JOB OBJECTIVE

Seeking a challenging role with **5 years** of experience in both **Automation and Manual Testing**, specializing in the industrial and banking domains also certified from **Q-spiders** Bangalore. Proficient in a wide range of automation tools and frameworks, I aim to drive efficiency, improve quality, and streamline processes and committed to delivering precise and efficient testing solutions to ensure product quality and customer satisfaction in a dynamic and forward-thinking organization.

WORK EXPERIENCE

1. Software Engineer, Oct 2018 – Aug 2021
Utthunga Technologies Pvt Ltd
2. Analyst in Automation Testing – Aug 2021 – Present
JPMorgan Chase & Co.

PROFILE SUMMARY

Automation:

Automation professional with a proven track record in developing versatile automation solutions. Specializing in the creation of **Hybrid frameworks** with excel in data-driven and keyword-driven approaches, ensuring robust and scalable automation testing processes.

Key Automation Competencies:

- **Hybrid Framework Development:** Proficient in designing and implementing hybrid frameworks that combine data and keyword-driven methodologies for efficient test automation.
- **Collaborative Development:** Collaborate seamlessly with developers to create automation testing scripts using a diverse technology stack, including Robot Framework, Pytest, Python, Selenium, WebDriver, JavaScript, VBScript, Pandas, Tkinter, openpyxl, REST Assured API, SQL, Jira, and Git version control.
- **Agile Environment:** Experienced in working within Agile methodology environments, facilitating continuous integration and delivery to meet project goals.
- **API Automation:** Proficient in creating automation modules using REST Assured API and Google OAuth 2.0, ensuring comprehensive test coverage across various layers.
- **Requirements Management:** Skilled in the requirement collection phase, ensuring a clear understanding of project objectives and alignment with testing efforts.
- **Build, Deployment, and Maintenance:** Strong knowledge of the build and deployment process, along with proactive maintenance strategies to ensure automation solutions remain effective and up-to-date.
- **Analytical and Organizational Skills:** Possess strong analytical and organizational abilities, enabling effective test planning, execution, and defect tracking.

- **Effective Communication:** Excellent written and oral communication skills, facilitating collaboration with cross-functional teams and the clear conveyance of complex technical information.

With a dedication to quality and efficiency, I am committed to delivering automation solutions that streamline testing processes, improve product quality, and contribute to the overall success of the organization projects.

Manual Test:

Professionally adept in manual testing, I bring a wealth of experience and expertise to ensure software quality throughout its lifecycle. My background encompasses a strong understanding of both the **Software Development Life Cycle (SDLC)** and the **Testing Life Cycle (STLC)**, allowing me to effectively contribute to various stages of project development.

Key Competencies:

- **Manual Testing Expertise:** Possess extensive knowledge in manual testing techniques, including Test Plan creation, Test Case design, Test Case review templates, and traceability matrix development.
- **Comprehensive Testing:** Proficient in functional testing, integration testing, and system testing, ensuring software functionality, reliability, and robustness.
- **Specialized Testing:** Well-versed in smoke testing, regression testing, and compatibility testing to identify issues and maintain software stability.
- **Exploratory and Specialized Testing:** Thorough knowledge of adhoc testing, acceptance testing, I18N testing, and L10N testing, ensuring comprehensive coverage across various testing domains.
- **Defect Management:** Proficient in the defect tracking cycle, from identification to resolution, ensuring issues are efficiently addressed.
- **Test Case Development:** Hands-on experience in writing clear and effective test cases that provide comprehensive test coverage.
- **Test Case Review:** A good understanding of the test case review process, ensuring quality standards are met.
- **Agile Proficiency:** Strong knowledge of Agile processes, particularly Scrum, with experience in sprint planning meetings, sprint retrospective meetings, and bug triage meetings.
- **Agile Artifacts:** Familiar with Agile artifacts such as EPIC, Stories, and Story Points, and adept at using burn-up and burn-down charts to track project progress.

With a commitment to meticulous testing, I ensure that software meets or exceeds user expectations, contributing to the successful delivery of high-quality software products

SKILL SET

- **Programming Languages:** VB Script, Java Script, C, Tkinter, Python, SQL.
- **Automation Frameworks:** Robot Framework, Pytest, Selenium WebDriver.
- **API Testing:** REST API.
- **Automation Tools:** Test Complete, PyCharm, IntelliJ, Alteryx, Tableau.
- **Manual Testing Tools:** Jira, Jama, Confluence, Redmine.
- **Version Control:** GitHub, Bitbucket, SVN.
- **Database:** Tera Data.

