- **B.E Project - "E-RESULT" in Persistent Systems**
 - ✓ "E-RESULT" is basically a web based application about handling patient's health reports in co-ordination with preferred doctors, pathologists and patients and as its users.
 - ✓ Using patient's information like height, weight, lifestyle, medically significant habits, medical history, pathological reports etc. the system generates reports of patients to be visualized in different forms.
 - ✓ Data in database is used for predictive analysis of certain lifestyle diseases. This system also provides prediction analysis and automated alerts for preventive actions in case of critical test results.
