Yuvarani N
Software Engineer, Machine Learning
Data Science Department

SUMMARY

Overall, 5 years of software development experience with **data science** professional and data -driven analyst with the ability to apply ML techniques and leverage algorithms to solve real-world business problems. Established ability in deploying effective predictive models and deliver proven results.

TECHNICAL SKILLS

Languages: **Python**, Java

Databases: MySQL, Hive DB, MSSQL

Visualization: Tableau

DevOps: **Docker**, **GitHub**, **Jenkins** CI/CD

IDE: PyCharm, Jupyter Notebook, Eclipse

Packages: Scikit-Learn, **Numpy**, SciPy, **Pandas**, NLTK, Matplotlib, Seaborn.

Frameworks: Keras, TensorFlow, Selenium, Flask.

PROFESSIONAL EXPERIENCE

Software Engineer, Machine Learning & AI

Jul'19 - Present

Gartner India Research and Advisory pvt ltd.

Project: Talent Neuron Recruit and Plan

Project description: Talent Neuron Recruit is a web application developed by Gartner to provide the data analysis advice related to the location-based job openings and candidate's availability.

Responsibilities:

- Building the machine learning models to solve the business problem and requirements.
- Understanding the business problems and requirements.
- Gathering the required data and cleaning them.
- Understanding the agile process and improvising model change in each sprint.
- Tuning the models to achieve the better accuracy scores.
- Documenting the process of building the model and the insights found from the data and explain to the management.
- Deploying the model and monitoring the performance in the production environment.

• Title Prediction Project:

- Developed **ML** model to find the listing elements such as job title, job area, job type or company name.
- Picked the required data collections from MySQL DB and performed data cleaning process.
- Applied NLP techniques such as tokenizing the data removing outliers and vectorizing the data.
- Applied various supervised machine learning algorithms such as LogisticRegression, DecisionTreeClassifier, SVC, RandomForestClassifier and selected the best model based on the different accuracy metrics.
- Performed Hyper parameter Tuning to achieve the better performance of the model.
- Deployed the model to the production via Jenkin with docker container.

♦ **Web Page Classifier:**

- Developed a multi class classification model to find the type of given url along with the corresponding ATS name such as ats_name_listing/ats_name_posting.
- Collected various url samples from the MySQL DB and applied various cleaning process and NLP techniques.
- Trained the model with different machine learning algorithms such as LogisticRegression, DecisionTreeClassifier, RandomForestClassifier, SVC, AdaBoostClassifier and GradientBoostingClassifier and selected the best model based on the different accuracy metrics. Applied hyper parameter tuning process to get the better accuracy and deployed the model to the production.

POC Projects:

- Developed a model for the e-retail factors for customer activation and retention. It is a case study from Indian e-commerce customers. Created a detailed document and presentation for the EDA insights.
- Applied various machine learning techniques to build the classification model to predict the defaulters in the telecom industry for an organization Microfinance Institution.
- Developed a model to predict the used car prices by applying machine learning preprocessing pipelines and algorithms. Scraped the required data by designing the web scraping scripts using **python** and selenium.
- Designed the machine learning model and done detailed EDA to find the Attrition in HR for the IBM HR analytics data.

Software Engineer

Mar'17 - Jul'19

Gartner India Research and Advisory pvt ltd.

- Developed and maintained the web scraping scripts to scrape the job data from public websites of corporates and job boards.
- Used agile development methodology to develop internal application using java and selenium to find the new sources of the data from the third-party feed.
- Automated the web scraping process by designing automated and robust template for the sources with ATS (Applicant Tracking System), which will help to use the single automated template to scrape the data from different sources.
- Collaborated with research and QA team to ensure the quality of the data been scrapped.

KEY SKILLS

- **Data Science**
- **ML Algorithms**
- Predictive Analysis
- Natural Language Processing
- Data Visualization
- Data Analytics
- Web scraping
- Model Development

EDUCATION

B. E in Computer Science - Aug'10 - Apr'14

Vivekananda Institute

CERTIFICATIONS

- Done certification on Neural Networks and Deep Learning in Coursera.
- Done certification on Improving Deep Neural Networks: Hyperparameter tuning, Regularization and Optimization in Coursera.
- Done certification on Structuring Machine Learning Projects in Coursera.
- Completed Machine Learning course in Coursera.
- Done certification on Applied Machine Learning with Python from IBM.
- Completed certification on PG Program in Data Science, Machine Learning Neural Networks from the institute Data Trained.
