP, Aqua tsec                                                                                                                             |
| Code Quality Check       | Sonarque, Gerrit, CodePeer                                                                                                                                    |
| Bug Tracking Tools       | Jira Tool, Service Now                                                                                                                                        |
| IAC Code                 | Terraform                                                                                                                                                     |
| Pack Manger              | Helm, Helm Chart                                                                                                                                              |
| Artifactory              | Jfrog , Nexus, Artilab, Artyfactory-edge                                                                                                                      |
| containerization Tool    | Docker, Docker swarm, Kubernetes and EKS cluster.                                                                                                             |

I hereby declare that the details furnished above are best of my knowledge and belief.
