

Name : Rajasekhara Reddy

Email : rajshekhara550@gmail.com

Mobile: 9550609795

CAREER OBJECTIVE

Seeking an opportunity to work with a dynamic organization and involve in an organization offering the opportunity to utilize my experience, education and skills towards achieving organizational objectives and to work in an innovative and competitive world.

SUMMARY

- Hands on Experience in Microsoft Fabric,Azure Data Factory,Azure Data Bricks,Azure Synapse,Azure Analysis Services,Pyspark,Kafka,Scala,SQL, TSQL,Performance Tuning,Indexex,Stored Procedures,Functions,CTE,Temp tables,TSQL Table Variables,Windows Functions,Joins,Triggers,Cursor,Partitions,Execution Plan
- Hands on Experience in Microsoft Fabric,Power BI,Power apps,Power Automate,Azure Data Engineer,Tableau.
- Expertise in OLTP,OLAP,ER,Dimensions,Facts,Star Schema,Snowflake,Datamart
- Expertise in SSIS,SSAS,SSRS,SSMS
- Hands on Experience in Azure Blob,Datalake,Synapse,DataBricks,Analysis Services,SQL DWH,Azure Devops,Datafactory,Spark,Scala,Python,R
- Extensively Worked in Power BI Desktop,Power Query Editor,DAX,M,Model,Visuals,Service,Server,Report Builder,Power Apps,Power Automation
- Actively involved in Scrum,Agile,SLA,Version one,Remedy,Sprint,story board
- Expertise in DAX,MDX,Python,SQL,TSQL,Power Shell,C#.
- Migrated Azure Synapse Notebooks, Spark pools, Configurations, Pipelines & Hive Metastore metadata to Microsoft Fabric
- Created Microsoft Fabric Lakehouse and Delta Lake tables, Environments, Notebooks.
- Configured Microsoft Fabric Runtime, compute and Workspace roles in Lakehouse
- Created Shortcuts in Lakehouse, Configured Spark Structured streaming using eventstreams and used Copilot in Fabric Notebooks
- Configured Fabric Onelake, ADF Pipelines, Data Engineering, DWH, Data science, Realtime Analytics using Copilot
- Created Real time Intelligence using KQL & Reflex and Consumed in Power BI to create Realtime Dashboards.
- Created Power BI Semantic Models with incremental refresh using M &Dax Expressions, Custom & Embedded visuals
- Configured RLS & Object level Security, Workspace, Gateways, Apps, Deployment Pipelines, Dataflows, Alerts
- Created Canvas and Model driven Apps using Dataverse, Fx Expressions & Write back to Database, Process mining
- Deployed Power apps, Business Flows, automate flows using Solutions integrated with Responsible AI, Chatbots, Co-Pilot
- Configured ALM, Workflows, Power pages, Dynamics 365, Custom connectors, Power platform admin center
- Connected to Data sources using joins and Data blending, created Worksheets, Lods, Mapping, Calculation, Visuals with Cosmetics

- Created Dashboards, Stories, RLS, Published to Tableau server, Collaboration & Deploy, Migrated Tableau reports to Power BI
- Created Snowflake repository, Warehouse, Schema, Table, View, Materialized view, Snowpipe
- Used Snowflake DBT for Data Transformations, Version Control, Collaboration, Data modeling, Data Lineage, Connectors
- Migrated on-premises sql server to Azure sql, Lift and Shift of SSIS Pkgs, Deploying Tabular models in Azure Analysis services
- Implemented Medallion Arch across Bronze, Silver and Gold Layers Using ADF, ADLS, ADB, Delta tables, Delta live tables, Lakehouse, Azure sql db, AAS
-
- Extensively used Python Libraries such as Flask, Pytorch, TensorFlow, Pandas, NumPy, Scikit-Learn in Creating Azure Functions, Azure web apps, Azure Virtual Machines, ADB Notebooks, Azure ML and accessing data from Azure Data lake
- Created Dataframes, RDD, Datasets using Spark & SQL Context using PySpark using pyspark.sql

PROFESSIONAL SNAPSHOT

- ♦ Currently working with Sigma Software as Data Engineer from November 2019 -till date

PRIMARY SKILL SET

BI Tools : SSIS, SSAS and SSRS, Power BI, Microsoft Fabric
Azure Services : Azure Data factory, Azure Data lake, Azure data bricks, Azure Analysis Services
Databases : SQL Server Management Studio and Azure Data Lake
Database Languages : SQL, DAX and MDX scripting.
Power Platform. : Power BI Desktop, Power BI Service, Power Apps, Power Automation