Project 1: CM360 Automation (US clients)

Description

The project involves the development of a tool aimed at simplifying the process of creating programmatic campaigns within the CM360 (Campaign Manager 360) tool. This tool leverages media sheet data and integrates with the backend DFA (DoubleClick for Advertisers) API (Application Programming Interface) to automate the campaign creation process.

Roles & Responsibility:

- Gather and analyze project requirements and Develop project timelines and Ensure project adherence to timelines.
- Coordinate team and stakeholder communication.
- Used **Python** for project development and Implemented features with clean, maintainable code.
- Developed the graphical user interface (GUI) window for user input using **TKinter**.
- Conducted code reviews, debugging, and optimization.
- Retrieved data using **Google DFA API and OAuth 2.0**.
- Developed and automated test cases and Executed project with Robot Framework.
- Conducted system and integration testing and analyzed and report test results.
- Created comprehensive test plans and cases along with flowcharts.
- Identified and report bugs and fixed it.
- Executed regression testing and supported for continuous integration.
- Managed project deployment and configurations

Project 2: One Wireless Automation

Description

- One wireless application network is the most powerful and the only industrial wireless network on the market with capabilities for supporting ISA100 Wireless (IEC 62734).
- Wireless HART (IEC 62591) and Wi-Fi devices on one end-to-end redundant, scalable and cyber secure network.
- Wireless technology allows seamless extension of the process control network into the field.

Roles & Responsibility

- Development of methods using python for test cases according to the coding guidelines.
- Unit Testing and debugging for methods.
- Development of framework using tkinter for front end UI development and python for backend development.
- Development of methods by fetching the dynamic id for test cases.
- Conversion of build into batch files, installation of packages without internet connection.
- Integration with framework and execution.
- Manual Testing of Onewireless Application modules.
- Implementation of parameters fetching from the excel file.
- Customer interaction and demo.

Project 3: Paid Search Id (US Clients)

Description

The project involves the development of a tool designed to streamline the process of updating various spreadsheets within a launch document by leveraging data exported from Google or a Google-based source.

Roles & Responsibility

- Gathered and analyze project requirements and Ensure project adherence to timelines.
- Coordinated with team and stakeholder communication and developed the graphical user interface (GUI) window for user input using **TKinter**.
- Use **Python, pandas and openpyxl** for project development.
- Identified and report bugs and involved in debugging, and optimization and Execute projects with Robot Framework.
- Created comprehensive test plans and cases and conducted system and integration testing and analyzed and report test results.
- Maintained and enhance test automation and Tested tool for functionality, usability, and performance.
- Manage project deployment and configurations

Project 4: Maxpro Automation

Description

- Max pro vms (video management system) controls multiple sources of video subsystems to collect, manage and present video in a clear and concise manner.
- Max pro vms intelligently determines the capabilities of each subsystem across various sites, allowing video management of analog or digital video devices through a unified configuration and viewer.
- Users can benefit from using traditional analog systems and ip-network systems at the same time to ensure maximum use of their initial investments.

Roles & Responsibility

- Developed the vb scripts.
- Daily execution of test cases through framework.
- Testing keywords and debugging.
- Giving Demo for Client's

Project 5: DTM Automation

Description

- A device dtm (device type manager) is similar to a device driver (like the driver used to set up a new printer).
- The dtm includes a rich and user-friendly graphical interface to make device configuration, maintenance, diagnostics and troubleshooting fast and easy.

- The simple and clear user interface standardizes the training required to configure an intelligent field device — reducing set-up time and potentially reducing configuration errors.

Roles & Responsibility

- Developing the java scripts.
- Daily execution of test cases through framework.
- Testing keywords and debugging.
- Giving Demo for Client's

Project 6: Smart Graphics

Description

- The tool supports the workspace creation for each of the projects, which may comprise large number of NW or GUS.
- The tool shall convert the static part of both NW (DS file) and GUS graphics (PCT file) into their HMI equivalents
- The tool shall identify all the objects in the source files and their placement and translate

Roles & Responsibility

- Testing pct file as per the requirements
- Creating the test cases.
- Importing the test cases in jama.

PERSONAL DETAILS

Name: Ambika

Date of Birth: 01/06/1995

Languages known: Kannada, English, **Permanent Address:** shivaji nagar, kanakagiri, Karnataka.

EDUCATIONAL QUALIFICATIONS

- B.E (E&C Engineering) from VTU, Belgaum, in 2018 with **75%**.
- Class 12th from Karnataka Pre-University Board, in 2014 with **67%**.
- SSLC from Karnataka Secondary Education Examination Board, in 2012 with **81%**.

Declaration

I do hereby declare that the information furnished above is true to the best of my knowledge and belief.

Place: Bangalore
