PROFESSIONAL SYNOPSIS

To leverage my 8.8 years of expertise in Software Testing, including Automation and Manual Testing, within an organization of international repute. I aim to continuously adapt to dynamic technology environments, contribute actively towards the organization's success, and drive innovative solutions through my skills and experience

PROFESSIONAL SKILLSET

- Automation Tools: **Playwright, Selenium,**
- Programming Languages: **Java, JavaScript**
- Test Management Tools: **JIRA**
- Version Control: Git, GitHub, GitLab, Bitbucket
- Frameworks: Data-Driven, Behavior-Driven Development (BDD) with Cucumber, TestNG
- CI/CD Tools: Jenkins
- APIs: API testing using Postman
- Agile Methodology: Scrum
- Manual testing: Functional, API, Accessibility, Analytical testing

EDUCATION:

Bachelor of Engineering (B.E.) in Electronics and Communication Engineering
Visvesvaraya Technological University (VTU), Karnataka
Year of Graduation: 2013

PROFESSIONAL EXPERIENCE

Sonata software	Senior Automation Engineer	Jan-2022 to Present
-----------------	----------------------------	---------------------

Client: TUI Group

Project: TUI Group Tourism Platform

Technologies: Playwright and javascript

Duration: Nov-2023 –Present

Description

Developed and maintained automation frameworks using Playwright and JavaScript for TUI Group's global tourism platform, enhancing test coverage and efficiency. It offers a wide range of services, including hotels, cruises, airlines, and travel agencies to ensure the smooth functionality and reliability of web applications supporting tourism operations worldwide.

Project: TUI Group Tourism Platform

Technologies: Selenium, Java, Cucumber, TestNG, Jenkins

Duration: Jan-2022 – Dec-2023

Description:

Automated test cases for TUI Group's global tourism platform. It offers a wide range of services, including hotels, cruises, airlines, and travel agencies to ensure the smooth functionality and reliability of web applications supporting tourism operations worldwide.

Responsibilities:

- Creation of Test cases.
- Adding Manual Test cases to the Automation suite.
- Worked on Analyzing the client framework and implementing to the existing Automation scripts.

- Performed functional, regression, and API testing.
- Collaborated with cross-functional teams to resolve issues and optimize platform performance.
- Participated in Agile processes

Professional Achievements

Received Certification of Appreciation from client [TUI]

Enterprise SoftLabs Pvt. Ltd

Automation Engineer

Sep-2020 to Dec 2021

Client: Accenture

Project : WMAP

Technologies: Selenium, Core Java, Cucumber, TestNG

Description:

WMAP is a legacy platform for the wealth management business of UBS, operational for over 30 years. Due to its complex nature and outdated technology, the bank faces challenges in market agility and high maintenance costs. The project focuses on enhancing automation to support the platform's modernization.

Responsibilities:

- Developed functional and GUI test cases and executed them.
- Created automation scripts using Selenium WebDriver and Cucumber.
- Participated in Scrum calls, sprint planning, and retrospective meetings.
- Executed test cases as per schedule, identified bugs, and updated the status.
- Provided daily test status reports to the development team.
- Responsible for selecting test cases and developing the Page Object Model (POM).
- Reviewed and executed automation scripts and analyzed results.
- Involved in code reviews and framework execution.

GI Group

Test Engineer

Oct-2016 to Sep-2020

Project Name: Consumer Care Platform (CCP)

Client: Huawei

Testing Type: Automation Testing

Technologies Used: Selenium, Core Java, Cucumber, TestNG

Duration: Oct 2017 – May 2020

Description:

The Consumer Care Platform (CCP) supports customer relationship management for a large telecom company, providing end-to-end services for repair, maintenance, settlement, and information query. It also collects data reports to assist business decisions.

Responsibilities:

- Executed test cases according to schedule, identified bugs, and updated status.
 - Created and maintained test scripts for product features.
 - Converted manual test cases to automation scripts using Selenium.
 - Performed functional, system, and regression testing.
 - Collaborated with the development team by providing daily test status reports.
 - Developed Page Object Model (POM) framework and reviewed automation scripts.
 - Analyzed results and maintained automation frameworks for repeated execution.
-

Project Name: CSPM
Client: Huawei
Testing Type: Automation Testing
Role: Quality Engineer
Platform: Web Application
Duration: Oct 2016 – Sep 2017

Description:

The CSPM platform manages spare parts delivery and return channels for warehouses and service centers, handling stock management, inventory inquiry, transaction tracking, and credit management.

Responsibilities:

- Executed test cases as per the project schedule, reporting bugs and updates.
- Developed functional and regression test scenarios for product features.
- Automated test scripts using Selenium and Java frameworks.
- Maintained POM framework, ensuring test execution and script review.
- Collaborated with cross-functional teams to ensure smooth communication and reporting

Indeotecnologias Pvt Ltd.	Quality Engineer	Sep- 2015 to Sep-2016
----------------------------------	-------------------------	------------------------------

Project: Integrated Manufacturing System

Testing Type: Manual Testing

Duration: Sep 2015 – Sep 2016

Description:

The Integrated Manufacturing System is a platform used in the automobile industry to streamline manufacturing operations based on daily sales updates from dealers. The system facilitates communication between manufacturers, dealers, suppliers, and company administration for managing quotations, production orders, and supply chain logistics. The project involved ensuring the platform's functionality in managing these end-to-end operations.

Responsibilities

- Participated in the preparation of the test cases as per the requirements.
- Executed the test cases in different testing stages like smoke testing, functional testing, re-testing, sanity testing, and regression testing.
- Involved in writing test case for the product features.
- Performing functional, system testing and regression testing.
- Executed the test cases as per schedule, bug detecting and updating the status.
- Involved in sending test status report to dev team on daily basis.
- Performed manual functional testing and constructed positive and negative test scenarios as per requirements.
- Performed End-to-End testing manually and was associated with User Acceptance Testing.
- Involved in writing test summary reports, defect summary report, and final report.
