PROFESSIONAL SUMMARY

AWS DevOps Engineer with 5+ years of experience in cloud computing, automation, and DevOps practices. Expertise in AWS cloud services, CI/CD pipelines, infrastructure as code, containerization, and monitoring tools. Strong hands-on experience in implementing scalable and secure cloud infrastructure and integrating DevOps tools in Linux environments.

- ❖ 5 years of experience in DevOps, SRE, and AWS Cloud Engineering focusing on automation, CI/CD, monitoring, and cloud infrastructure to ensure scalability and reliability.
- ❖ Designed and modified CI/CD pipelines using Jenkins, automating stages with Groovy scripting, improving deployment speed by 40%.
- ❖ Designed and deployed cloud infrastructure using Terraform, CloudFormation, and Ansible, enabling consistent and automated provisioning.
- ❖ Implemented DevSecOps practices by integrating SonarQube, OWASP Dependency-Check, and Trivy into CI/CD pipelines, improving code quality and reducing security vulnerabilities.
- ❖ Adopted the Shift-Left approach by integrating early testing and security scans in CI/CD pipelines. Implemented an efficient Git branching strategy to enhance collaboration, maintain code stability, and ensure smooth deployments across environments.
- ❖ Hands-on experience with Docker and Kubernetes (EKS), ensuring zero-downtime rollouts, high availability, and auto-scaling of microservices.
- ❖ Designed and implemented event-driven architectures using AWS SNS, SQS, S3, API gateway and lambda, enabling real-time processing and automation.
- ❖ Configured Prometheus, Grafana, ELK, CloudWatch, Datadog, and Nagios for real-time monitoring, proactive alerting, and achieving 99.9% system uptime.
- ❖ Automated cloud cost optimization using Lambda scripts, EBS snapshot automation, and non-business-hour resource shutdowns, achieving 30% cost savings.
- ❖ Expertise in AWS services like EC2, S3, RDS, IAM, VPC, Lambda, API Gateway, DynamoDB, CloudFront, and Route 53, implementing serverless web hosting and auto-scaling.
- ❖ Having good hands-on experiencing in cloud migration using AWS MGN service for on-premises to cloud infrastructure.
- ❖ Designed and implemented highly available and scalable AWS infrastructure using EC2, VPC, IAM, RDS, S3, Auto Scaling, ELB, and Route 53, ensuring secure and resilient cloud environments.
- ❖ Conducted Proof of Concept (PoC) evaluations for new technologies, ensuring feasibility, scalability, and seamless integration into existing workflows.
- ❖ Root cause analysis (RCA), troubleshooting, and high-priority incident resolution, ensuring high availability, business continuity, and disaster recovery readiness.

PROFESSIONAL EXPERIENCE

- ❖ Working as a Senior DevOps Engineer for INFOSYS Ltd, Hyderabad. Since Nov 2019 TO till date.

EDUCATIONAL QUALIFICATION

- ❖ Bachelor of Technology from Jawaharlal Nehru Technological University, Kakinada in 2018.

TECHNICAL SKILLS

Version Control	Git
Build Tools	Maven
CI/CD Tools	Jenkins
Code Quality Check	SonarQube
Security Tools	OWASP Dependency-Check, Trivy
Containerization & Orchestration	Docker, Kubernetes
Scripting Languages	Shell, YAML, Groovy, Python
Infrastructure as Code (IaC)	Terraform, CloudFormation
Configuration Management	Ansible
Web Servers	Apache2, Tomcat, Nginx
Monitoring & Logging	Grafana, Prometheus, DataDog, Nagios, ELK
Operating Systems	Linux, Windows
Repositories	GitHub, Nexus, Docker Hub
Cloud Platforms	AWS, Azure

Project #2

Client: PowerSchool

Duration: Jan 2022 - Present

Designation: Senior DevOps Engineer / SRE

Responsibilities:

- ❖ Designed and implemented end-to-end CI/CD pipelines using Jenkins, integrating stages like build, test, security scans, artifact packaging, and deployment for faster, reliable, zero-downtime releases.
- ❖ Managed Git branching strategies and enforced code review best practices to maintain high-quality releases.
- ❖ Integrated SonarQube, OWASP Dependency-Check, and Trivy into CI/CD pipelines for static code analysis, vulnerability scanning, and security compliance.
- ❖ Automated infrastructure provisioning using Terraform and CloudFormation, ensuring scalability, consistency, and cost optimization in AWS environments.
- ❖ Built and managed containerized applications using Docker and Kubernetes (EKS), enabling high availability, scalability, and efficient zero-downtime deployments.
- ❖ Developed and deployed microservices-based architectures using Kubernetes, Docker, and AWS, ensuring seamless scalability and fault tolerance.
- ❖ Implemented a Build Once, Run Anywhere strategy with Docker and Kubernetes, ensuring consistent deployments across multiple environments.
- ❖ Set up Prometheus, and Grafana for real-time monitoring using exporters, improving system observability, and performance tracking.
- ❖ Configured ELK Stack for centralized logging, enabling efficient log analysis, troubleshooting, and proactive issue resolution.

Project #1

Client: PowerSchool

Duration: Jan 2020 - Oct 2021

Designation: AWS DevOps Engineer

Responsibilities:

- ❖ Built and managed AWS cloud infrastructure using Terraform and CloudFormation, enabling automated provisioning, scaling, and infrastructure consistency
- ❖ Designed and implemented serverless web hosting using AWS services such as Route 53, Lambda, API Gateway, S3, SNS, SQS, CloudFront, and DynamoDB, ensuring cost-effective and highly available solutions.
- ❖ Architected and implemented event-driven architectures using SNS, SQS, Lambda, and DynamoDB Streams, enabling real-time data processing and automation.
- ❖ Led Lift & Shift migrations from on-prem to AWS cloud, optimizing cloud architecture with auto-scaling, load balancing, and serverless components, ensuring high availability and performance.
- ❖ Configured and monitored AWS services such as CloudWatch, CloudTrail, DataDog and Nagios, ensuring security compliance and proactive issue resolution.
- ❖ Implemented data backup and disaster recovery strategies using EBS snapshots, S3, and AWS Backup, ensuring business continuity.
- ❖ Set up Prometheus and Grafana for real-time infrastructure and application monitoring, tracking key metrics and performance trends.
- ❖ Installed, configured, and managed DevOps tools in Linux environments, including Git, Jenkins, Docker, Ansible, Kubernetes, Nagios, SonarQube, and Trivy, ensuring seamless CI/CD automation.
- ❖ Designed and maintained networking architectures using VPC, Subnets, NAT, Route Tables, Internet Gateway (IGW), and API Gateway, enabling secure multi-region deployments.
- ❖ Automated IAM policies, roles, and security groups to enforce least privilege access and enhance cloud security.
- ❖ Troubleshoot AWS infrastructure, networking, and application issues, ensuring minimal downtime, and optimized performance.
- ❖ Strong expertise in Linux administration, including user management, permissions, file systems, and package management.
