

RAJATH M

Mobile: [+91-9632545645](tel:+91-9632545645)

Mail: mrajath98@gmail.com

Professional Summary:

- Having **4.1** years of experience in all aspects of Design and Development using **Python, Flask** and **Django** to build web applications.
- Experience in Cloud technologies like **AWS**, services use dares **EC2, ECS, Lambda, S3, API Gateway**.
- Having incredibly good implementation knowledge of OOPS concepts, Exception handling etc.,
- Good experience with **multiple frameworks** like **Django and Flask**.
- Developing applications in **MVC, MVT** architecture using **Flask and Django** framework.
- Expertise in database technologies such as **MySQL, PostgreSQL and MongoDB**.
- Experience with Web Development, **Python and the Django framework**.
- Experienced in developing web-based applications using **Python, Django, CSS, HTML, jQuery, Bootstrap**.
- Hands-on experience in working with **Python ORM** libraries including **Django ORM and SQL Alchemy**.
- Responsible for debugging and troubleshooting web application.
- Hands-on Experience in using **VSCode** and **PyCharm IDE** for developing software applications.
- A dedicated team player with excellent organizational and interpersonal skills.
- Expertise in Python libraries like **NumPy** and **Pandas**.

Experience Details:

- Working as **Software Engineer at Mouri Tech, Bangalore** from 10th May 2022 to Aug 30th 2024.
- Worked as **Software Associate at Accion Labs, Bangalore** from 4th June 2020 to 6th May 2022.

Education:

- Dayananda Sagar College of Engineering (2016 – 2020)
Bachelor of Engineering in Industrial Engineering & Management First Class with Distinction – 8.63 CGPA

Technical Skills:

Language	Python
Operating Systems	Windows,Linux
Frameworks	Django, Flask, RestAPI.
Database Servers	MYSQL, PostgreSQL and MongoDB
Tools	Postman, Bitbucket, Docker, GIT and RabbitMQ
IDE's	PyCharm, Visual Code and Jupyter Notebook
Other Tools	WinSCP, Putty, Jira, Bamboo, Docker, Agile, Scrum

Project Details:

PROJECT-2:

Project :Global Integrated Order Management System

Technologies : Python, Django, MySQL, GIT, Docker Linux, Jira, Bamboo, Bitbucket

Description:

The Integrated Order Management System (GIOM)is a comprehensive web-based application designed to enhance broadband service functionalities. This dynamic system seamlessly facilitates essential tasks such as order processing, billing management, and service provisioning. The project's core objectives to streamline the process of handling diverse orders originating from various external systems. GIOM aims to centralize and standardize the management of orders, providing a unified platform for efficient order processing and service delivery.

Responsibilities:

- By using Python on Django Web Frame work designed backend and created database schema to represent and support business.
- Developing view sand templates with Python and Django's view controller and template language to create a user-friendly website interface.
- Involved in building database Models, APIs, and visualizing Python to build an interactive web-based solution.
- Creating Business Logic using Python to create planning and tracking functions.
- Involved in code reviews and code refactoring in the peer-to-peer review process.
- Working with MySQL database on simple queries and writing Stored Procedures for normalization.
- Django APIs to access the database by using Python Django Template developed the customer service.

PROJECT-1:**Project** : AvMed's**Technologies** : Python, Django, RESTAPI, GIT, Docker, Bitbucket, Agile, Scrum, Linux, MySQL, HTML, CSS**Description:**

AvMed's commitment to fostering healthier lives and providing exceptional member services through a web portal called "AvMed.org. By delivering quality, cost-effective plans and exceptional member services, we fulfilled the vision of becoming the trusted health partner for our members throughout their lives. Leveraging a range of advanced technologies, including Python and Django for backend functionality, REST API for seamless data communication and Git for efficient version control and collaboration ensured a robust and user-centric experience. Operating within a Linux environment, we prioritized stability and security, while MySQL to data storage and retrieval. The frontend interface, crafted using ReactJS, HTML, and CSS, seamlessly merged functionality and design, resulting in an intuitive and visually appealing member experience.

Responsibilities:

- Designed the web Application using Python on Django web framework pattern to make it extensible and flexible.
- Designed and analyzed the site map for the web portal to be developed.
- Interacted with clients to discuss requirements and involved in technical, functional analysis.
- Implemented unit tests for the code in test-driven development using agile, scrum methodologies.
- Implemented Restful API from the server side.
- Integrated with the front-end existing Python-based backend to enable real- time data updates and improved performance.
- Developed responsiveReactJScomponentsfordatavisualizationandinteractiveuser interfaces.
- Involvedincodereviewsandcoderefactoringinthepeer-to-peerreviewprocess.

Declaration:

I hereby declare that the above information is true to the best of my knowledge and no misinterpretation is done.