PROJECTS EXPERIENCE

1. OSN, Dubai, UAE

Main perspective was to migrate from On-Premise platform to Cloud Platform, Experience working in Azure analysis tabular model and Power BI, Experience working in DAX for both AAS and Power BI, Working experience in both Azure Data Factory V1 and V2, Azure Data Lake Store Gen1, Azure Analysis Services, Experienced in Retail knowledge domain, Experience in SDLC process, agile methodologies, Good Knowledge in Data-warehousing and ETL concepts, Experience in Analyzing and automating the operations process, Effective communicator, with good communication/management skills, Good interpersonal skills, commitment, results oriented, smart & hard working with a quest and zeal to learn new technologies.

Created Onelake to store heterogenous data sources, Created ADF Pipelines to load data into Datalake, Created and activated Data Activator rules to identify changes in pattern of data, Create Data Activator alerts for a Real-Time Dashboard, Ingested data into Fabric Datalakehouse, Developing and optimizing queries and stored procedures to extract insights from data stored in Snowflake, Collaborating with data analysts, data scientists, and business stakeholders to understand data requirements and design appropriate data solutions, Ensuring data quality, consistency, and accuracy across Snowflake databases, Monitoring and optimizing Snowflake performance to ensure efficient data processing and query execution. Implementing security and access controls to protect sensitive data stored in Snowflake.

Client : OSN, Dubai

Technology Used : Azure Datafactory, Azure data lake, Azure data bricks, SSIS, SSAS, SSRS

Role : BI Developer

Duration : December 2023 – Till date

2. DebitIt - CarryLoans Financial Services

CarryLoans is a loan market place which brings different types of lenders and borrowers under one roof/platform. A model to purge the existing inefficiencies in the credit/loan sector and create perfect market conditions. Instead of borrower approaching banks, interested banks will approach the borrower in a cost effective & efficient manner

Loaded data to Fabric Database using Fabric dataflows & Pipelines, Used Apache Airflow job to run in Data pipelines, Created Lakehouse, SQL analytics endpoint, Schemas and managed lakehouse deployment pipelines and REST API, Configured Fabric Onelake, ADF Pipelines, Data Engineering, DWH, Data science, Realtime Analytics using Copilot, Created Real time Intelligence using KQL & Reflex and Consumed in Power BI to create Realtime Dashboards.

Architecting and implementing Snowflake data warehouses, data lakes, and data pipelines to support business requirements, Designing and developing ETL (Extract, Transform, Load) processes to move data into and out of Snowflake, Creating and managing databases, tables, views, and other database objects in Snowflake. Created Power BI Datasets, Dashboards and Embedded into Client Applications, Created Transformations using M in Power Query Editor and used DAX for Calculated Columns & Measures, Applied Python & R Transforms in Datasets in Power bi and applied RLS & OLS, Created Canvas and Model Driven apps and Power Virtual Agents, Created Automated Cloud and Scheduled Flows using Power Automate

Experience in Azure hive activity, copy activity, U-SQL (data lake activity) and stored procedure activity, Azure data lake activities, Azure analysis tabular model, Experience in working with Azure PAAS data platform (Azure Data Factory, Azure Analysis Services, Azure HDINSIGHT, Azure blob storage, Azure data lake, Azure SQL DWH, Azure SQL DB, Azure Automation, Azure Cognitive Intelligence, Azure Log Analytics, Azure Search and Azure Cosmos DB), Good Knowledge in SQL Server 2012, 2014, 2016 and 2017 along with stored procedures and SQL queries. Experience in SDLC process, agile methodologies, Good Knowledge in Data-warehousing and ETL concepts,

Experience in Analyzing and automating the operations process, Effective communicator, with good communication/management skills.

Client : CarryLoans Financial Services

Technology Used : Azure Datafactory, Azure data lake, Azure data bricks. SQL/T-SQL, SSIS, Power BI, SSAS

Role : BI Developer

Duration : January 2023 – November 2023

3. COMPASS: - BNP Paribas India Solutions

Compass system is a centralized data warehouse to get the insight behavior of the different systems which are integrated with compass. The Compass system is integrated with deal capture systems (Bonds, Scan, CC, Cds, Credit, Dimensions, FXLM, OneTick, Rates, and Revenue), PnL and External System (Dtc, Trace and etc). For each Application the Source data will be available in the different formats like text file, CSV File, Oracle and SQL server. Created Power BI Semantic Models with incremental refresh using M & Dax Expressions, Custom & Embedded visuals, Configured RLS & Object level Security, Workspace, Gateways, Apps, Deployment Pipelines, Dataflows, Alerts, Migrated on-premises sql server to Azure sql, Lift and Shift of SSIS Pkgs, Deploying Tabular models in Azure Analysis services, Implemented Medallion Arch across Bronze, Silver and Gold Layers Using ADF, ADLS, ADB, Delta tables, Delta live tables, Lakehouse, Azure sql db, AAS, Configured Event Grid, IoT Hub, Cosmosdb, Functions, HDInsight, Synapse Analytics for Bigdata and realtime data Processing.

The source data have been loaded into staging and from the staging data has been migrated to final data warehouse compass system. Data warehouse data has been processed into OLAP cube post to the successful data load of data warehouse. From the data warehouse system and OLAP the meaningful and useful information and then presenting the information using a user-friendly and powerful reporting in the form of Tablix reports, Dashboards and give analytical reports using Tableau reporting tool for the management staff at various levels.

Client : BNP Paribas

Technology Used : SSIS, SSAS, SQL Server, SQL/T-SQL, MDX, Power BI

Role : Developer

Duration : November 2021 – December 2022

4. RECKITT DASHBOARD : - Blue Ocean Market Intelligence

YouGov group is an authoritative to measure of public opinion and consumer behavior. They supply a live stream of continuous, accurate data and insight into what people are thinking and doing all over the world, all of the time, so that companies, governments and institutions can better serve the people that sustain them. The survey data is in the form an Excel. In the project, the survey data has been transformed into data warehouse destination which is present in the SQL server management studio then followed by OLAP cube has been processed, Created Optimized Complex SSIS Pkgs with Script Components and Deployed and Scheduled with Incremental refresh, Created SSRS Drill through, Drill down, Cascading Parameter reports using Report builder with Shared and Embedded Datasets and Scheduled and Configured Custom Assemblies and Data Driven Subscriptions and Migrated to Power BI Reports, Created Multidimensional (MDX) Models with Hierarchies & Aggregations and Deployed and Consumed in Power BI, Created Tabular Model Models and used DAX for RLS, Calculated measures and Migrated to Azure Analysis Services

Using the data warehouse system and from OLAP cube data, get the meaningful and useful information and then presenting the information using a user-friendly and powerful reporting in the form of Tablix reports, Dashboards reports and give analytical tool to the management staff at various levels, ranging from country to region and corporate level, for the purposes of efficient and effective operation management and decision making. Created Custom Visuals using Power BI SDK, Configured CI/CD Pipelines for Deploying Power Platform assets from one environment to another Environment, Configured Power BI Admin Activities such as Users, Workspaces, Appspaces, Licences Configuration, Deployment, Security & Auditing

Client : YouGov Group,

Technology Used : SSIS, SSAS, SSRS, SQL Server, SQL/T-SQL, MDX, Power BI

Role : Senior Developer

Duration : February 2021 – October 2021

5. SENSIBLE AUTO: - Blue Ocean Market Intelligence

Sensible Auto Lending gives consumers with real financing solutions to purchase quality pre-owned automobiles, while also helping them establish or rehabilitate their credit to achieve the benefits of financial freedom. The data from XML sources which transforming into the SQL server database which is in the form meaningful and useful information for the business. Reports are presented in the form of tablix and dashboards which is useful for effective decision making and business operations.

Client : Sensible Auto,

Technology Used : SSIS, SSAS, SSRS, SQL Server, SQL/T-SQL

Role : BI Developer

Duration : April 2020- January 2021

6. AIG – ITSRC BI Reporting:-

AIG is one of the largest Insurance company in USA. As part of their Business Analytic and Reporting, they are using a BI System called “ITSRC BI” to provide the data to various business group information with in AIG. The data from Excel sources which transforming into the data warehouse system which convert into meaningful and useful information and forms, and then presenting the information using a user-friendly and powerful reporting and analytical tool to the management staff at various levels, ranging from country to region and corporate level, for the purposes of efficient and effective operation management and decision making.

Client : AIG Insurance

Technology Used: SSIS, SSAS, SSRS, SQL Server, SQL/T-SQL, MDX

Role : Software Engg

Duration : November 2019 – March 2020

TRAININGS ATTENDED:

- Azure Data Engineering
- Python & R
- Spark & Scala

CERTIFICATIONS:

- Microsoft Power BI Data Analyst
- Microsoft Azure Fundamentals
